2001-03	<u>TPMS Reset - Procedure 1</u>

TPMS RESET - PROCEDURE 1

1. Set the tire pressure on all wheels to specification.
2. Turn ignition switch to ON position, with engine off.
3. Press reset button (for no longer than 10 seconds) until tire pressure warning light illuminates Yellow for a few seconds. See **Fig. 9**, **Fig. 10**, **Fig. 11** or **Fig. 12** .

NOTE: **On some X5 models, the reset button is marked "RDC".**

4. Drive vehicle. Initialization is automatically completed during the drive, without any feedback issued.

G00251683

Courtesy of BMW OF NORTH AMERICA, INC.

G00251684

Fig. 12: Locating TPM System Reset Button (Z28)
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: The initialization finishes during driving, which can be interrupted at any time. When driving resumes, the initialization is continued automatically.

1. Set the tire pressure of all wheels to specification.
2. Start engine, but do not start driving.
3. On Control Center, select "RPA" from the "SETTINGS" menu and confirm selection. The initialization menu will appear. See **Fig. 13**.
4. Select "SET" and confirm selection.
5. Drive vehicle. The message "FTM IS BEING INITIALIZED" will be displayed. See **Fig. 14**.

NOTE: It takes at least 10 minutes before the TPM system can detect and report a flat tire.

6. Select counterclockwise left arrow button and confirm to exit from menu.

Fig. 13: Identifying TPM System Reinitialization Messages (1 Of 2)
Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 14: Identifying TPM System Reinitialization Messages (2 Of 2)
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: The initialization finishes during driving, which can be interrupted at any time. When driving resumes, the initialization is continued automatically.

1. Set the tire pressure of all wheels to specification.
2. Start the engine.
3. Press iDrive knob down once to enter Vehicle Info.
4. Select Settings.
5. Select Vehicle Tires.
6. Select TPM.
7. Select Reset.
8. Scroll to Yes.
9. Select "YES" and press the controller.
10. After selecting Yes, drive vehicle until tires on iDrive screen turn green.

TPMS RESET - PROCEDURE 4

NOTE: The initialization finishes during driving, which can be interrupted at any time. When driving resumes, the initialization is continued automatically.

1. Set the tire pressure of all wheels to specification.
2. Press "MENU" button to open start menu.
3. Open the i-menu of the Control Center.
4. Select "SETTINGS" and press the controller.
5. Select "VEHICLE" and press the controller. See **Fig. 15**.
6. Select "TIRES: TPM" and press controller.
7. Start engine, but do not start driving.
8. Select "RESET" and press the controller.
9. Select "YES" and press the controller.
10. Drive vehicle. The message "RESETTING TPM...." will be displayed. Initialization is automatically completed during the drive. When initialization is complete, "STATUS: TPM ACTIVE" message will be displayed.

G00251686

Fig. 15: Identifying TPM System Reinitialization Messages
Courtesy of BMW OF NORTH AMERICA, INC.

TPMS RESET - PROCEDURE 5

CAUTION: When driving with snow chains or a space-saver spare tire, DO NOT initialize the system.

1. Set the tire pressure of all wheels to specification.
2. Start engine, but do not start driving.
3. Press reset button (for no longer than 10 seconds) until tire pressure warning light illuminates Yellow for a few seconds. See **Fig. 16**, **Fig. 17**, **Fig. 18** or **Fig. 19** .
4. Drive vehicle. Initialization is automatically completed during the drive, without any feedback issued.

TPMS RESET - PROCEDURE 6

Resetting TPM With iDrive

1. Set the tire pressure of all wheels to specification.
2. Turn ignition switch ON.
3. Press controller to call up I menu. See **Fig. 20**.
4. Select SETTINGS and press controller.
5. Select CAR/TIRES and press controller.
6. If necessary, switch to top field and select TIRES/RDC and press controller.
7. Start engine.
8. Select CONFIRM TIRE PRESSURE and press controller.
9. Drive vehicle. Initialization is automatically completed during the drive, without any feedback issued.

Fig. 20: Locating TPM System Reset Button (With iDrive)
Courtesy of BMW OF NORTH AMERICA, INC.

Resetting TPM Without iDrive

1. Set the tire pressure of all wheels to specification.
2. Start engine.
3. Move turn signal lever up or down until TPM warning symbol and RESET appears. See **Fig. 21**.
4. Press BC button on end of turn signal lever to confirm selection.
5. Press and hold BC button for approximately 5 seconds until a CHECK/TICK appears after RESET.
6. Drive vehicle. Initialization is automatically completed during the drive, without any feedback issued.

Fig. 21: Locating TPM System Reset Button (Without iDrive)
Courtesy of BMW OF NORTH AMERICA, INC.

TPMS RESET - PROCEDURE 7

With iDrive

Indirect System (Flat Tire Monitor)

CAUTION: Do not initialize the system while snow chains are attached.

NOTE: Each time a tire inflation pressure has been corrected or a wheel or tire has been changed, reset the system.

Initialization:

1. Using the iDrive MENU button, choose:
2. "Vehicle Info"
3. "Vehicle status"
4. "Reset"
5. Start the engine.
6. Start the initialization using "Reset". See **Fig. 22**.
7. Start to drive.

The initialization is completed during driving, which can be interrupted at any time. When driving resumes, the initialization is continued automatically.

Fig. 22: iDrive Showing Tire Monitor "Reset"
 Courtesy of BMW OF NORTH AMERICA, INC.

Checking FTM Status:

1. Using the iDrive MENU button, choose:
2. "Vehicle Info"
3. "Vehicle status"
4. "Flat Tire Monitor"
5. The status will be displayed. See **Fig. 23**.

Fig. 23: iDrive Showing Tire Monitor Status
 Courtesy of BMW OF NORTH AMERICA, INC.

Direct System (Tire Pressure Monitor)

NOTE: Each time a tire inflation pressure has been corrected or a wheel or tire has been changed, reset the system.

TPMS Status indicator on the Control Display:

The color of the tires represents the status of the tires and the system. TPM takes into account that tire pressures change while the vehicle is being driven. The tire pressures do not need to be corrected unless the TPM instructs you to do so by means of color indicators.

- **Green:** The tire inflation pressure corresponds to the established target value. "TPM active" appears on the Control Display.

- **One Wheel Yellow:** There is a flat tire or substantial loss of tire pressure in the indicated tire. A message appears on the Control Display.
- **All Wheels Yellow:** There is a flat tire or substantial loss of tire pressure in several tires. A message appears on the Control Display.
- **Gray:** The system cannot detect a puncture. Possible reasons for this:
 - TPM is being reset.
 - Temporary malfunction caused by systems or devices using the same radio frequency.
 - Malfunction.

Initialization (Reset):

1. Using the iDrive MENU button, choose:
2. "Vehicle Info"
3. "Vehicle status"
4. "Reset"
5. Start the engine.
6. Start the initialization using "Reset". See **Fig. 22**.
7. Start to drive.
8. The tires are shown in gray and "Resetting TPM..." is displayed.

After driving a few minutes, the set inflation pressures in the tires are accepted as the target values to be monitored. The system reset is completed during your drive, and can be interrupted at any time. When driving resumes, the reset is continued automatically. On the Control Display, the tires are shown in green and "TPM active" is displayed again.

IMPORTANT: If a flat tire is detected while the system is resetting and determining the inflation pressures, all tires on the Control Display are displayed in yellow. The message "Low tire!" is shown.

System Reset Failure:

- **Message For Unsuccessful System Reset:** The warning lamp lights up yellow. A message will appear on the Control Display. Check the tire inflation pressure and reset the system.
- **Malfunction:** The small warning lamp flashes in yellow and then lights up continuously; the larger warning lamp comes on in yellow. On the Control Display, the tires are shown in gray and a message appears. No punctures can be detected. This type of message is shown in the following situations:
 - If there is a malfunction. Have the system checked.
 - If a wheel without TPM electronics has been mounted.
 - If TPM is temporarily malfunctioning due to other systems or devices using the same radio frequency.

Without iDrive

Indirect System (Flat Tire Monitor)

CAUTION: Do not initialize the system while snow chains are attached.

NOTE: Each time a tire inflation pressure has been corrected or a wheel or tire has been changed, reset the system.

Reset:

1. Start the engine.
2. Lightly push button 1 on the turn indicator. See **Fig. 24**.
3. Lever the turn indicator up or down repeatedly until the tire monitor symbol appears in the display, accompanied by the word "RESET". See **Fig. 24**.
4. Press button 2 to confirm your choice of the Flat Tire Monitor.
5. Press button 2 for approx. 5 seconds until the a check mark is shown next to the "RESET" display.
6. Drive the vehicle.

The initialization is completed during driving, which can be interrupted at any time. When driving resumes, the initialization is continued automatically.

Fig. 24: Flat Tire Monitor Status Display
Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: Do not initialize the system while snow chains are attached.

NOTE: Each time a tire inflation pressure has been corrected or a wheel or tire has been changed, reset the system.

IMPORTANT: The system does not work correctly if it has not been reset; for example, a flat tire may be indicated even though the tire inflation pressures are correct. The system is inactive and cannot indicate a flat tire if a wheel without TPM electronics, such as a compact spare wheel, has been mounted, or if TPM is temporarily malfunctioning due to other systems or devices using the same radio frequency.

Reset:

1. Start the engine.
2. Lightly push button 1 on the turn indicator. See **Fig. 25**.
3. Lever the turn indicator up or down repeatedly until the tire monitor symbol appears in the display, accompanied by the word "RESET". See **Fig. 25**.
4. Press button 2 to confirm your choice of the Tire Pressure Monitor. In the display, "ACTIVE" will appear above "RESET". See **Fig. 25**.
5. Press button 2 for approx. 5 seconds. In the display, "RESETTING" will now appear above "RESET". See **Fig. 25**.
6. Drive the vehicle.

After driving a few minutes, the set inflation pressures in the tires are accepted as the target values to be monitored. The system reset is completed during your drive, and can be interrupted at any time. When driving resumes, the reset is continued automatically. The indicator lamp goes out after the system reset is completed.

Fig. 25: Tire Pressure Monitor Status Display
Courtesy of BMW OF NORTH AMERICA, INC.

System Reset Failure:

- **Message For Unsuccessful System Reset:** The warning lamp lights up yellow. The system was not reset. Check the tire inflation pressure and reset the system.
- **Malfunction:** The small warning lamp flashes in yellow and then lights up continuously; the larger warning lamp comes on in yellow. On the Control Display, the tires are shown in gray and a message appears. No punctures can be detected. This type of message is shown in the following situations:
 - If there is a malfunction. Have the system checked.
 - If a wheel without TPM electronics has been mounted.
 - If TPM is temporarily malfunctioning due to other systems or devices using the same radio

frequency.

GENERAL INFORMATION

Air Bag Deactivation Procedures - BMW

SPECIAL CARE DURING MECHANICAL REPAIRS

WARNING: To avoid injury from accidental air bag deployment, read and carefully follow all SERVICE PRECAUTIONS and DISABLING & ACTIVATING AIR BAG SYSTEM procedures.

WARNING: Some vehicles are equipped with a passenger's side air bag ON/OFF switch. This switch should NOT be used in place of specified vehicle air bag system disabling and activating procedures.

WARNING: DO NOT use any type of back-up power supply (memory saver) from outside vehicle to avoid memory loss in memory systems, if equipped. Back-up power supplies can provide enough voltage to deploy air bags.

NOTE: When the battery is disconnected, vehicle computer and memory system may lose data. Driveability problems may exist until computer systems have completed a relearn cycle.

In some instances, it may be necessary to remove steering column or instrument panel to gain access to blower motor housing, heater assembly, evaporator assembly, or other A/C-heater system related components. Observe manufacturer service precautions when working on a vehicle equipped with an air bag system. See SERVICE PRECAUTIONS .

Electrical sources should never be allowed near inflator on back of air bag module. Never probe air bag system electrical wires with analog volt-ohmmeter or test light. Always disable air bag system before servicing vehicle. See DISABLING & ACTIVATING AIR BAG SYSTEM procedure. Failure to do so could result in accidental air bag deployment and possible personal injury.

If air bag system is not fully functional for any reason, DO NOT drive vehicle until system is repaired and is again operational. DO NOT remove bulbs, modules, sensors or other components, or in any way disable system from operating normally. If air bag system is not functional, park vehicle until system is repaired and functions properly.

SYSTEM OPERATION CHECK

1. Turn ignition switch to ON position, with engine off. SRS is operational if AIR BAG warning light comes on and then goes out after about 6 seconds with engine off.
2. If AIR BAG warning light remains on, this indicates a fault in the SRS. If AIR BAG warning light fails to illuminate when ignition is first turned on, this indicates bulb is faulty or there is a fault in the wiring circuit to the bulb.

SERVICE PRECAUTIONS

Observe these precautions when working on SRS:

- When working around steering column and before any repairs are performed, disable SRS. See **DISABLING & ACTIVATING AIR BAG SYSTEM** .
- Before straightening damaged metal or arc-welding, disable SRS and disconnect front sensors, front air bag modules, seat belt tensioners (if equipped) and side air bag modules connectors. See **DISABLING & ACTIVATING AIR BAG SYSTEM** .
- After disabling SRS, wait at least 5 minutes before servicing vehicle. SRS control unit maintains SRS voltage for about 5 minutes after system is disabled. Servicing SRS before 5 minutes may cause accidental air bag deployment and possible personal injury.
- Always wear safety glasses and gloves when handling a deployed air bag module. Air bag module may contain sodium hydroxide deposits, which irritates skin.
- Handle sensors carefully. Never strike or jar sensors. All sensors and mounting bracket bolts must be tightened to specification to ensure proper sensor operation.
- Never use any SRS component that has been dropped from a height of 2 feet or higher.
- DO NOT repair any SRS component or wiring harness; replace only. Wiring harnesses and connectors are Orange for immediate identification.
- To avoid air bag deployment, DO NOT use self-powered electrical test equipment on driver's or passenger's air bag modules. This equipment includes battery powered circuit testers, voltmeters and ohmmeters.
- Always handle air bag module with trim cover away from body. Always place air bag module on workbench with trim cover up, away from loose objects. DO NOT leave air bag modules unattended.
- Never expose SRS components to temperatures greater than 167°F (75°C).
- Front air bag modules, belt tensioners and side air bag modules (if equipped) can only be checked while installed in vehicle and using a BMW Service Tester/DIS. Only attempt SRS inspections using specified procedures and checking devices.
- Never expose any SRS system components to cleaning agents such as solvents, gasoline, lye, etc.

DISABLING & ACTIVATING AIR BAG SYSTEM

CAUTION: Ensure radio is off before disconnecting battery. This will prevent damage to radio microprocessor. On cars with radio codes, ask customer for radio code card before disconnecting battery. Make a note of stored transmitters, restore these transmitters after reconnecting the battery.

1. Before proceeding, see **SERVICE PRECAUTIONS** . Retrieve fault codes before disconnecting battery. Ensure radio and ignition is off. Disconnect and shield negative battery cable. WAIT at least 5 minutes (one minute on 7-series models) for energy capacitor in SRS control unit to discharge. System is now disabled.
2. Ensure no one is inside vehicle and connect negative battery cable. System is now activated. Perform system operation check to ensure system is functioning properly and no fault codes are set. See **SYSTEM OPERATION CHECK** .

ELECTRONIC POWER STEERING

Overview - X3 (E83)

DESCRIPTION & OPERATION

RACK & PINION & SERVOTRONIC STEERING

Conventional rack and pinion power steering is used in the X3 (E83) and Servotronic is available as an option. The design and functioning principle of the Servotronic option are nothing new but have been modified as described in this chapter. The servotronic steering system controls the amount of power assistance based on the current road speed. The hydraulic pressure is electronically adapted to the current road speed, with greater power assistance available at lower road speeds and less power assistance available at greater road speeds.

The E83 is equipped with hydraulic assisted rack and pinion steering. The total ratio of the steering is: 18.9:1. The total rack stroke is 81.0 mm (1.7 turns of the steering wheel). The hydraulic ports on the steering gear have quick release couplings. The hydraulic pump maximum pressure is limited to 127 bar. E83 vehicles are equipped with "W" shaped cooling loops (hoses) to assist in cooling. The hydraulic pump does not have a pump end shutdown feature. The hydraulic pump could be damaged after approximately 1 minute if the steering is kept on full lock (end stop) for a long period.

SERVOTRONIC INTRODUCTION

Servotronic does not regulate the steering force support in a conventional way by using the engine speed, rather it is dependent upon the car's road speed. The Servotronic regulates the hydraulic pressure in the power-steering pump. Adaptation of the hydraulic pressure to the car's road speed has the effect of:

- High steering force support at low road speeds.
- Minimum steering force support at high road speeds.

This means that minimum force is required for steering force at slow road speeds. As the road speed increases the steering force support is continuously reduced. Contact to the road surface therefore becomes more direct and steering is more precise. Consequently, steering is very comfortable and maneuverability is maximized, for instance when parking and maneuvering at slow speeds.

COMPONENTS

NOTE: The following actuators are involved in the Servotronic.

Servotronic Control Unit (SVT)

The SVT control unit specifies the nominal values for controlling the Servotronic valve (hydraulic pressure). The SVT control unit is connected to the PT-CAN (powertrain CAN) and K-Bus (body bus).

DSC Control Unit (Dynamic Stability Control)

The DSC control unit delivers the car's road speed signal. The DSC control unit and SVT control unit are connected by the PT-CAN.

DME or DDE (Digital Engine Electronics or Digital Diesel Electronics DDE)

The Servotronic receives the signal of whether the engine is running from the DME or DDE over the PT-CAN. The Servotronic only activates the Servotronic valve when the engine is running.

Instrument Cluster (KOMBI)

The instrument cluster delivers the terminal status (e.g. terminal 15 ON) and the kilometer reading.

Servotronic Valve

The Servotronic valve is an electro-hydraulic converter located in the power-assisted steering oil circuit. The Servotronic valve restricts the hydraulic current and consequently reduces the hydraulic pressure. The Servotronic valve is activated by a characteristic curve delivered by the SVT control unit.

SYSTEM FUNCTIONS

The Servotronic is based upon the following system functions:

- Initialization of the Servotronic.
- Recording of the speed.
- Supplying the Servotronic valve with power.
- Undervoltage detection and overvoltage detection.

Initialization of the Servotronic

The Servotronic is active from terminal 15 ON. A short initialization phase for the Servotronic (under 1 second) is necessary when the engine starts in order to reach the characteristic curve for a low road speed as fast as

possible. A plausibility check for supplying the Servotronic valve is performed during the initialization phase.

Recording of the Speed

The road-speed signal is calculated by the DSC and supplied to the PT-CAN. The Servotronic specifies an acceleration value for plausibility of the road-speed signal. A road speed is calculated from the acceleration value. At a low acceleration the road-speed signal supplied by the DSC is used. At a higher acceleration the Servotronic control unit calculates the road speed internally. The road speed is stored in the Servotronic control unit.

Supplying the Servotronic Valve with Power

The Servotronic valve is supplied with power in response to the car's road speed. The power-assisted steering characteristic is memorized in a characteristic curve. The characteristic curve specifies the power based on the car's road speed. The characteristic curve is written using 16 reference points. The Servotronic valve is no longer supplied with power when the engine is OFF (over the PT-CAN). Minimum steering force support is set (high road speed) when the Servotronic valve is no longer supplied with power. Equally, the Servotronic valve is also no longer supplied with power if there is a fault-memory entry.

Undervoltage detection and overvoltage detection

The Servotronic valve is no longer supplied with power under the following conditions:

- Supply Voltage Less Than 9 Volts
- Supply Voltage Higher Than 17 Volts

Voltage dips during ignition faults are detected.

SWITCH-ON CONDITIONS

Switch-on conditions for the Servotronic are:

- Terminal 15 ON
- Engine Must Be Running

The Servotronic only activates the Servotronic valve when the engine is running. When the engine has started and a road-speed signal is not supplied, the Servotronic sets the maximum steering force support. If a plausible road-speed signal is detected, the Servotronic valve is activated by the characteristic curve. If there is still not a (or not a plausible) road-speed signal 5 seconds after the engine has started, the minimum steering force support is set.

STEERING

Steering - Operating Fluids

GEMMER STEERING

The ZF Gemmer steering is permanently filled with oil. There is no drain plug.

ZF RACK AND PINION STEERING WITHOUT POWER ASSIST

The ZF rack and pinion steering is lubricated for its service life and therefore does not require servicing.

In case of repair, steering components on E21 vehicles are to be lubricated with a sodium-based grease, with a temperature range of -30°C to +75°C.

BMW PART NUMBER SPECIFICATION

Calypsol D 4024	BMW Part No. 32 11 1 116 929
-----------------	------------------------------

BALL AND NUT OR RACK AND PINION POWER STEERING

Only reputable brand Automatic Transmission Fluid (ATF) of Dexron® III formulation may be used for the power steering and power steering pump.

In case of brief hydraulic noise after starting at low outside temperatures, we recommend replacing the red ATF with green CHF or LHM oil (see below).

4.0 ZF Ball and Nut Power Steering with H31 System

The approved oils for BMW models with power steering and the H31 brake booster system are identical with those oils approved for power steering without the H31 system except for the following:

E32 models with self-leveling rear suspension and mutual oil supply tank in the engine compartment.

Countries with very low outside temperatures (e.g. Canada) had their power steering systems filled at the factory with Pentosin CHF 7.1 since 9/87 through 9/91. This is also to be used on vehicles built before 9/87.

Since 9/91, vehicles now use Pentosin CHF 11S instead of CHF 7.1.

BMW PART NUMBER SPECIFICATION

Pentosin CHF 7.1	BMW Part No. 81 22 1 468 879
Pentosin CHF 11S	BMW Part No. 82 11 1 468 041

These cars are marked with a pertinent label located close to the oil tank.

LHM oils (green color) of the following manufacturers may also be used instead of Pentosin (CHF 7.1):

Shell LHM

Castrol LHM

Exxon LHM

The mixing of CHF, LHM oils and ATF is not permitted.

Pentosin CHF 4548 was used on vehicles built before 9/87 but is no longer available. However, mixing of Pentosin CHF 7.1 with residual quantities of Pentosin CHF 4548 are permitted in these earlier vehicles. Mixing of these two oils is not permitted for E32 / E38 vehicles.

The hydraulic system for power steering and power-assisted brakes must be drained as completely as possible when changing from one type of oil to the other.

All oil supply reservoirs are marked with the type of oil being used - ATF or CHF.

OIL CHANGE FOR POWER STEERING

Regular oil changing is not necessary. However, it is recommended to replace the oil after completion of repairs (unit or line replacement). Use ATF of Dexron® III formulation.

HORN SLIP RINGS

Approved grease is a copper paste (former BMW Part No. 81 22 9 400 794).

32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE

CHASSIS/WHEEL ALIGNMENT PROCEDURE CHART

Check adherence to <u>32 00 ... Test conditions for chassis/wheel alignment check</u>		
I V		
Position vehicle on measuring stand		
I V		
Measure vehicle ride height	OK - >	Carry out chassis/wheel alignment check with ride-height measurement without load, see <u>32 00 155 KDS chassis/wheel alignment check with ride-height measurement without load.</u>
Read off setpoint value in KDS		

Tolerance-20 / +40 mm per wheel permissible Difference between left / right max. 10 mm permissible		
Not OK / no data I V		
Move vehicle into normal position, see <u>32 00 ... Moving vehicle into normal position.</u>		
Introduce load and measure ride heights		
Read off setpoint value in KDS Tolerance \pm 10 mm per wheel permissible Difference between left / right max. 10 mm permissible	Not OK - >	
OK I V		Check suspension for damage, repair if necessary
Move vehicle into design position, see <u>32 00 ... Moving vehicle into design position.</u>	<- Not OK	
Add/distribute weights and measure ride heights		
Read off setpoint value in KDS Tolerance \pm 2 mm per wheel permissible Difference between left / right max. 2 mm permissible		
I V		
Carry out chassis/wheel alignment check with load up to design position, see <u>32 00 155 KDS chassis/wheel alignment check with ride-height measurement without load.</u>		

32 00 ... GENERAL CHASSIS AND SUSPENSION DEFINITIONS

31 32 018

- | | |
|---|------------------------|
| 1. Toe | 5. Wheel offset |
| 2. Camber | 6. Camber |
| 3. Caster (with 10° or 20° wheel lock) | 7. Rear-wheel position |
| 4. Toe angle difference (with 20° wheel lock) | 8. Toe |
| | 9. Geometrical axis |

Fig. 3: Chassis And Suspension Angle

Courtesy of BMW OF NORTH AMERICA, INC.

32 00 ... GENERAL INFORMATION AND DEFINITIONS

Toe angle difference

a Toe angle difference

D Center point of operating circle

The toe angle difference is the angle adjustment of the inner cornering wheel relative to the outer cornering wheel when negotiating a curve. Steering is designed in such a way that angular position of wheels changes as steering lock progresses.

A correctly adjusted toe angle difference produces equal values for left and right lock with consideration of factory tolerances.

Toe angle difference provides information on corresponding operation of steering trapezoid for left or right steering lock from center position.

Fig. 4: Toe Angle Difference
Courtesy of BMW OF NORTH AMERICA, INC.

Camber

Inclination of the wheel from the perpendicular.

Fig. 5: Camber Inclination Of Wheel From Perpendicular
Courtesy of BMW OF NORTH AMERICA, INC.

Toe

Reduction in distance of front of front wheels to rear of front wheels. The toe-in prevents the wheels from moving apart during driving and thus:

- the wheels from vibrating and grinding
- excessive tire wear
- excessive strain on the steering linkage and its links/joints
- heavy vehicle steering

Measurement is performed in "straight-ahead mode".

Fig. 6: Toe Angle Difference

Courtesy of BMW OF NORTH AMERICA, INC.

Caster

Is the inclination of the kingpin in the direction of travel viewed from the side. The line through the center point of the spring strut support bearing and the control arm ball joint corresponds to the "kingpin".

Thanks to caster, wheels are pulled and not pushed. In a similar manner to king pin inclination, when driving in curves or around corners, returning forces are reproduced to help return wheels to straight-ahead position.

Fig. 7: Caster Angle Difference

Courtesy of BMW OF NORTH AMERICA, INC.

Geometrical axis 1

Is the angle bisector from the total rear-wheel toe.

Front-wheel measurements are taken in reference to this axis.

Symmetrical axis 2

Center line running through front and rear axles.

Fig. 8: Geometrical Axis And Symmetrical Axis
Courtesy of BMW OF NORTH AMERICA, INC.

Wheel offset

Angle by which one front wheel is displaced more towards front or rear than the other front wheel. The wheel offset angle is positive when the right wheel is displaced towards the front and negative when it is displaced towards the rear.

Fig. 9: Wheel Offset Angle
Courtesy of BMW OF NORTH AMERICA, INC.

Kingpin offset/scrub radius

Is the distance from the center of the wheel contact face to the intersection point of the kingpin extension. The line through the center point of the spring strut support bearing and the control arm ball joint corresponds to the "kingpin".

The scrub radius is influenced by camber, kingpin angle and wheel offset of the wheel rim.

Fig. 10: Kingpin Offset/Scrub Radius

Courtesy of BMW OF NORTH AMERICA, INC.

32 00 ... IDENTIFICATION OF SUSPENSION WITHOUT LABEL

NOTE: If the front spring strut does not have a label for suspension identification, the type of suspension can be identified from the part number in the Electronic Parts Catalogue.

32 00 ... INFORMATION ON REPLACING STEERING GEAR AFTER ACCIDENT DAMAGE

Facts:

In the event of accidents or driving conditions similar to accidents, shocklike loads can cause different types of damage to steering gears. When a steering gear is externally undamaged, it is sometimes only possible to identify damage with great difficulty and with great effort. However, damage of this nature poses an unacceptable risk to the vehicle because it can result in failure of the steering system.

Because of the disproportionate amount of effort involved, it is generally not sensible to check thoroughly all the individual components of the steering gear and as an alternative it is necessary to take into account other components which can be checked more easily.

Procedure:

The steering gear must be replaced if one or more of the following points apply:

- A. Visible or noticeable damage to the steering gear
- B. Unacceptable torque increase and jamming when the steering gear is turned from lock to lock (without hydraulic assistance)
- C. Permissible tolerances exceeded during axle/wheel alignment check (if necessary, include alignment record with invoice / report)
- D. Fire damage
- E. Damage, permanent deformation or fractures to:

- Wheel rims in the event of a negative result from the wheel/axle alignment check
- Spring struts, steering knuckles, wheel carriers
- Control arms
- Compression or tension struts or stabilizer bars with this function
- Body-side screwing/bolting points for wheel guide/control components
- Front axle carrier
- Pitman arms
- Tie rods
- Steering gear fixtures
- Steering column

This guideline is binding for all accident repairs to BMW and MINI vehicles.

NOTE: If the steering gear replacement work which is required for safety reasons is refused by the customer or an insurance company for cost reasons, a memorandum to that effect must be drawn up and countersigned by the party bearing the costs of the accident repair.

IMPORTANT: The vehicle's type approval will be invalidated whenever the function of any of its safety components is compromised!

32 00 ... MOVING VEHICLE INTO DESIGN POSITION

Necessary preliminary tasks:

- Move vehicle into normal position, see **32 00 ... Moving vehicle into normal position.**
- Version with air spring system:
 - Remove ignition key
 - Pull fuse for air supply unit control unit
- Add/distribute weights in area of spring struts until the vehicle ride height is within the tolerance (refer to **31 00 FRONT AXLE - RIDE HEIGHT E83**).

Measure ride-level height of vehicle

32 00 ... MOVING VEHICLE INTO NORMAL POSITION

Necessary preliminary tasks:

- Check compliance with test conditions, bring vehicle to a stop if necessary, see **32 00 ... Test conditions for chassis/wheel alignment check.**
- Version with air spring system: Carry out ride-height-calibration
- Check vehicle interior and luggage compartment (incl. luggage compartment recess) for load, unload

vehicle if necessary

- Introduce DIN load (refer to **32 00 CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83**) into vehicle
- Determine vehicle ride height

NOTE: **If the vehicle ride height is not inside the tolerance (refer to 31 00 FRONT AXLE - RIDE HEIGHT E83), the vehicle must be repaired (coil spring/leakage).**

32 00 ... PERFORMING RIM RUNOUT COMPENSATION

NOTE: **Rim runout compensation involves electronically recording the lateral runout of the rim and the possible clamping error of the quick-clamping unit for one wheel rotation and compensating the toe and camber for measurement/alignment.**

Raise body.

Perform rim runout compensation in accordance with equipment manufacturer's instructions.

Compress/deflect car.

32 00 ... TEST CONDITIONS FOR CHASSIS/WHEEL ALIGNMENT CHECK

Observe the following test conditions prior to the chassis/wheel alignment check:

1. Correct and identical rim and tyre sizes.
2. Correct tread depth. The tread depth for each axle may differ from left to right by max. 3-4 mm.
3. Correct tyre inflation pressure (see instruction plate on car).
4. Wheel bearing clearance OK
5. Steering backlash OK
6. Condition of suspension and shock absorbers OK
7. Cars with ride level control: Pull fuse of air supply unit so that there is no controlling down or up.

32 00 ... TROUBLESHOOTING AFTER WHEEL/CHASSIS ALIGNMENT CHECK ON FRONT AXLE

Substandard roadholding, atypical noises, tyres worn on one side and toe-in/camber values which deviate from the nominal value are all indicators of damage to the suspension caused by road traffic accidents or similar impacts.

To carry out proper repairs, you must follow the procedure set out in the troubleshooting table below depending on the condition of the vehicle in question.

You must also follow the rules and guidelines for accident-related repairs to the steering gear, see **32 00 ... Information on replacing steering gear after accident damage.**

NOTE: If after chassis/suspension components have been replaced adjustment of camber/track alignment is not possible, the vehicle must be placed on the straightening bench

TROUBLESHOOTING CHART

Fault	Cause	Remedy	
Toe deviation	Tie rod end worn	Replace tie rod end, see <u>32 21 151 Replacing left or right tie rod</u>	
	Tie rod bent	Replace tie rod, see <u>32 21 231 Replacing left or right tie rod</u>	
	Rubber mount or guide joint of tension strut faulty	Replace rubber mount or guide joint, see <u>31 12 026 REMOVING AND INSTALLING/REPLACING GUIDE JOINT IN SWIVEL BEARING</u>	
	Rubber mount or ball joint of control arm faulty	Replace rubber mount or control arm, see <u>31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM</u>	
Camber deviation	Rubber mount or ball joint of control arm faulty	Replace rubber mount or control arm, see <u>31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM</u>	
	Control arm deformed	Replace control arms <u>31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM</u>	
	Rubber mount or guide joint of tension strut faulty	Replace rubber mount or guide joint, see <u>31 12 026 REMOVING AND INSTALLING/REPLACING GUIDE JOINT IN SWIVEL BEARING</u>	
	Tension strut deformed	Replace both tension struts, see <u>31 12 050 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT TENSION STRUT</u>	
	Spring strut/piston rod of shock absorber deformed	Replace front spring strut, see <u>31 31 031 REPLACING FRONT LEFT OR RIGHT SPRING STRUT SHOCK ABSORBER</u>	
	Ride height between driver's and passenger sides different		Check load, correct if necessary, see <u>32 00 CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83</u>
			Replace coil spring, see <u>31 33 100 REMOVING AND INSTALLING/REPLACING COIL SPRING FOR LEFT OR RIGHT FRONT SPRING STRUT</u>
Front axle carrier deformed	Replace front axle carrier, see <u>31 11 001 REPLACING FRONT AXLE CARRIER (6-CYLINDER)</u>		
	Rubber mount or ball joint of control arm faulty	Replace rubber mount or control arm, see <u>31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM</u>	
	Control arm deformed	Replace control arms <u>31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM</u>	

Caster deviation NOTE: Caster is defined by design and cannot be adjusted	Rubber mount or guide joint of tension strut faulty	Replace rubber mount or guide joint, see <u>31 12 026 REMOVING AND INSTALLING/REPLACING GUIDE JOINT IN SWIVEL BEARING</u>	
	Tension strut deformed	Replace both tension struts, see <u>31 12 050 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT TENSION STRUT</u>	
	Spring strut/piston rod of shock absorber deformed	Replace front spring strut, see <u>31 31 031 REPLACING FRONT LEFT OR RIGHT SPRING STRUT SHOCK ABSORBER</u>	
	Front axle carrier deformed	Replace front axle carrier, see <u>31 11 001 REPLACING FRONT AXLE CARRIER (6-CYLINDER)</u>	
	Ride height between driver's and passenger sides different		Check load, correct if necessary, see <u>32 00 CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83</u>
			Air spring strut: Carry out ride-height-calibration Check coil springs, replace if necessary, see <u>31 33 100 REMOVING AND INSTALLING/REPLACING COIL SPRING FOR LEFT OR RIGHT FRONT SPRING STRUT</u>
Toe-difference angle deviation Prerequisite: camber and caster are correct	Tie rods not adjusted uniformly	Adjust toe on left and right sides to same value, see <u>32 00 150 KDS chassis/wheel alignment check with load up to design position</u>	
Wheel-offset deviation Prerequisite: front wheels have equal single toe to geometrical axis	Front axle carrier deformed	Replace front axle carrier, see <u>31 11 001 REPLACING FRONT AXLE CARRIER (6-CYLINDER)</u>	
	Control arm deformed	Replace control arms <u>31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM</u>	
	Tension strut deformed	Replace both tension struts, see <u>31 12 050 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT TENSION STRUT</u>	

32 00 ... TROUBLESHOOTING AFTER WHEEL/CHASSIS ALIGNMENT CHECK ON REAR AXLE

Substandard roadholding, atypical noises, tyres worn on one side and toe/camber values which deviate from the nominal value are all indicators of damage to the suspension caused by road traffic accidents or similar impacts.

To carry out proper repairs, you must follow the procedure set out in the troubleshooting table below depending on the condition of the vehicle in question.

NOTE: If after chassis/suspension components have been replaced adjustment of camber/track alignment is not possible, the vehicle must be placed on the straightening bench

TROUBLESHOOTING CHART

--	--	--

Fault	Cause	Remedy
Camber deviation	Rubber mount of upper control arm faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
	Upper control arm deformed	Replace upper control arm, see <u>33 32 071 REPLACING ONE UPPER CONTROL ARM</u>
	Rubber mount of lower control arm faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
	Lower control arm deformed	Replace lower control arm, see <u>33 32 086 REMOVING AND INSTALLING/REPLACING BOTTOM LEFT CONTROL ARM</u>
	Rubber mount/ball joint in trailing arm faulty	Replace rubber mount/ball joint, see <u>33 32 042 REPLACING A RUBBER MOUNT IN TRAILING ARM, FRONT</u> .
	Rubber mount of rear axle carrier faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
	Rear axle carrier deformed	Replace rear axle carrier, see <u>33 31 011 REPLACING REAR AXLE CARRIER</u> .
Toe deviation	Rubber mount of upper control arm faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
	Upper control arm deformed	Replace upper control arm, see <u>33 32 071 REPLACING ONE UPPER CONTROL ARM</u>
	Rubber mount of lower control arm faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
	Lower control arm deformed	Replace lower control arm, see <u>33 32 086 REMOVING AND INSTALLING/REPLACING BOTTOM LEFT CONTROL ARM</u>
	Rubber mount/ball joint in trailing arm faulty	Replace rubber mount/ball joint, see <u>33 32 042 REPLACING A RUBBER MOUNT IN TRAILING ARM, FRONT</u> .
	Trailing arm deformed	Replace trailing arm, see <u>33 32 021 REPLACING LEFT OR RIGHT TRAILING ARM</u> .
	Rubber mount of rear axle carrier faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
Rear axle carrier deformed	Replace rear axle carrier, see <u>33 31 011 REPLACING REAR AXLE CARRIER</u> .	
Rear-wheel position incorrect	Rear axle carrier displaced laterally	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)</u> .
Deviation of	Rubber mount/ball joint	Replace rubber mount/ball joint, see <u>33 32 042 REPLACING</u>

geometrical axis from symmetrical axis Prerequisite: single wheel toe cannot be adjusted	joint in trailing arm faulty	<u>A RUBBER MOUNT IN TRAILING ARM, FRONT .</u>
	Rubber mount of rear axle carrier faulty	Replace rubber mount, see <u>33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED) .</u>

32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION

Except M models:

IMPORTANT: Carry out chassis/wheel alignment with DIN load only:

- A. If the technical preconditions for alignment with ride height input are not in place**
- B. If, in spite of repairs having been carried out, the car's ride height between the left and right sides is still outside the tolerance**
- C. If the vehicles in question have been involved in an accident**

NOTE:

- **Read and comply with General information and definitions, see 32 00 ... General information and definitions.**
- **Read and comply with General chassis definition, see 32 00 ... General chassis and suspension definitions.**

- If necessary, prepare lifting platform.
- Drive vehicle onto lifting platform.

NOTE: The front and rear wheels must be positioned centrally on the rotary and sliding plates.

- Remove locking pins from both rotary and sliding plates, align pickup using bubble level and activate

Fig. 11: Lifting Platform

Courtesy of BMW OF NORTH AMERICA, INC.

- Attach quick-clamping holder/quick-clamping unit to vehicle and remove clamping levers in area of front wheels
- Attach pickup to quick-clamping holder/quick-clamping unit, align using bubble level and connect to rotary plates

NOTE: When using quick-clamping units, perform rim runout compensation after installing the pickups, see 32 00 ... Performing rim runout compensation.

Fig. 12: Attaching Quick-Clamping Holder/Quick-Clamping
Courtesy of BMW OF NORTH AMERICA, INC.

- If necessary, attach spoiler adapter.

Fig. 13: Spoiler Adapter

Courtesy of BMW OF NORTH AMERICA, INC.

- If necessary, switch on chassis alignment system
- Enter customer and vehicle data

- Identify chassis version and select vehicle, see 32 00 ... Identification of suspension without label.
- Enter tyre pressure and tread depth
- Move vehicle into design position, see 32 00 ... Moving vehicle into design position.
- Install brake tensioner.

Fig. 14: Locating Brake Tensioner
 Courtesy of BMW OF NORTH AMERICA, INC.

E87, E90, E91, E92:

IMPORTANT: Risk of damage!

In order to avoid damaging the front side panel during the "Max. steering lock" drive-in routine, make sure the pickups are removed from the quick-clamping holders/quick-clamping units during output and input alignment. In the process do not detach the connecting cable from the pickups or the rotary plates.

NOTE: After the drive-in routine, reconnect the pickups to the quick-clamping holders/quick-clamping units, align using the bubble levels and secure in place.

- Perform input measurement in accordance with equipment manufacturer's instructions.
- Compare specified values with actual values, see 32 00 CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83 .

Only in event of customer complaint (e.g. poor driving performance):

IMPORTANT: Do not remove screws/bolts (front axle carrier to engine carrier / body).

Slacken all screws/bolts (front axle carrier to engine carrier / body) and then retighten to specified torque.

Refer to 31 11 506 LOWERING/RAISING FRONT AXLE CARRIER .

- If necessary, adjust front axle and rear axle, see 32 00 610 Adjusting toe-in and camber on front axle.

- Perform output measurement in accordance with equipment manufacturer's instructions.
- Save and print out test record.
- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment.**
- Insert locking pins into both rotary and sliding plates
- Remove chassis/wheel alignment system

32 00 155 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH RIDE-HEIGHT MEASUREMENT WITHOUT LOAD

IMPORTANT: Do not carry out chassis/wheel alignment without load:

- A. if the technical requirements for alignment with ride height input are not in place**
- B. if, in spite of repairs having been carried out, the car's ride height between the left and right sides is still outside the tolerance**
- C. if the vehicles in question have been involved in an accident**

NOTE:

- **Read and comply with General information and definitions, see 32 00 ... General information and definitions.**
- **Read and comply with General chassis definition, see 32 00 ... General chassis and suspension definitions.**

- Check compliance with test conditions, bring vehicle to a stop if necessary, see **32 00 ... Test conditions for chassis/wheel alignment check.**
- If necessary, prepare lifting platform.
- Drive vehicle onto lifting platform.

NOTE: The front and rear wheels must be positioned centrally on the rotary and sliding plates.

- Remove locking pins from both rotary and sliding plates, align pickup using bubble level and activate

Fig. 15: Lifting Platform

Courtesy of BMW OF NORTH AMERICA, INC.

- If necessary, switch on chassis alignment system
- Enter customer and vehicle data
- Identify chassis version and select vehicle, see **32 00 ... Identification of suspension without label.**
- Enter tyre pressure and tread depth
- Measure and enter vehicle ride height
- Attach quick-clamping holder/quick-clamping unit to vehicle and remove clamping levers in area of front wheels
- Attach pickup to quick-clamping holder/quick-clamping unit, align using bubble level and connect to rotary plates

NOTE: When using quick-clamping units, perform rim runout compensation after installing the pickups, see **32 00 ... Performing rim runout compensation.**

Fig. 16: Attaching Quick-Clamping Holder/Quick-Clamping

Courtesy of BMW OF NORTH AMERICA, INC.

- If necessary, attach spoiler adapter.

R32 0241

Fig. 17: Spoiler Adapter
Courtesy of BMW OF NORTH AMERICA, INC.

- Install brake tensioner.

Fig. 18: Locating Brake Tensioner
Courtesy of BMW OF NORTH AMERICA, INC.

E87, E90, E91, E92:

IMPORTANT: Risk of damage!

In order to avoid damaging the front side panel during the "Max. steering lock" drive-in routine, make sure the pickups are removed from the quick-clamping holders/quick-clamping units during output and input alignment. In the process do not detach the connecting cable from the pickups or the rotary plates.

NOTE: After the drive-in routine, reconnect the pickups to the quickclamping holders/quick-clamping units, align using the bubble levels and secure in place.

- Perform input measurement in accordance with equipment manufacturer's instructions.
- Compare specified values with actual values, see **32 00 CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83** .

Only in event of customer complaint (e.g. poor driving performance):

IMPORTANT: Do not remove screws/bolts (front axle carrier to engine carrier / body).

Slacken all screws/bolts (front axle carrier to engine carrier / body) and then retighten to specified torque.

Refer to **31 11 506 LOWERING/RAISING FRONT AXLE CARRIER** .

- If necessary, adjust front axle and rear axle, see **32 00 610 Adjusting toe-in and camber on front axle**.
- Perform output measurement in accordance with equipment manufacturer's instructions.
- Save and print out test record.
- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment**.
- Insert locking pins into both rotary and sliding plates
- Remove chassis/wheel alignment system
- Drive vehicle off lifting platform.

32 00 610 ADJUSTING TOE-IN AND CAMBER ON FRONT AXLE

Special tools required:

- **32 3 140 SETTING TOOL**

IMPORTANT: Changes in axle geometry caused by accidents must under no circumstances be rectified by camber adjustment!

**NOTE: Camber and toe-in influence each other. Adjust the toe-in first in order to simplify the adjustment procedure.
The centering pin may only be driven or twisted out if the camber is outside the specified tolerance after toe adjustment.**

Adjust toe-in:

If necessary, remove steering gear cover at side

Move steering into straight-ahead position by means of markings on cap (1) and steering gear (2).

Align steering wheel and secure with steering wheel arrester.

Fig. 19: Locating Markings On Cap And Steering Gear
Courtesy of BMW OF NORTH AMERICA, INC.

Clean thread on tie rod.

Slacken clamping nut (2), gripping tie rod end (1) in the process.

Remove clamp (4).

Turn tie rod (3) to adjust toe-in to specified value.

Tighten down clamping nut (2).

Tightening torque: 32 21 5AZ, see **32 21 STEERING ARMS** .

Fit clamp (4).

Fig. 20: Clamping Nut, Tie Rod End And Clamp
Courtesy of BMW OF NORTH AMERICA, INC.

Adjusting camber:

Remove protective cap.

Knock out centering pin (1) in downwards direction.

Clean wheel arch from below in area of support bearing with compressed air.

Slacken nut (2) approx. 1 to 1.5 turns.

Fig. 21: Centering Pin And Slacken Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Insert special tool 32 3 140 into wheel arch opening and over nut.

Replace nuts (1) and screw on but do not tighten down fully.

Turn nut in special tool 32 3 140 using open-end wrench (2) to adjust camber to specified value.

Tighten down nuts (1).

Tightening torque: 31 31 1AZ, see **31 31 SPRING STRUTS** .

Remove special tool 32 3 140.

Fig. 22: Nuts And Special Tool (32 3 140)

Courtesy of BMW OF NORTH AMERICA, INC.

Replace nut (1) and tighten down.

Tightening torque: 31 31 1AZ, see **31 31 SPRING STRUTS** .

Fig. 23: Nut

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check directional stability of vehicle; if necessary, repeat toe-in adjustment

32 00 620 ADJUSTING REAR AXLE

Special tools required:

- **32 3 030 SETTING TOOL**

NOTE: **A camber change always means a toe change as well. The camber must therefore be adjusted first.**

Adjusting camber:

Replace nut (2) and tighten to 5 Nm.

Turn eccentric bolt (1) to adjust camber to setpoint value.

Tighten nut (2).

Tightening torque: 33 32 25AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 24: Turning Eccentric Bolt To Adjust Camber
 Courtesy of BMW OF NORTH AMERICA, INC.

Adjusting toe:

Slacken bolts of bearing block by approx. 1 to 1.5 turns.

Attach special tool 32 3 030 to bolt head and pin (1).

Turn special tool 32 3 030 to adjust toe to specified value.

Tighten down bolts.

Tightening torque: 33 32 13AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 25: Special Tool (32 3 030) And Bolt Head And Pin
 Courtesy of BMW OF NORTH AMERICA, INC.

61 31 996 CARRY OUT STEERING ANGLE SENSOR ADJUSTMENT

IMPORTANT: In vehicles with active front steering, steering angle sensor adjustment is integrated in the service function "Initial operation/adjustment for active front steering" and must not be carried out separately!

NOTE: **Steering angle sensor adjustment must be carried out:**

- after adjustment work on the front axle/steering
- after all mechanical work on the steering system
- after replacement / coding / programming of the following components:
 - Fixture for switches of steering column / switch cluster / steering angle sensor
 - Dynamic Stability Control (DSC) control unit
 - Control unit active anti-roll stabilization (ARS)

Connect vehicle to BMW diagnosis system or Software Service Station.

Select and carry out steering angle sensor adjustment under Service functions.

11 MECHANICAL STEERING GEAR

32 11 100 REPLACING GAITER FOR STEERING GEAR ON LEFT OR RIGHT

IMPORTANT: The power steering gear must be replaced if the polished surface of the rack is damaged (e.g. by corrosion).

Necessary preliminary tasks:

- Remove tie rod end, see **32 21 151 Replacing left or right tie rod**
- Only at 4th cylinder: Remove reinforcement plate, see **31 10 010 REMOVING AND INSTALLING/REPLACING REINFORCEMENT PLATE** .
- If necessary, remove steering gear cover at side

Clean tie rod.

Release band clamp (1) and ear clip (3), see **32 41 ... Instructions for removing and installing ear clips**

Detach gaiter (2) from tie rod.

Installation:

Clean rack and check surface for damage (e.g. by corrosion).

Grease rack.

Clean tie rod and apply grease to taper.

NOTE: **This ensures that the gaiter is not rotated when the tie rod is rotated.**

Fig. 26: Clamp, Ear Clip And Gaiter

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform 32 00 150 KDS chassis/wheel alignment check with load up to design position.
- Carry out steering angle sensor adjustment, see 61 31 996 Carry out steering angle sensor adjustment.

13 STEERING GEAR WITH SERVO UNIT

32 13 ... FITTING REPAIR KIT FOR FCD COUPLING

Special tools required:

- 32 1 021 32 1 020 SET OF TOOLS
- 32 1 022 32 1 020 SET OF TOOLS
- 32 1 023 32 1 020 SET OF TOOLS

Remove FCD coupling.

Only following parts can be replaced on coupling head:

1. FCD dirt seal
2. Support ring
3. O-ring

IMPORTANT: Support ring and O-ring must not be mixed up! Always fit repair kit for FCD coupling completely.

Fig. 27: FCD Dirt Seal, Support Ring And O-Ring
Courtesy of BMW OF NORTH AMERICA, INC.

Press in special tool 32 1 023 as far as it will go in connecting piece on hydraulic steering gear. Then pull out again.

Fig. 28: Pressing Special Tool (32 1 023)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove spring ring (1) from special tool 32 1 023.

Fig. 29: Spring Ring And Special Tool (32 1 023)
Courtesy of BMW OF NORTH AMERICA, INC.

Lay new spring ring (1) in special tool 32 1 021.

Using special tool 32 1 022 , press spring ring (1) into connection. In so doing, press through special tool as far as it will go.

Installation:

Bore hole in special tool 32 1 021 is conical. Special tool must rest with stepped side securely on connection of hydraulic steering gear.

Fig. 30: Pressing Spring Ring Into Connection Using Special Tool (32 1 022)
Courtesy of BMW OF NORTH AMERICA, INC.

32 13 ... NOTES ON REMOVING/INSTALLING FCD CLUTCHES

Special tools required:

- **32 1 030 LEVER**
- **32 1 300 FORK**

There are 2 different types of FCD clutches:

1. FCD clutches with plastic caps
2. Metal FCD clutches (N73 only!)

FCD clutches without plastic caps must be replaced with a suitable special tool!

FCD coupling with plastic caps:

Removal

To release quick-release coupling, turn cap from position (A) - closed - to position (B) - open.

Fig. 31: Turning Cap From Position (A)
 Courtesy of BMW OF NORTH AMERICA, INC.

Unlock quick-release coupling by pressing on cap (1).

Detach line while pressing cap.

In event of removal while installed, use special tool 32 1 030.

Position special tool close to locking head.

If necessary, fit repair kit for FCD coupling.

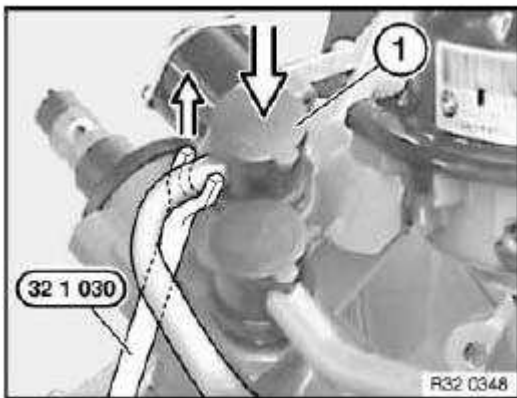

Fig. 32: Cap And Special Tool (32 1 030)
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation

Coat seal pack (O-ring (1), support ring (2)) with hydraulic fluid before sliding in.

Slide quick-release coupling into housing by pressing on coupling cover.

Quick-release coupling must snap into place with an audible "click".

Fig. 33: Seal Pack (O-Ring And Support Ring)
Courtesy of BMW OF NORTH AMERICA, INC.

If necessary, lock coupling by turning cap from position (B) to position (A).

Lug of coupling must be over line outlet - position (A).

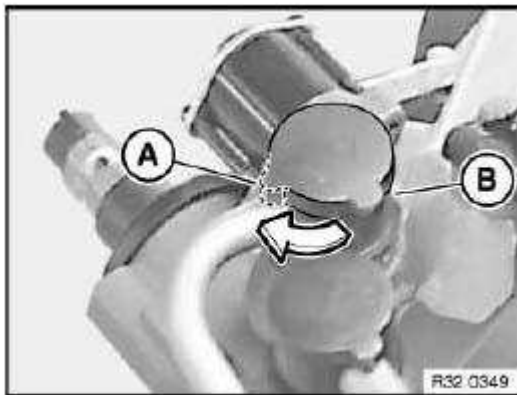

Fig. 34: Turning Cap From Position (B) To Position (A)
Courtesy of BMW OF NORTH AMERICA, INC.

Metal FCD clutches:

Removal

Metal quick-release couplings can only be opened with special tool 32 1 300.

Fig. 35: Special Tool (32 1 300)
Courtesy of BMW OF NORTH AMERICA, INC.

Slide special tool 32 1 300 between metal head (1) and rubber lip (2) of quick-release coupling.

Fig. 36: Sliding Special Tool (32 1 300) Between Metal Head And Rubber Lip Of Quick-Release Coupling
Courtesy of BMW OF NORTH AMERICA, INC.

Slide in special tool 32 1 300 as far as it will go. Quick-release coupling unlocks with a light click.

Then pull off coupling and tool towards top.

Fig. 37: Pulling Off Coupling
Courtesy of BMW OF NORTH AMERICA, INC.

Installation

Remove tool.

Press quick-release coupling into steering gear.

Quick-release coupling must snap into place with an audible click.

Fig. 38: Pressing Quick-Release Coupling Into Steering Gear
Courtesy of BMW OF NORTH AMERICA, INC.

32 13 006 BLEEDING POWER STEERING UNIT

WARNING: Danger of poisoning if oil is ingested/absorbed through the skin! See 00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN .

Risk of injury if oil comes into contact with eyes and skin! See 00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN .

IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.

Using contaminated equipment to add fluid may introduce dirt particles into the fluid reservoir and significantly reduce the service life of the power steering system. Do not use any filler funnels or similar!

The fill level may only be checked or adjusted when the engine is stopped! The fluid temperature should be approx. 20°C here.

Ensure that the cap is fully screwed in prior to the fill level check.

NOTE: To avoid mix-ups when filling with hydraulic fluid, mark the fluid reservoirs or their caps with identification marks.

ATF Automatic transmission fluid

CHF Pentosin CHF11S

Fig. 39: Reservoirs Wire Caps

Courtesy of BMW OF NORTH AMERICA, INC.

1. Thoroughly clean fluid reservoir and its immediate surroundings
2. Check and correct fill level

NOTE: The fill level can come to rest above the "MAX" mark when the engine is at normal operating temperature. This is dictated by the design in that the marking on the dipstick is referred to a fluid temperature of 20°C. With the engine at normal operating temperature (approx. 50-60°C fluid temperature) adjust a fill height 10 mm above the "MAX" mark. Do not under any circumstances draw off the fluid to the "MAX" mark when the engine is at normal operating temperature.

Hydraulic fluid: BMW Service Operating Fluids

3. Start engine
4. Turn steering wheel left and right twice in each case up to full lock; if necessary, top up hydraulic fluid (e.g. if hydraulic system is completely drained)
5. Move steering wheel to straight-ahead position and turn off engine
6. Check and correct fill level with engine stopped
7. Check hydraulic system for leaks

32 13 060 REMOVING AND INSTALLING/REPLACING POWER STEERING GEAR

**IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.
Seal off pipe connections with plugs.**

Necessary preliminary tasks:

- Draw off and dispose off hydraulic fluid from fluid reservoir
- If necessary, remove assembly underside protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .
- Remove reinforcement plate, see **31 10 010 REMOVING AND INSTALLING/REPLACING REINFORCEMENT PLATE** .
- If necessary, remove steering gear cover on both sides
- Remove double joint from power steering gear, see **32 31 219 Removing and installing/replacing double joint with flexible disk**.
- Remove tie rod end from swivel bearing, see **32 21 151 Replacing left or right tie rod**.
- Replacement only:
 - Remove tie rod end at both ends of tie rod, see **32 21 151 Replacing left or right tie rod**.
- Remove stabilizer link on both sides from stabilizer, see **31 35 005 REMOVING AND INSTALLING/REPLACING PUSH ROD (STABILIZER LINK) FOR LEFT/RIGHT STABILIZER** .

If necessary, remove heat shield from power steering gear. Release FCD couplings, see **32 13 ... Notes on removing/installing FCD clutches** , disconnect hydraulic lines and lay to one side.

Disconnect plug connection on EH converter

Fig. 40: Disconnecting Plug Connection On EH Converter
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1).

Turn left swivel bearing to left.

If necessary, detach pressure line from front axle carrier.

Turn power steering gear and remove through left wheel arch.

Installation:

Replace screws and self-locking nuts.

Tightening torque: 32 00 1AZ, see **32 00 STEERING** .

Fig. 41: Screws
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**

- Check pipe connections for leaks
- Perform **32 00 150 KDS chassis/wheel alignment check with load up to design position.**
- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment.**

32 13 650 REMOVING AND INSTALLING/REPLACING EH CONVERTER FOR SERVOTRONIC

IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.

Necessary preliminary tasks:

- If necessary, remove steering gear cover at side

Disconnect plug connection (1).

Unfasten screws (2).

Remove EH converter (3).

Installation:

Clean side return orifice with compressed air.

Align EH converter (3) to opening in power steering gear, press by hand into power steering gear up to stop, insert screws (2) and tighten down.

Tightening torque: 32 13 12AZ, see **32 13 POWER STEERING GEAR** .

Fig. 42: Plug Connection, Screws And EH Converter
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**

21 STEERING ARMS, TIE RODS, STEERING DAMPER

32 21 151 REPLACING LEFT OR RIGHT TIE ROD

Special tools required:

- **31 2 300 EXTRACTOR**

Necessary preliminary tasks:

- Remove front wheel, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .

After installation:

- Perform **32 00 150 KDS chassis/wheel alignment check with load up to design position**.
- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment**.

Release nut; if necessary, grip brace at Torx socket.

Force tie rod end off swivel bearing with special tool 31 2 300.

Installation:

Keep journal on tie rod end and bore hole in swivel bearing clean and free from grease.

Replace self-locking nut.

Tightening torque: 32 21 3AZ, see **32 21 STEERING ARMS** .

Fig. 43: Special Tool (31 1 300)

Courtesy of BMW OF NORTH AMERICA, INC.

Determine measurement (A) to simplify following adjustment of front axle.

Release clamping nut.

Screw off tie rod end; if necessary, grip tie rod with open-end wrench.

Installation:

Check gaiter , replace if necessary.

Mount clamping ring (1).

Screw in tie rod end to measurement (A).

Tightening torque: 32 21 5AZ, see **32 21 STEERING ARMS** .

Fig. 44: Measurement (A) Of Front Axle
Courtesy of BMW OF NORTH AMERICA, INC.

32 21 231 REPLACING LEFT OR RIGHT TIE ROD

Necessary preliminary tasks:

- Remove tie rod end from swivel bearing, see **32 21 151 Replacing left or right tie rod.**
- Remove gaiter from power steering gear and slide back, see **32 11 100 Replacing gaiter for steering gear on left or right.**

IMPORTANT: To avoid damage to rack and to suspension mounting, move rack in as far as possible.

Screw tie rod off rack of power steering gear.

Installation:

Clean rack and check surface for damage (e.g. by corrosion).

Replace O-ring.

Grease rack and O-ring.

Tightening torque: 32 21 2AZ, see **32 21 STEERING ARMS** .

Fig. 45: Locating Rack

Courtesy of BMW OF NORTH AMERICA, INC.

Assembling new component with gaiter:

Release clamping nut (2).

Screw off tie rod end; if necessary, grip tie rod with open-end wrench.

Remove clamping ring (1) and screw off clamping nut (2).

Slide gaiter (4) and band clamp (3) onto tie rod.

Screw clamping nut (2) onto tie rod.

Slide clamping ring (1) onto tie rod.

Determine measurement (A) on old part to simplify following adjustment of front axle.

Screw tie rod end onto tie rod to measurement (A).

Tighten down clamping nut (2).

Tightening torque: 32 21 5AZ, see **32 21 STEERING ARMS** .

Fig. 46: Clamping Ring, Clamping Nut, Clamp And Gaiter
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS chassis/wheel alignment check with load up to design position.**
- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment.**

31 STEERING COLUMN

32 31 003 REPLACING UPPER SECTION OF STEERING COLUMN TRIM

Necessary preliminary tasks:

Remove lower section of steering column trim, see **32 31 020 Removing and installing / replacing lower section of steering column trim.**

Move steering column in "bottom" and "extended" position.

Release expander rivet.

Installation:

If necessary, replace expansion rivet.

Fig. 47: Locating Expander Rivet

Courtesy of BMW OF NORTH AMERICA, INC.

Tilt steering column trim forwards.

Unclip steering column gap cover from steering column trim.

Remove steering column trim.

Installation:

Make sure steering column gap cover is in correct installation position.

Fig. 48: Locating Steering Column Trim

Courtesy of BMW OF NORTH AMERICA, INC.

32 31 020 REMOVING AND INSTALLING / REPLACING LOWER SECTION OF STEERING COLUMN TRIM

Necessary preliminary tasks:

- Unclip panel for pedals in area of steering column trim, see **51 45 185 REMOVING AND INSTALLING/REPLACING TRIM FOR PEDAL ASSEMBLY** .

Move steering column in "top" and "extended" position.

Remove expander rivets (1).

NOTE: Press pin approx. 5 mm into expander rivet (1).

Installation:

Expander rivet can be reused. Insert rivet and push in pin until flush.

Release adjusting lever (2) for steering column.

Reach into opening underneath and pull off lower section of steering column trim (3) towards bottom.

Fig. 49: Expander Rivets And Adjusting Lever
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Catch (1), guide (2), pin (3) and lock (4) must not be damaged.

Insert pin (3) at both ends into bore until lower section of steering column trim can be heard to engage with upper section via lock (4).

Press lower section of steering column trim against steering column until catch (1) locks.

Fig. 50: Catch, Guide, Pin And Lock
Courtesy of BMW OF NORTH AMERICA, INC.

32 31 070 REMOVING AND INSTALLING / REPLACING LOWER SECTION OF STEERING SPINDLE

IMPORTANT: If the lower section of the steering spindle is separated from the power steering gear/steering column, this can result in damage to the steering column switch cluster when the steering wheel is turned!

Release clamping screw.

Move steering wheel to straight-ahead position and remove ignition key.

Detach lower steering spindle from steering column and remove with double joint towards bottom.

Installation:

Recut thread.

Replace clamping screw.

Clamping screw must rest in groove of steering column.

Tightening torque: 32 31 1AZ, see **32 31 STEERING COLUMN** .

Fig. 51: Locating Clamping Screw
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

Release clamping screw.

Pull lower section of steering spindle (1) out of double joint with flexible disk.

Installation:

Recut thread.

Replace clamping screw.

Clamping screw must rest in groove of lower steering spindle (1).

Tightening torque: 32 31 13AZ, see **32 31 STEERING COLUMN** .

Fig. 52: Lower Section Of Steering Spindle
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out steering angle sensor adjustment, see 61 31 996 Carry out steering angle sensor adjustment.
- Turn steering wheel in both directions to full lock

NOTE: **The airbag warning lamp must not light up in the process.**

- Check directional stability of vehicle

32 31 082 REMOVING AND INSTALLING/REPLACING STEERING ANGLE SENSOR

Necessary preliminary tasks:

- Slide upper steering spindle into steering column (see 32 31 102 Replacing steering spindle sleeve)

After installation:

- Replacement only: Carry out programming/coding using appropriate BMW service tool.
- Carry out steering angle sensor adjustment, see 61 31 996 Carry out steering angle sensor adjustment.

Release screw (1).

NOTE: **For the following work step, the plug connection does not have to be disconnected nor does the brake pedal return spring have to be disengaged.**

Remove holder (3) with brake light switch from pedal assembly bearing block (2).

Installation:

Insert holder (3) with guide (4) into opening in pedal assembly bearing block (2).

Fig. 53: Screw, Bearing, Holder And Guide
Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew nut (1).

Tightening torque: 32 31 16AZ, see **32 31 STEERING COLUMN** .

Press brake pedal forwards.

Press out screw (2) with a suitable tool.

Remove plug connection for steering angle sensor (4) from holder, unlock and disconnect.

Expose cable up to steering angle sensor (4).

Installation:

Align guide bushes (3) to bores in mounting plate (5).

Fig. 54: Nut, Screw, Steering Angle Sensor, Guide Bushes And Mounting Plate
Courtesy of BMW OF NORTH AMERICA, INC.

Pull steering column (3) downwards a little.

Insert a spacer (2) with a height of 4 to 5 cm between mounting plate (1) and steering column (3).

Detach sleeve (5) from upper steering spindle.

Press both hooks inwards and detach steering angle sensor (4) towards bottom.

Fig. 55: Mounting Plate, Spacer, Steering Column, Steering Angle Sensor And Sleeve
 Courtesy of BMW OF NORTH AMERICA, INC.

32 31 090 REMOVING AND INSTALLING/REPLACING STEERING COLUMN

Necessary preliminary tasks:

- Slide upper section of steering spindle into steering column (see **REPLACING STEERING SPINDLE SLEEVE**)
- Remove fixture for steering column stalks

Disconnect plug connections (1, 2).

If necessary, remove interlock cable from steering column, see **32 32 170 Removing and installing/replacing interlock cable**.

Expose wiring harness and remove from cable duct (3).

Turn holder (5) approx. 45° downwards and remove.

Remove plug connection (4) from holder (5) and disconnect.

Fig. 56: Plug Connections And Holder
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1, 2).

Tightening torque: 32 31 6AZ, see **32 31 STEERING COLUMN** .

Fig. 57: Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew nuts.

Remove steering column towards rear through instrument panel.

Installation:

Replace self-locking nuts.

Tightening torque: 32 31 15AZ, see **32 31 STEERING COLUMN** .

Fig. 58: Locating Nuts
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

- Modify cable duct
- Modify lock cylinder, see **32 32 050 Removing and installing/replacing steering lock cylinder.**
- Modify steering angle sensor, see **32 31 082 Removing and installing/replacing steering angle sensor.**

After installation:

- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment.**
- Perform function check:
 - I. Check for ease of movement in overall adjustment range of steering column to adjoining components/wires
 - II. Turn steering wheel in both directions to full lock. The airbag warning lamp must not light up in the process.
 - Check directional stability of vehicle

32 31 102 REPLACING STEERING SPINDLE SLEEVE

Necessary preliminary tasks:

- Remove lower section of steering spindle, see **32 31 070 Removing and installing / replacing lower section of steering spindle.**
- Remove trim for pedal assembly, see **51 45 185 REMOVING AND INSTALLING/REPLACING TRIM FOR PEDAL ASSEMBLY .**

Press crash disk (2) off crash sleeve (1).

Open crash sleeve (1) slightly and remove from upper steering spindle (3).

Slide upper steering spindle (3) into steering column.

Remove crash disk (2).

Installation:

Replace crash sleeve (1).

Fig. 59: Crash Sleeve, Crash Disk And Upper Steering Spindle
Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew nuts (1).

Remove sleeve bracket (2).

Installation:

Replace self-locking nuts.

Tightening torque: 32 31 10AZ, see **32 31 STEERING COLUMN** .

Fig. 60: Nuts And Sleeve Bracket
Courtesy of BMW OF NORTH AMERICA, INC.

Remove sleeve from bulkhead.

Installation:

Make sure sleeve is correctly seated in relation to opening in bulkhead.

Fig. 61: Locating Sleeve

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment.**

32 31 219 REMOVING AND INSTALLING/REPLACING DOUBLE JOINT WITH FLEXIBLE DISK

Necessary preliminary tasks:

- If necessary, remove steering gear cover at side

Release clamping screw, turn power steering if necessary.

Move steering wheel to straight-ahead position and remove ignition key.

Detach double joint with flexible disk from power steering gear.

Installation:

If necessary, move power steering gear to straight-ahead position - markings on cap and housing must match up.

Replace clamping screw.

Tightening torque: 32 31 1AZ, see **32 31 STEERING COLUMN** .

Fig. 62: Detaching Double Joint With Flexible Disk From Power Steering Gear
Courtesy of BMW OF NORTH AMERICA, INC.

Release clamping screw.

Detach double joint with flexible disk from lower steering spindle (1).

Installation:

Clamping screw must rest in groove of lower steering spindle (1).

Replace clamping screw.

Tightening torque: 32 31 13AZ, see **32 31 STEERING COLUMN** .

Fig. 63: Lower Section Of Steering Spindle
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out steering angle sensor adjustment, see **61 31 996 Carry out steering angle sensor adjustment.**

32 31 241 REPLACING ADJUSTING LEVER FOR STEERING COLUMN

Necessary preliminary tasks:

- Remove lower section of trim, see 32 31 020 Removing and installing / replacing lower section of steering column trim.

Disconnect plug connections (1).

Remove wiring harness (2) from cable guide (3).

Fig. 64: Plug Connections, Wiring Harness And Cable Guide
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1), remove cable guide (2).

Fig. 65: Screws And Cable Guide
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Clamping bearing must be held down until secured.

Securing clamping bearing:

- Pull retaining tab (1) in direction of steering column.
- Turn clamping bearing head (3) so that pin (2) on clamping bearing is held by retaining tab (1).

Fig. 66: Pulling Retaining Tab

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: The secure fitting must not be released when the adjusting

Unscrew nut (1).

Remove needle bearing (2) and washer.

Pull out adjusting lever (3).

Installation:

- Replace nut (1).
- Move adjusting lever (3) into locked position.
- Fit washer and needle bearing (2) and screw on nut (1) until it contacts needle bearing (2).

Fig. 67: Nut, Needle Bearing And Adjusting Lever

Courtesy of BMW OF NORTH AMERICA, INC.

- Open and close adjusting lever (3).
- Tighten nut (1) to torque value 1.

Tightening torque: 32 31 3AZ, see **32 31 STEERING COLUMN** .

- Open and close adjusting lever (3) again.
- Tighten nut (1) to torque value 2.

Tightening torque: 32 31 3AZ, see **32 31 STEERING COLUMN** .

- Open and close adjusting lever (3) again.
- Tighten nut (1) again to torque value 2.

Tightening torque: 32 31 3AZ, see **32 31 STEERING COLUMN** .

IMPORTANT: Observe tightening torques without fail!

The clamping force is adjusted by means of the tightening torque.

32 STEERING LOCK

32 32 050 REMOVING AND INSTALLING/REPLACING STEERING LOCK CYLINDER

Special tools required:

- **32 3 110 RELEASING TOOL**

Necessary preliminary tasks:

- Remove ring antenna

If necessary, unlock interlock through bore (1).

With ignition lock key, turn lock cylinder to required position "R" = radio, windscreen wipers, etc.

Press special tool 32 3 110 into locking cylinder hole and remove locking cylinder.

Fig. 68: Bore And Special Tool (32 3 110)

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Use special tool 32 3 110 to disengage lock (1). If necessary, special tool 32 3 110 must be turned in bore.

Fig. 69: Disengaging Lock

Courtesy of BMW OF NORTH AMERICA, INC.

32 32 170 REMOVING AND INSTALLING/REPLACING INTERLOCK CABLE

Necessary preliminary tasks:

- Remove function carrier on trim for instrument panel, see **51 45 106 REMOVING AND INSTALLING/REPLACING FUNCTION CARRIER ON INSTRUMENT PANEL TRIM**
- Remove lower section of steering column trim, see **32 31 020 Removing and installing / replacing lower section of steering column trim.**

After installation:

- Check function of interlock cable, see **25 16 175 ADJUSTING INTERLOCK CABLE** .
- Adjust interlock cable, see **25 16 175 ADJUSTING INTERLOCK CABLE** .

Release screw (1).

Take off holder (2).

Press interlock cable (3) in area of switch block to driver's side and remove towards front.

Fig. 70: Screw, Holder And Interlock Cable
Courtesy of BMW OF NORTH AMERICA, INC.

Turn guide sleeve (1) through approx. 45°.

Pull interlock cable (2) out of steering column.

Fig. 71: Guide Sleeve And Interlock Cable
Courtesy of BMW OF NORTH AMERICA, INC.

Tie wire or cord to end of interlock cable (1) in area of switch block.

Pull out interlock cable (1) in direction of steering column.

IMPORTANT: Do not kink interlock cable (1).

If necessary, remove wire or cord from interlock cable (1).

Installation:

Check installation position of interlock cable (1) in area of footwell heating duct (2), correct if necessary.

L = steering column, S = switch block

Fig. 72: Interlock Cable And Heating Duct
Courtesy of BMW OF NORTH AMERICA, INC.

Pull through interlock cable (1) in direction of switch block.

Replacement only:

Tie wire of cord to end of new interlock cable.

33 STEERING WHEEL

32 33 ... REPLACING LEFT OR RIGHT COVER FOR STEERING WHEEL (FROM 09/2006)

Necessary preliminary tasks:

- Remove airbag unit, see **32 34 020 Removing and installing/replacing airbag unit (from 09/2006).**

NOTE: For simplification purposes, the illustration shows how to release the screws on the removed steering wheel.

Release screws (1) with Torx screwdriver (T10).

Fig. 73: Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Unclip cover (1).

Fig. 74: Cover
Courtesy of BMW OF NORTH AMERICA, INC.

32 33 000 REMOVING AND INSTALLING/REPLACING STEERING WHEEL (FROM 09/2006)

Necessary preliminary tasks:

- Remove airbag unit, see **32 34 020 Removing and installing/replacing airbag unit (from 09/2006)**.

Move wheels/steering wheel into straight-ahead position.

Release screw (1).

Tightening torque: 32 33 1AZ, see **32 33 STEERING WHEEL** .

Remove steering wheel (2).

Fig. 75: Screw And Steering Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Align steering wheel by way of marking (1) to steering column marking (2) and attach.

Fig. 76: Aligning Steering Wheel By Way Of Marking To Steering Column Marking
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

Modify multifunction steering wheel covers/switches, see **32 33 ... Replacing left or right cover for steering wheel (from 09/2006)**.

32 33 010 REMOVING AND INSTALLING SPORTS STEERING WHEEL

Necessary preliminary tasks:

- Remove airbag unit, see **32 34 020 Removing and installing/replacing airbag unit (from 09/2006)**.
- Move steering wheel/wheels to straight-ahead position

Unscrew bolt (1).

Tightening torque: 32 33 1AZ, see **32 33 STEERING WHEEL** .

Unlock plug connections (2) and disconnect.

Remove sports steering wheel.

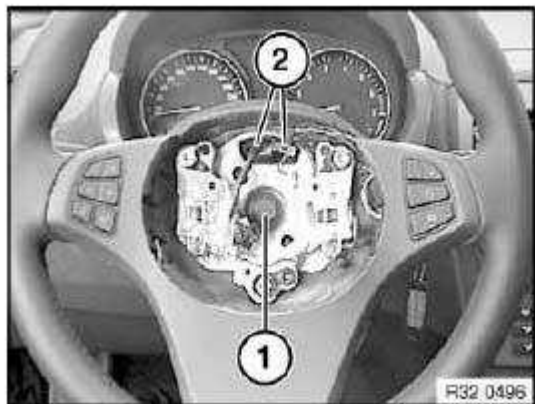

Fig. 77: Bolt And Plug Connections
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Move wheels to straight-ahead position.

Attach sports steering wheel. Markings (1) on sports steering wheel and steering spindle must match up. The retaining pins (2) must also appear in the openings in the sports steering wheel.

Fig. 78: Marking On Sports Steering Wheel And Steering Spindle
Courtesy of BMW OF NORTH AMERICA, INC.

32 33 015 REPLACING SPORTS STEERING WHEEL

Necessary preliminary tasks:

- Remove sports steering wheel, see 32 33 010 Removing and installing sports steering wheel.

Remove cover (1).

If necessary, remove switch (2) for multifunction unit.

Fig. 79: Cover

Courtesy of BMW OF NORTH AMERICA, INC.

34 STEERING WHEEL FOR AIRBAG

32 34 020 REMOVING AND INSTALLING/REPLACING AIRBAG UNIT (FROM 09/2006)

WARNING: Observe the following instructions to avoid any risk of injury by the airbag unit.

- Comply with 72 00 ... SAFETY REGULATIONS FOR HANDLING COMPONENTS WITH GAS GENERATORS .
- Do not exert any force on the airbag unit.
- Use only specified tools for releasing the airbag unit.

NOTE: Incorrect handling may result in triggering of the airbag unit and thereby cause serious injury.

IMPORTANT: Steering wheel must be replaced if airbag unit has been triggered! See 32 33 000 Removing and installing/replacing steering wheel (from 09/2006).

Follow 72 12 ... PROCEDURE AFTER AIRBAG TRIGGERING AS RESULT OF AN ACCIDENT .

Necessary preliminary tasks:

- Disconnect battery negative lead

Insert Torx screwdriver T30 (1) horizontally into opening on reverse side of steering wheel until a spring resistance is felt (approx. 4 cm).

Press spring leg (2) with Torx screwdriver (1) up to stop and pull airbag unit away from steering wheel.

Repeat procedure on other side.

Installation:

Make sure electrical leads are correctly positioned.

Snap airbag unit with uniform pressing force plane-parallel in direction of steering column shaft into steering wheel.

Fig. 80: Torx Screwdriver T30 And Spring Leg
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Danger of injury!

Airbag unit may only be set down with the airbag itself facing upwards.

Tilt airbag unit (1) towards rear.

Disconnect plug connections (2) and remove airbag unit (1), see **72 12 ... UNLOCKING/LOCKING AIRBAG PLUG CONNECTIONS** .

Installation:

Connect plugs to connections of same colour on airbag unit.

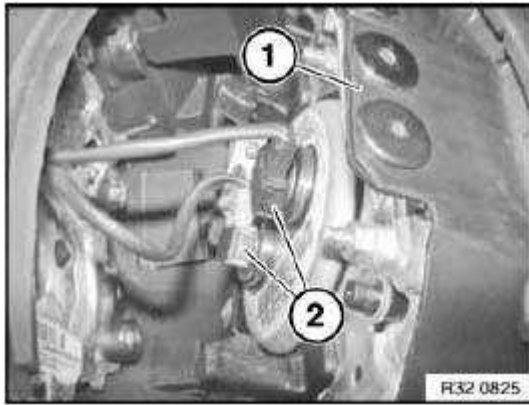

Fig. 81: Airbag Unit And Plug Connections

Courtesy of BMW OF NORTH AMERICA, INC.

32 34 030 REMOVING AND INSTALLING / REPLACING AIRBAG UNIT (SPORT STEERING WHEEL)

WARNING: Observe the following instructions to avoid any risk of injury by the airbag unit.

- Comply with **72 00 ... SAFETY REGULATIONS FOR HANDLING COMPONENTS WITH GAS GENERATORS** .
- Do not exert any force on the airbag unit.
- Use only specified tools for releasing the airbag unit.

NOTE: Incorrect handling may result in triggering of the airbag unit and thereby cause serious injury.

IMPORTANT: Steering wheel must be replaced if airbag unit has been triggered! See **32 33 000 Removing and installing/replacing steering wheel (from 09/2006)**.

Follow 72 12 ... PROCEDURE AFTER AIRBAG TRIGGERING AS RESULT OF AN ACCIDENT .

Necessary preliminary tasks:

- Disconnect battery negative lead

Insert Torx screwdriver (T30) horizontally into opening on reverse side of steering wheel up to stop (approx. 4.5 cm).

Fig. 82: Inserting Torx Screwdriver (T30) Horizontally Into Opening On Reverse Side Of Steering Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

Increase pressure with Torx screwdriver T30 (1) on spring leg (2) until airbag unit is unlocked.

Repeat procedure on other side.

Installation:

Make sure electrical leads are correctly positioned.

Snap airbag unit with uniform pressing force plane-parallel in direction of steering column shaft into steering wheel.

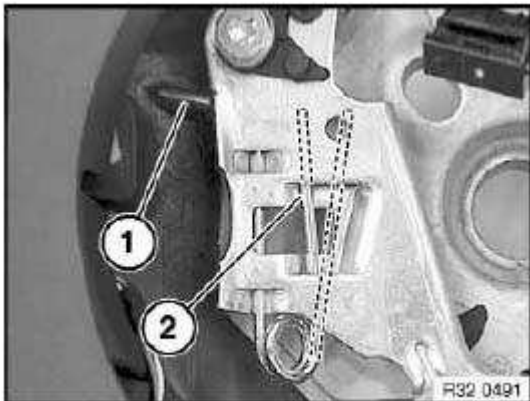

Fig. 83: Torx Screwdriver T30 And Spring Leg
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Danger of injury!

Airbag unit may only be set down with the airbag itself facing upwards.

Tilt airbag unit (1) slightly to one side.

Slide screwdriver (2) from front into both plug connections (3) until cover lifts off.

Disconnect plug connections (3).

Remove airbag unit (1).

Installation:

Connect plugs to connections of same colour on airbag unit.

Fig. 84: Airbag Unit, Screwdriver And Plug Connections
Courtesy of BMW OF NORTH AMERICA, INC.

41 PUMP AND OIL SUPPLY

32 41 ... INSTRUCTIONS FOR REMOVING AND INSTALLING EAR CLIPS

Special tools required:

- **32 1 260 PLIERS**

NOTE: The work steps are show on assorted components. Ear clip must always be replaced.

To remove an ear clip, place special tool 32 1 260 at right angles to ear and cut ear open.

Fig. 85: Special Tool (32 1 260)

Courtesy of BMW OF NORTH AMERICA, INC.

The ear clip can be fitted not only axially but also radially after the hook fastener has been opened.

Fig. 86: Ear Clip

Courtesy of BMW OF NORTH AMERICA, INC.

Attach hook fastener and press ear together with special tool 32 1 260.

Fig. 87: Special Tool (32 1 260)
Courtesy of BMW OF NORTH AMERICA, INC.

Side cutter of special tool 32 1 260 can be used in areas which are difficult to access.

Fig. 88: Special Tool (32 1 260)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Gap (A) max. 1 mm!

Fig. 89: Gap (A)

Courtesy of BMW OF NORTH AMERICA, INC.

32 41 ... INSTRUCTIONS FOR USING SPECIAL TOOL 32 4 000

Special tools required:

- **32 4 000 FIXTURE**
- 32 4 004 **32 4 000 FIXTURE**
- 32 4 005 **32 4 000 FIXTURE**
- 32 4 006 **32 4 000 FIXTURE**
- 32 4 011 **32 4 000 FIXTURE**
- 32 4 012 **32 4 000 FIXTURE**

Depending on the pressure hose connection on the pump, the special tool 32 4 000 must be assembled.

1 = Connection, pump

2 = Connection, steering gear

Fig. 90: Special Tool (32 4 000) And Connections
Courtesy of BMW OF NORTH AMERICA, INC.

Pressure hose connection to pump with M14 x 1.5 banjo bolt:

Screw special tool 32 4 004 with M14 x 1.5 banjo bolt (1) and 2 sealing rings to special tool 32 4 000.

Screw special tool 32 4 011 onto pump and connect special tool 32 4 004.

Screw special tools 32 4 006 / 32 4 012 onto special tool 32 4 000 and connect pressure hose with M14 x 1.5 banjo bolts and 2 sealing rings.

Fig. 91: Special Tools (32 1 030)
Courtesy of BMW OF NORTH AMERICA, INC.

Pressure hose connection to pump with M16 x 1.5 banjo bolt:

Screw special tool 32 4 004 with M14 x 1.5 banjo bolt (1) and 2 sealing rings to special tool 32 4 000.

Screw special tool 32 4 005 onto pump and connect special tool 32 4 004.

Screw special tool 32 4 006 onto special tool 32 4 000 and connect pressure hose with M16 x 1.5 banjo bolt and 2 sealing rings.

Fig. 92: Special Tools (32 4 006), (32 4 004) And (32 4 005)
Courtesy of BMW OF NORTH AMERICA, INC.

Pressure hose connection to pump with M16 x 1.5 union screw: Screw special tool 32 4 004 with M14 x 1.5 banjo bolt (1) and 2 sealing rings to special tool 32 4 000.

Connect special tool 32 4 004 to pump.

Screw special tools 32 4 006 / 32 4 005 onto special tool 32 4 000 and connect pressure hose.

Fig. 93: Special Tools (32 4 006), (32 4 004) And (32 4 005)
Courtesy of BMW OF NORTH AMERICA, INC.

32 41 ... NOTES ON HYDRAULIC LINE WITH QUICK-CONNECT COUPLING

1. **Quick-connect coupling with ID marking**

Fig. 94: Quick-Connect Coupling Component With ID Marking
Courtesy of BMW OF NORTH AMERICA, INC.

Removing:

Push quick-connect coupling (1) against pipe (4) (thereby relieving strain on spring (2)).

Press plastic ring (3) into quick-connect coupling (1) and remove coupling (1).

Assembly:

Markings (K) on coupling (1) and pipe (4) must be flush.

Push quick-connect coupling (1) onto pipe (4) until a "click" can clearly be heard.

To check that quick-connect coupling (1) has been installed correctly, pull it back forcefully.

2. Quick-connect coupling with indication pins

Fig. 95: Quick-Connect Coupling Component With Indication Pins
 Courtesy of BMW OF NORTH AMERICA, INC.

Removing:

Press plastic ring (2) into quick-connect coupling (1) and remove coupling (1).

Assembly:

When replacing hydraulic line: remove transportation lock (T).

Push quick-connect coupling (1) onto pipe (3) until both indication pins (4) can be seen and felt to point outwards at outside diameter of housing.

To check that quick-connect coupling (1) has been correctly fitted, feel indication pins (4) at outside diameter of housing. When correctly seated, indication pins (4) cannot be pressed into housing.

IMPORTANT: Coupling is not correctly engaged if both indication pins (4) fail to protrude from housing. Leakage is thus unavoidable.

32 41 001 SERVOTRONIC TROUBLESHOOTING

Refer to the following two Service Information bulletins for all the necessary information.

- Diagnostic aid for power steering
- Diagnosis of power steering systems

32 41 009 CHECKING FUNCTION OF POWER STEERING VANE PUMP

Special tools required:

- 32 4 000 FIXTURE

IMPORTANT: Prior to this check, first check all hose connections, the vane pump and the power steering gear for leaks.
Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.

Necessary preliminary tasks:

- Draw off and dispose off hydraulic fluid from fluid reservoir
- If necessary, remove front assembly underside protection, see 51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION .
- Disconnect pressure line from vane pump, see 32 41 060 Removing and installing/replacing power steering vane pump (N52).

Connecting special tool:

Connect special tool 32 4 000 (refer to 32 41 ... Instructions for using special tool 32 4 000) with new sealing rings to vane pump and pressure line.

1. Connection, vane pump
2. Connection, power steering gear

Fig. 96: Special Tool (32 4 000) And Connections
 Courtesy of BMW OF NORTH AMERICA, INC.

Checking pump pressure:

1. Close valve (A).
2. Open valve (B).
3. Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
4. Start engine.
5. Heat hydraulic fluid to approx. 50°C by moving steering wheel at increased engine speed.
6. Close valve (B) for max. 10 secs. and read off pressure.
7. Compare measured pressure with specified nominal pressure.

Replace vane pump if the nominal pressure is exceeded by more than 10 %, see **32 41 060 Removing and installing/replacing power steering vane pump (N52)**

Fig. 97: Special Tool (32 4 000) And Valve
Courtesy of BMW OF NORTH AMERICA, INC.

Check belt tension if the nominal pressure is undershot by more than 10 %. Replace vane pump if belt tension is OK, see **32 41 060 Removing and installing/replacing power steering vane pump (N52)**

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
- Check pipe connections for leaks

32 41 060 REMOVING AND INSTALLING/REPLACING POWER STEERING VANE PUMP (N52)

IMPORTANT: Aluminium-magnesium materials.

No steel screws/bolts may be used due to the threat of electrochemical corrosion.

A magnesium crankcase requires aluminium screws/bolts exclusively.

Aluminium screws/bolts must be replaced each time they are released.

The end faces of aluminium screws/bolts are painted blue for the purposes of

reliable identification.

Jointing torque and angle of rotation must be observed without fail (risk of damage).

**IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.
Close off pipe connections with plugs.**

Necessary preliminary tasks:

- Draw off and dispose of hydraulic fluid from fluid reservoir
- Remove intake filter housing, see **13 71 000 REMOVING AND INSTALLING/REPLACING INTAKE FILTER HOUSING (N52K)** .
- Remove belt pulley, see **32 41 100 Removing and installing/replacing belt pulley on vane pump for power steering**.

Release hose clamp (1) and detach suction line (2) from vane pump.

Installation:

Align suction line by way of marking to connection on vane pump.

Fig. 98: Hose Clamp And Suction Line
Courtesy of BMW OF NORTH AMERICA, INC.

Release bolts (1).

Installation:

Replace aluminium screws.

Observe screwing sequence.

Fig. 99: Bolts

Courtesy of BMW OF NORTH AMERICA, INC.

Remove front underbody protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .

Release banjo bolt (1) and disconnect pressure line.

Installation:

Replace sealing ring.

Make sure pressure line is laid without tension and with sufficient spacing to adjoining components.

Tightening torque: 32 41 3AZ, see **32 41 PUMP AND OIL SUPPLY** .

Release screws (2) and remove vane pump towards top.

Installation:

Replace aluminium screws.

Fig. 100: Banjo Bolt And Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Observe screwing sequence.

Screw-fastening sequence:

1. Secure vane pump with screws
2. Tighten side screws to 2 Nm
3. Tighten front screws to 2 Nm
4. Tighten down front screws to jointing torque and angle of rotation

Tightening torque: 32 41 1AZ, see **32 41 PUMP AND OIL SUPPLY** .

5. Release screws at side and check screw fastening points for gap freedom
6. Tighten down side screws to jointing torque and angle of rotation

Tightening torque: 32 41 1AZ, see **32 41 PUMP AND OIL SUPPLY** .

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit**.
- Check pipe connections for leaks

32 41 100 REMOVING AND INSTALLING/REPLACING BELT PULLEY ON VANE PUMP FOR POWER STEERING

NOTE: Carry out preliminary work as described in the document "Replacing drive belt".

Slacken screws (1)

Relieve tension on drive belt and remove from belt pulley (2).

Unscrew bolts (1) and remove belt pulley (2).

Installation:

Lettering on belt pulley (2) must point forwards.

Tightening torque: 32 41 14AZ, see **32 41 PUMP AND OIL SUPPLY** .

Fig. 101: Screws And Belt Pulley

Courtesy of BMW OF NORTH AMERICA, INC.

32 41 250 REMOVING AND INSTALLING/REPLACING FLUID RESERVOIR FOR POWER STEERING (M54, N46, N52)

Special tools required:

- **32 1 260 PLIERS**

**IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.
Seal off pipe connections with plugs.**

Necessary preliminary tasks:

- Draw off and dispose of hydraulic fluid from fluid reservoir
- Remove intake filter housing, see **13 71 000 REMOVING AND INSTALLING/REPLACING INTAKE FILTER HOUSING (N52K)** .
- N46: Remove intake duct

N52:

IMPORTANT: Cover alternator with a suitable covering to prevent ingress of hydraulic fluid.

Release screw (1).

Tightening torque: 32 41 9AZ, see **32 41 PUMP AND OIL SUPPLY** .

Remove hose clamps if necessary with special tool 32 1 260.

NOTE: If necessary, raise and/or turn fluid reservoir in order to gain better access to

hose clamps.

Disconnect suction line and radiator return line from fluid reservoir.

Lift out fluid reservoir.

Fig. 102: Lifting Out Fluid Reservoir
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
- Check pipe connections for leaks

32 41 311 REPLACING SUCTION LINE FOR POWER STEERING (N52)

IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.

Seal off hydraulic lines with plugs.

Necessary preliminary tasks:

- Draw off and dispose of hydraulic fluid from fluid reservoir
- Remove front underbody protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION .**
- Remove intake filter housing, see **13 71 000 REMOVING AND INSTALLING/REPLACING INTAKE FILTER HOUSING (N52K) .**

Remove fluid reservoir from mounting bracket/body.

Release hose clamp (1) and detach suction line (2) from fluid reservoir.

Installation:

Make sure hydraulic line is laid without tension and with sufficient spacing to adjoining components.

Fig. 103: Hose Clamp And Suction Line
Courtesy of BMW OF NORTH AMERICA, INC.

Expose suction line up to connection on vane pump.

Release hose clamp (1) and detach suction line (2) from vane pump.

Installation:

Markings (3) on suction line and vane pump must match up.

If a marking is missing, it is important to ensure when installing the hydraulic line that it is laid without tension and with sufficient spacing to adjoining components.

Fig. 104: Hose Clamp And Suction Line
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
- Check pipe connections for leaks

32 41 331 REPLACING PRESSURE LINE FOR POWER STEERING (N52)

**IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.
Seal off hydraulic lines with plugs.**

Recycling:

Catch and dispose of hydraulic fluid in a suitable container.

Necessary preliminary tasks:

- Draw off and dispose of hydraulic fluid from fluid reservoir
- Remove front underbody protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION .**

Release union screw (1) and detach pressure line (2) from vane pump.

Installation:

Replace sealing ring.

Make sure hydraulic line is laid without tension and with sufficient spacing to adjoining components.

Tightening torque: 32 41 3AZ, see **32 41 PUMP AND OIL SUPPLY .**

Fig. 105: Union Screw And Pressure Line
Courtesy of BMW OF NORTH AMERICA, INC.

Expose pressure line up to connection on power steering gear.

Release FCD coupling and disconnect pressure line.

Fig. 106: Disconnecting Plug Connection On EH Converter
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
- Check pipe connections for leaks

32 41 341 REPLACING COOLER RETURN LINE FOR POWER STEERING (M54, N46, N52)

**IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.
Seal off hydraulic lines with plugs.**

Recycling:

Catch and dispose of hydraulic fluid in a suitable container.

Necessary preliminary tasks:

- Draw off and dispose of hydraulic fluid from fluid reservoir
- N46: Remove intake duct
- Remove intake filter housing, see **13 71 000 REMOVING AND INSTALLING/REPLACING INTAKE FILTER HOUSING (N52K) .**

Remove fluid reservoir from mounting bracket/body.

Release hose clamp (1) and detach cooler return line (2) from fluid reservoir.

Installation:

Make sure hydraulic line is laid without tension and with sufficient spacing to adjoining components.

Fig. 107: Hose Clamp And Suction Line
Courtesy of BMW OF NORTH AMERICA, INC.

Expose cooler return line up to connection on power steering coil.

Release quick-connect coupling and seal power steering coil connection with a suitable plug, see **32 41 ... Notes on hydraulic line with quick-connect coupling.**

Installation:

Make sure hydraulic line is laid without tension and with sufficient spacing to adjoining components.

Fig. 108: Quick-Connect Coupling And Seal Power Steering Coil
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
- Check pipe connections for leaks

32 41 351 REPLACING RETURN LINE FOR POWER STEERING

**IMPORTANT: Adhere to the utmost cleanliness. Do not allow any dirt to enter the hydraulic system.
Seal off hydraulic lines with plugs.**

Recycling:

Catch and dispose of hydraulic fluid in a suitable container.

Necessary preliminary tasks:

- Draw off and dispose of hydraulic fluid from fluid reservoir
- Remove intake filter housing, see **13 71 000 REMOVING AND INSTALLING/REPLACING INTAKE FILTER HOUSING (N52K)** .

Release quick-connect coupling and seal power steering coil connection with a suitable plug, see **32 41 ... Notes on hydraulic line with quick-connect coupling**.

Installation:

Make sure hydraulic line is laid without tension and with sufficient spacing to adjoining components.

Fig. 109: Locating Quick-Connect Coupling
Courtesy of BMW OF NORTH AMERICA, INC.

Remove reinforcement plate, see **31 10 010 REMOVING AND INSTALLING/REPLACING REINFORCEMENT PLATE** .

Diesel engines: Partially detach steering gear cover.

Expose return line up to connection on power steering gear.

Release FCD coupling and disconnect return line.

Fig. 110: Disconnecting Return Line
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Fill and bleed hydraulic system, see **32 13 006 Bleeding power steering unit.**
- Check pipe connections for leaks

43 ELECTRONIC POWER STEERING

32 43 521 REPLACING SERVOTRONIC CONTROL UNIT

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTROSTATIC DISCHARGE)

Necessary preliminary tasks:

- Remove ignition key
- Disconnect battery negative lead
- Remove glovebox, see **51 16 360 REMOVING AND INSTALLING RIGHT GLOVEBOX .**

Disconnect plug connection (1).

Unlock catch (2) and remove control unit (3).

Fig. 111: Plug Connection, Catch And Control Unit
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Replacement only: Carry out programming/coding using appropriate BMW service tool.

90 TROUBLESHOOTING

32 90 ... TROUBLESHOOTING ON STEERING

Observe troubleshooting on front axle and diagnosis help for steering (SI), see **31 90 ... FRONT AXLE TROUBLESHOOTING** .

FRONT AXLE TROUBLESHOOTING CHART

Fault	Cause	Remedy
Excessive steering wheel play/steering wheel shake	Screws at lower section of steering spindle to steering gear/steering column loose	Replace screws and tighten down (refer to <u>32 31 070 Removing and installing / replacing lower section of steering spindle</u>)
	Bolt connection, universal joint/double joint, to lower section of steering spindle/steering gear/steering column loose	Replace and tighten down bolts (refer to <u>32 31 219 Removing and installing/replacing double joint with flexible disk</u>)
	Journal of tie rod end deformed	Replace steering gear and tie rod ends, see <u>32 13 060 Removing and installing/replacing power steering gear</u>
	Tie rod end worn	Check steering gear rack; if necessary, replace steering gear, see <u>32 13 060 Removing and installing/replacing power steering gear</u> Check tie rods, replace if necessary, see <u>32 21 231 Replacing left or right tie rod</u> Replace tie rod end, see <u>32 21 151 Replacing left or right tie rod</u>

	Steering gear rack damaged	Replace steering gear, see <u>32 13 060</u> <u>Removing and installing/replacing power steering gear</u>
	Refer to <u>31 90 ... FRONT AXLE TROUBLESHOOTING</u>	
Steering wheel inclination	Tie rod end worn	Replace tie rod end, see <u>32 21 151</u> <u>Replacing left or right tie rod</u>
	Front axle alignment incorrectly adjusted	Carry out chassis/wheel alignment check, adjust toe/track if necessary, see <u>32 00 ... Chassis/wheel alignment check procedure</u>
	Refer to <u>31 90 ... FRONT AXLE TROUBLESHOOTING</u>	

STEERING

Steering and Wheel Alignment - SI Techniques - X3

32 STEERING AND WHEEL ALIGNMENT

SERVOTRONIC

E83

Fig. 1: Servotronic
Courtesy of BMW OF NORTH AMERICA, INC.

INTRODUCTION

The Servotronic does not regulate the steering force support in a conventional way by using the engine speed, rather it is dependent upon the car's road speed. The Servotronic regulates the hydraulic pressure in the power-steering pump. Adaptation of the hydraulic pressure to the car's road speed has the effect of:

- High steering force support at low road speeds
- Minimum steering force support at high road speeds

This means that minimum force is required for steering force at slow road speeds. As the road speed increases the steering force support is continuously reduced. Contact to the road surface therefore becomes more direct

and steering is more precise. Consequently, steering is very comfortable and maneuverability is maximized, for instance when parking and maneuvering at slow speeds.

New: In E83 the Servotronic is integrated in its own control unit.

The Servotronic is available as special equipment (option 216).

BRIEF DESCRIPTION OF COMPONENTS

The following control units are involved in the Servotronic:

- **Servotronic control unit (SVT)**

The SVT control unit specifies the nominal values for controlling the Servotronic valve (hydraulic pressure). The SVT control unit is connected to the PT-CAN (powertrain CAN) and K-Bus (body bus).

- **DSC control unit (Dynamic Stability Control)**

The DSC control unit delivers the car's road speed signal. The DSC control unit and SVT control unit are connected by the PT-CAN.

- **DME or DDE (Digital Engine Electronics or Digital Diesel Electronics DDE)**

The Servotronic receives the signal of whether the engine is running from the DME or DDE over the PT-CAN. The Servotronic only activates the Servotronic valve when the engine is running.

- **Instrument cluster (KOMBI)**

The instrument cluster delivers the terminal status (e.g. terminal 15 ON) and the kilometer reading.

The following actuators are controlled by the Servotronic:

- **Servotronic valve**

The Servotronic valve is an electro-hydraulic converter located in the power-assisted steering oil circuit. The Servotronic valve restricts the hydraulic current and consequently reduces the hydraulic pressure.

The Servotronic valve is activated by a characteristic curve delivered by the SVT control unit.

System functions

The Servotronic is based upon the following system functions:

- Initialisation of the Servotronic
- Recording of the speed
- Supplying the Servotronic valve with power
- Undervoltage detection and overvoltage detection

Initialisation of the Servotronic

The Servotronic is active from terminal 15 ON.

A short initialization phase for the Servotronic (under 1 second) is necessary when the engine starts in order to reach the characteristic curve for a low road speed as fast as possible.

A plausibility check for supplying the Servotronic valve is performed during the initialization phase.

Recording of the speed

The road-speed signal is calculated by the DSC and supplied to the PT-CAN. The Servotronic specifies an acceleration value for plausibility of the road-speed signal. A road speed is calculated from the acceleration value.

At a low acceleration the road-speed signal supplied by the DSC is used.

At a higher acceleration the Servotronic control unit calculates the road speed internally. The road speed is stored in the Servotronic control unit.

Supplying the Servotronic valve with power

The Servotronic valve is supplied with power in response to the car's road speed. The power-assisted steering characteristic is memorized in a characteristic curve. The characteristic curve specifies the power based on the car's road speed.

The characteristic curve is written using 16 reference points.

The Servotronic valve is no longer supplied with power when the engine is OFF (over the PT-CAN). Minimum steering force support is set (high road speed) when the Servotronic valve is no longer supplied with power.

Equally, the Servotronic valve is also no longer supplied with power if there is a fault-memory entry.

Undervoltage detection and overvoltage detection

The Servotronic valve is no longer supplied with power under the following conditions:

- Supply voltage less than 9 volts
- Supply voltage higher than 17 volts

Voltage dips during ignition faults are detected.

SWITCH-ON CONDITIONS

Switch-on conditions for the Servotronic are:

- Terminal 15 ON

- The engine must be running

The Servotronic only activates the Servotronic valve when the engine is running.

When the engine has started and there a road-speed signal is not supplied the Servotronic sets the maximum steering force support.

If a plausible road-speed signal is detected the Servotronic valve is activated by the characteristic curve.

If there is still not a (or not a plausible) road-speed signal 5 seconds after the engine has started the minimum steering force support is set.

KINEMATIC DIAGNOSIS SYSTEM AND ENVIRONMENT

BMW KDS (Beissbarth)

Fig. 2: Kinematic Diagnosis System

Courtesy of BMW OF NORTH AMERICA, INC.

1. FOREWORD

1.1 Objectives

Wheel alignment has become an increasingly complex subject. The aim of this BMW Service Technology bulletin, therefore, is to achieve several objectives:

- Creation of guidelines for working with the BMW Kinematic Diagnosis System (KIDS).
- Familiarization with wheel alignment technology for current vehicles and clarifying any questions which arise in this connection.
- Transparency and clarification of different terms.
- Clarification of the causes of errors in the past, such that they can be avoided after reading this document.
- Creation of conditions for dealing safely with the BMW KIDS.

1.2 Further development of the BMW Kinematic Diagnosis System

- The BMW Kinematic Diagnosis System is an integrated part of automotive system concepts. It ensures that work is carried out in a particularly rational manner which is appropriate for BMW requirements, such that you can also be certain of being prepared for future technological developments. As far as precision and performance in wheel alignment and tuning is concerned, BMW, together with leading manufacturers, has made the best of what is technically feasible: the BMW Kinematic Diagnosis System.
- The BMW Kinematic Diagnosis System manufactured by Beissbarth is more than just the further development of conventional wheel alignment equipment. It sets new standards in precision, performance, speed and handling. It is a guarantor for the perfection which BMW service customers rely on.
- Ride comfort, road safety and tyre wear depend to a large extent on the perfect interplay of the vehicle's kinematic functions. BMW is constantly launching new generations of chassis which are even better than their predecessors. This is why there are fewer kinematics system adjusting points and narrower tolerances when measuring and tuning the chassis.
- With the use of the multi-link rear suspension and the E36, the electronic wheel alignment devices are no longer suitable for BMW wheel alignment purposes. This applies to both the measuring procedure and measuring precision. The generation of equipment which was approved with the E36 series still fulfils all the requirements placed on a modern wheel alignment device, including the use of the latest computer technology.
- Only BMW Kinematic Diagnosis Systems manufactured by Beissarath and Bosch may be used for wheel alignment.

1.3 Technical Data

Fig. 3: Display Kinematic Diagnosis System Technical Data
 Courtesy of BMW OF NORTH AMERICA, INC.

KINEMATIC DIAGNOSIS SYSTEM TECHNICAL DATA

1. Display	17" graphic screen with high-resolution graphics (640x480 pixels with 256 colours)
2. On-screen text	in the appropriate national language
3. Wheel dimensions	12"-20"
4. Vehicle memory locations	unlimited
5. Rotating plates	Loadbearing capacity 1000 kg, angle of rotation $\pm 360^\circ$, 450 x 450 x 50 mm (L x W x H), sliding range ± 50 mm, weight 18 kg
6. Sliding plates	Loadbearing capacity 1000 kg, angle of rotation $\pm 10^\circ$, 450 x 450 x 50mm (L x W x H), sliding range ± 65 mm, weight 17 kg
7. Electrical connection	100-115 V / 220-240 V 50/60 Hz, 0.5 kW (other connections on request)

1.4 Scope of delivery

- 1 PC display device with graphic screen, graphical tablet, small or large equipment cabinet including automatic charging station, DIN A4 dot matrix printer
- 4 Measuring sensors with CCD camera technology and infrared data transmission with built-in power supply
- 1 Cable set (comprising 4 cables)
- 1 Brake clamping device
- 1 Steering lock device

- 2 Electronic precision rotating plates with integrated sensor without access ramps
- 2 Sliding plates without access ramps
- 4 BMW quick-clamping units, comprising a P8-68 locating bell and P267 01 quick-acting clamp including coated holding claws
- 1 Operating instructions for BMW KIDS (8 languages)
- 1 BMW software and the BMW vehicle setpoint data with setting screens as well as text for the measurement preparations

1.5 Accessories required

- 2 Locating rods for positioning the vehicle
- 1 Set of sand bags for the prescribed loading

1.6 Accessories recommended

- 4 Quick-clamping units
- 2 Sets of access ramps
- 1 Remote control / display
- 1 Trolley (for ballast bags, rotating and sliding plates and 4 quick-acting clamps)

2. MEASURING OPTIONS USING THE BMW KINEMATIC DIAGNOSIS SYSTEM

2.1 Front axle

- Toe-in (single and total toe-in in relation to the geometrical drive axis)
- Camber (with steering wheel pointing straight ahead)
- Wheel displacement (in relation to the left-hand front wheel)
- Castor, kingpin inclination and toe-differential angle

2.2 Rear axle

- Toe-in (single and total toe-in in relation to the longitudinal center plane of the vehicle --> previously called symmetrical axis)
- Geometrical drive axis
- Camber

2.3 Other measuring options

- Rear wheel displacement
- Wheelbase difference
- Lateral displacement on right
- Lateral displacement on left
- Track difference

- Axial displacement

3. SYSTEM DESCRIPTION

3.1 BMW Kinematic Diagnosis System 1, based on the Beissbarth ML4000

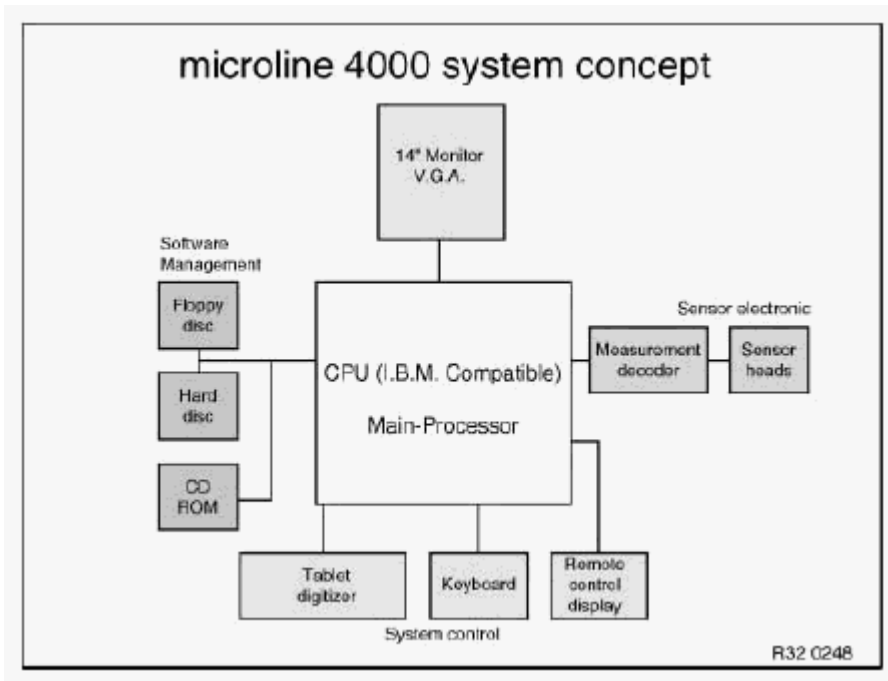

Fig. 4: BMW Kinematic Diagnosis System Diagram
Courtesy of BMW OF NORTH AMERICA, INC.

The KIDS 1 is available in two different designs at no extra charge:

1. MOBILE WORKSTATION

Fig. 5: Mobile Workstation
Courtesy of BMW OF NORTH AMERICA, INC.

2. MOBILE COMPACT CABINET

Fig. 6: Mobile Compact Cabinet
Courtesy of BMW OF NORTH AMERICA, INC.

The larger workstation offers a small storage area for accessories, while the compact cabinet is mobile and ideal for restricted working areas. Both variants can be supplied as a cableless measuring system (infrared). From the point of view of measuring technology, there is only a difference in the handling and equipping of the system. For both designs, the four measuring sensors are stored in integrated inserts with rechargeable battery charging points. When automatically charged over night, the measuring sensor batteries provide enough power for 10 hours of continuous use.

3.2 Computer

- The KIDS 1 system comprises tested and reliable industrial components. The computer is an IBM-compatible, 32-bit Intel processor with CD ROM drive to the industry standard.

Fig. 7: Computer
Courtesy of BMW OF NORTH AMERICA, INC.

3.3 Graphical tablet

- All functions are shown in graphical form on a "pictogram" panel. The panel is protected by a plexiglass

cover. It can easily be replaced if more extensive design modifications are necessary. The operator interface has no membrane and is thus protected against damage. The main functions are activated by clicking the icon with the digital pen.

Fig. 8: Graphical Tablet

Courtesy of BMW OF NORTH AMERICA, INC.

3.4 Equipment cabinet

- The PC with graphic monitor and removable operating panel, supports for the measuring sensors, the remote control and the A4 printer are integrated into the workstation. The charging station is located in the cabinet and can also be connected to the measuring sensors and the remote control using the plug-in cables (operating while simultaneously charging the batteries).

Fig. 9: Equipment Cabinet

Courtesy of BMW OF NORTH AMERICA, INC.

3.5 Remote display

A cableless remote display can be supplied on request. The remote control keys are only active during measuring and adjustment (not for customer data input, or if selecting a vehicle or editing the setpoint data etc.). The following displays are supported by the remote control:

- Measured value with setpoint / actual comparison and tolerance bar
- Steering graphics for steering routines
- Live overview of the track / camber values with a setpoint / actual comparison
- Rim run-out compensation

Fig. 10: Remote Display
 Courtesy of BMW OF NORTH AMERICA, INC.

3.6 Measuring sensors with CCD camera

The measuring sensors are each equipped for automatic measurement with two CCD cameras and their own processor for the cableless infrared transmission of data with integrated batteries. Benefits:

- No temperature deviation
- Very high measuring resolution (the track could theoretically be measured in angular seconds)
- Single track range of more than ± 9 degrees for the constant display of toe-in when changing the tie-rod ends
- Exact system accuracy, i.e. when carrying out measurements at the vehicle following rim run-out compensation, the toe-in and camber measurements are accurate to 2 angular minutes

Fig. 11: Measuring Sensors With CCD Camera
Courtesy of BMW OF NORTH AMERICA, INC.

3.7 BMW Quick-acting clamp

- BMW quick-acting clamp for holding the measuring sensors precisely in position and measuring without rim run-out compensation.

NOTE: Any existing quick-acting clamps, e.g. from older F1600s or ML-3000s, must not be used on the BMW KIDS.

Fig. 12: BMW Quick-Acting Clamp
Courtesy of BMW OF NORTH AMERICA, INC.

3.8 Rotating / sliding plates

- Electronic precision rotating plates for the front wheels with integrated sensor (360 degree measuring range)
- Stable sliding plates for the rear wheels with a swivelling / rotating top plate
- Accessories: Cover hood for aluminium rotating plates

Fig. 13: Rotating/Sliding Plates

Courtesy of BMW OF NORTH AMERICA, INC.

3.9 Sensor pins

- A new BMW light alloy wheel (styling no. 18) has been available as optional equipment from April 1993. When measurements are being made on vehicles with these wheels, new sensor pins are required for the quick-acting clamps of the recommended wheel alignment equipment.
- The new sensor pins are included in the scope of supply for new deliveries of KIDS 1 (order number: BS 90 19 11).

Fig. 14: Sensor Pins

Courtesy of BMW OF NORTH AMERICA, INC.

3.10 Spoiler adapter

- In the case of vehicles with very low spoilers, the sensor beam may be broken by the spoiler between the measuring sensors. This primarily occurs in front of the front axle.
- The spoiler adapter is used here as a connecting element between the measuring equipment clamp and the measuring sensor. Thanks to the adapter, the sensors are placed 50 mm lower, thus allowing the sensor beam to move freely below the spoiler.

Fig. 15: Spoiler Adapter

Courtesy of BMW OF NORTH AMERICA, INC.

3.11 Quick-clamping units

- Quick-clamping units for wheel alignment on non-BMW vehicles with rim run-out compensation.
- Rims without sensors boreholes (rims for BMW vehicles from other manufacturers)

Fig. 16: Quick-Clamping Units

Courtesy of BMW OF NORTH AMERICA, INC.

3.12 Retainers

- The most varied clamping options for the measuring equipment are possible thanks to the versatile retainers and the rubber - coated thrust pieces, even on exotic light-alloy rims.

Fig. 17: Retainers

Courtesy of BMW OF NORTH AMERICA, INC.

4. WORKSTATION

4.1 Environment

DESCRIPTION AND REQUIREMENTS REFERENCE

Description:	Requirements:
<p>All lifting platforms currently recommended by BMW (see) for wheel alignment meet the requirements for the BMW KDS.</p>	<ul style="list-style-type: none"> ○ Wheel alignment pits ○ Pillar-type lifts with set-down device ○ 2 plunger-type lifting platforms with set-down device
<p>No particular requirements have to be met in respect of the location at which the BMW KDS is used. The measuring device can be installed over working pits or on lifting platforms.</p>	<ul style="list-style-type: none"> ○ Repair stands with set-down device ○ One measuring area (approx. 4.5 m x 7.0 m). ○ The rotating plates must be pinned to the platform

The support surfaces for the rotating and sliding plates may only display the following maximum height difference:

- from left to right ± 0.5 mm
- from front to back ± 1.0 mm
- diagonally ± 1.0 mm.

Fig. 18: Rotating And Sliding Plates Height Difference
 Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: A difference in the height of the rotary plates of ± 2 mm from left to right results in a measuring error of 4.8° in the camber.

As a comparison: The camber tolerance on the E36 is $\pm 10'$. The tyre tread difference or varying tyre pressure cause measuring errors of the same magnitude.

4.2 Preconditions for alignment

When carrying out the wheel alignment, the front and rear wheels must be centered on the rotating and sliding plates in order that all wheel suspensions remain free of tension during the steering routine and adjustment work. As a result, the rotating and sliding plates for the relevant wheel bases and track widths of the vehicle to be aligned must be moved.

4.3 Measuring tolerance

All measuring tolerances are system tolerances. This means that the sum of all individual tolerances gives the value shown in the example. Example of camber: Quick-acting clamp + measuring sensor + computer = 1' at a measuring range of $\pm 3^\circ$ (all BMW vehicles are within this measuring range).

4.4 Levelling the measuring station

The manufacturers of the BMW KIDS (Beissbarth / Bosch) are able to measure the measuring area to the required accuracy using levelling devices. Any "normal" water level is not suitable for this. Lifting platforms must be levelled under load so that the uneven deflection in the travel rails is taken into account.

IMPORTANT: Adjustment work for the lifting platform concerned must be executed by a specialist (manufacturer's after - sales service).

5. CHASSIS-RELATED TERMS

5.1 Toe-differential angle

- The toe-differential angle (a) is the angular position of the internal wheel on the curve in relation to the external wheel on the curve when driving round bends. The steering is designed such that the angular position of the wheels in relation to each other changes as the steering angle increases.
- In ideal cases, the wheel axes meet at point D in any steering position (except for straight ahead).

Fig. 19: Toe-Differential Angle
Courtesy of BMW OF NORTH AMERICA, INC.

5.2 Camber

- The camber is the angle of inclination of the wheel in relation to the vertical.

Fig. 20: Camber Angle

Courtesy of BMW OF NORTH AMERICA, INC.

5.3 Toe-in

- The toe-in is the reduction in the distance between the front of the wheels and the rear. The toe-in prevents the wheels from moving apart while driving (wobbling and grinding).

Fig. 21: Toe-In

Courtesy of BMW OF NORTH AMERICA, INC.

5.4 Castor

- The castor is the kingpin angle seen from the side in the opposite direction of travel. The line through the center of the spring strut mount and control arm ball joint corresponds to the kingpin.

Fig. 22: Castor Angle
 Courtesy of BMW OF NORTH AMERICA, INC.

5.5 Geometrical drive axis / symmetrical axis

- (1) The geometrical drive axis is the line bisecting the angle of the overall rear wheel toe. The measurements of the front wheels relate to this axis.
- (2) The symmetrical axis represents the center line through the front and rear axes.

Fig. 23: Geometrical Drive Axis/Symmetrical Axis
 Courtesy of BMW OF NORTH AMERICA, INC.

5.6 Wheel displacement angle

- The wheel displacement angle is the angular deviation of the connecting line of the wheel contact points in relation to a line running at 90° to the geometrical drive axis. The wheel displacement angle is positive if the right - hand wheel is displaced to the front, and is negative if it is displaced to the rear.

Fig. 24: Wheel Displacement Angle
 Courtesy of BMW OF NORTH AMERICA, INC.

5.7 Kingpin offset

- The kingpin offset is the distance from the center of the wheel contact point to the contact point of the kingpin extrapolation.

Fig. 25: Kingpin Offset
 Courtesy of BMW OF NORTH AMERICA, INC.

6. WHEEL SUSPENSION

Those parts which connect the wheel to the mostly load-bearing floor elements of the bodywork and guide it in the required direction belong to the wheel suspension. They are connected by axles or other comparable structures and guided by the arms. The wheel suspension plays a decisive role in the handling characteristics of a vehicle. Two main groups have to be distinguished: 1. Rigid axle suspension and 2. Independent wheel suspension.

6.1 Rigid axle suspension

RIGID AXLE SUSPENSION ADVANTAGES AND DISADVANTAGES

Description	Advantages	Disadvantages
The rigid axle suspension has a rigid connection between both wheels or wheel	In the event of deflection taking place, there are no	Non-driven rear axles may also acquire negative camber

pairs. Any change in one wheel is more or less transferred to the other. It is now only fitted as a rear axle, if at all. However it is frequently used for lorries or busses.	changes to the camber or wheel toe. This means: less tyre wear and good track stability.	as well as increasing tyre lateral guidance, thus increasing tyre wear.
--	--	---

6.2 Independent wheel suspension

INDEPENDENT WHEEL SUSPENSION ADVANTAGES AND DISADVANTAGES

Description	Advantages	Disadvantages
State-of-the-art individual wheel suspension is available on BMW vehicles on the front and rear axles. This development has its cause in mass inertia, as a reduction in the non-suspended mass improves wheel and ground contact, and the wheel stays better on the road. Control arms and trailing arms, which have to absorb high longitudinal and lateral forces to some extent, are required for guiding independently suspended wheels.	Wheels suspended independently from each other have no mutual influence on each other.	Depending on the type, changes may occur in the camber, wheel toe, track width, castor and wheelbase.

7. WHEEL ALIGNMENT / PROCEDURE

7.1 Measuring options

An overview of all measuring options and values (VA = front axle, HA = rear axle) is shown below.

WHEEL ALIGNMENT SPECIFICATION

Measuring options	Measuring accuracy	In measuring range	Total measuring range
Total wheel toe (VA + HA)	±2'	± 2°	± 18°
Single wheel toe (VA + HA)	± 2'	± 2°	± 9°
Camber (VA + HA)	± 1'	± 3°	± 10°
Wheel displacement (VA)	±2'	± 2°	± 9°
Geometrical drive axis	± 2'	± 2°	± 9°
Castor	± 4'	± 18°	± 22°
Kingpin inclination	± 4'	± 18°	± 22°
Toe-differential angle	± 4'	± 20°	± 20°
Maximum steering angle (VA)	± 4'	± 60°	± 300°
Maximum steering angle (HA)	± 4'	± 9°	± 9°
Castor correction range	± 4'	± 7°	± 10°

NOTE: The measuring accuracy details only apply when using the precision rotating and sliding plates as well as the BMW quick-acting clamps.

7.2 Preparatory work

Before commencing the measurement, preparatory work must be carried out at the measuring area and on the vehicle. Preparatory work includes:

- Easy-running rotating and sliding plates
- Aligning the rotating and sliding plates in relation to the track width and wheelbase
- Centering the vehicle on the plates
- Applying the parking brake
- Removing the lock pins on the plates to prevent tension in the chassis under loading
- Checking the rim and tyre size, tread depth, tyre pressure, steering wheel play, wheel bearings and condition of suspension and shock absorbers
- Fastening the measuring equipment to the wheels
- Loading the vehicle according to BMW KIDS specifications
- Rock the vehicle firmly with the brakes released to ensure a stable center position
- Lock the service brake using the brake clamping device

7.3 Initial / final measurement

This measurement can be carried out as a program-guided measurement in the same way as any subsequent adjusting work and the final measurement. The sequence of the chassis measuring points to be called up is specified and controlled by the system software. The individual steps comprise:

- Driving straight ahead to correctly record the wheel toe and camber values for the rear axle
- Steering routine for recording the castor, kingpin inclination and toe-differential angle
- Recording the wheel toe and camber of the front axle (adjust the steering center point in advance)
- Steering routine for measuring the maximum steering angle on the left/right
- Checking the overview of measured values with the setpoint and actual comparison of all measured values

7.4 Printing out the data

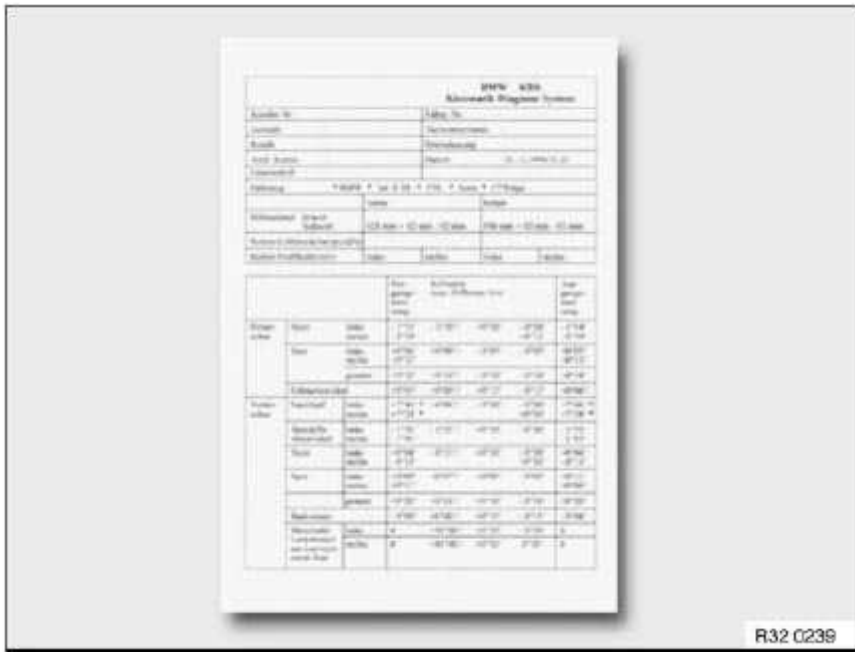

Fig. 26: Printing Layout Of Customer And Vehicle Identification Data
 Courtesy of BMW OF NORTH AMERICA, INC.

The report printout from the integrated DIN A4 printer is subdivided into three sections:

- Header lines with customer and vehicle identification data --> the customer data entered before beginning the measurement as well as vehicle data are printed out here.
- Centre section with vehicle data --> this includes the make, type, model and vehicle model year defined when the setpoint data record was selected. The values previously measured for height level, tyre pressure and tread depth are also printed in this section.
- The end section with all vehicle alignment values comprises the 3 columns initial measurement, setpoint values and output measurement. The measured values are recorded separately in these three columns.

8. SPECIAL FEATURES

8.1 Free wheel alignment

With free wheel alignment the selection and sequence of the measuring points is freely selectable. The following points must be observed for attaining the correct measurement results:

- Carry out all work in the same way as with the program-guided measurement.
- Before measuring the wheel toe and camber values for the rear axle, the steering must be in the "straight ahead" position to ensure that it is perfectly aligned in relation to the longitudinal center plane of the vehicle.
- Before measuring the single wheel toe values on the front axle, the center of steering must be established to ensure the correct position of the steering wheel.

8.2 System settings

The following settings must only be entered or set once: language, display format, date/time, advertising text, remote control with display, rotating plate selection and printer settings. They remain stored.

9. BMW KINEMATIC DIAGNOSIS SYSTEM COMPARISON (BOSCH - BEISSBARTH)

BMW KINEMATIC DIAGNOSIS SYSTEM COMPARISON (BOSCH - BEISSBARTH)

	Bosch	Beissbarth
Measured value recording	Infrared	CCD camera
Data transmission	Cable	Infrared / cable
Measuring sensor power supply	Cable	Battery / cable
Remote control	Infrared	Infrared
Remote control with measured value display	Cable	Infrared
Setpoint data memory	Floppy disk	Hard disk
Measured value memory	Always the last vehicle measured	Unlimited vehicle memory
Operating system	-	MS-DOS
Languages	English and one language on request	EN, DE, NI, SV, IT, FR, SP (further languages can be called up)
Update	3.5" floppy disk	3.5" floppy disk using TIS/DIS
Monitor	20"	17"
Computer	-	Pentium
Disk drives	2 x floppy disk	1 x floppy, 1 x CD ROM

10. CONTROL MODIFICATION (MENU)

10.1 Remote control with display

The following steps show how the remote control with display is activated:

1. Call up the "**Service**" menu in special functions ("S" key)
2. Call up the "**Remote control**" sub-menu in the "**Service**" menu.
3. Select the "**Remote control with display**" item in the "**Remote control**" sub-menu - this configuration is retained.

IMPORTANT: In the case of equipment without remote control, this must be configured to "No remote control".

10.2 Brief operating instructions

1. Activate the remote control with the "**ON**" button (it may also be switched on during alignment). The title page will appear on the LCD.
2. Select "**Straight ahead**" of the "**Initial measurement**", "**Adjustment work**" or "**Final measurement**" at the measuring equipment cabinet. The steering graphics for "**Straight ahead**" will appear on the LCD.

3. Use the **"Forward arrow"** to change to the next measurement image. Display blocks will appear on the LCD with the designation of the measured value and tolerance bar with the measured value. If the measured value is within the tolerance range, it is shown in dark figures against a light background. If the measured value is outside the tolerance range, it will be shown in inverse video (light figures against a dark background).
4. By pressing the **"F"** key shortly, you can move alternately between the designation of the measured value and the setpoint value with the tolerance inside the display blocks.
5. You can scroll through the measured values using the **"Forward arrow"**, **"Backward arrow"** and **"Cancel" (red dot)** keys. The function of these keys is identical to that of the keys on the graphics panel.
6. Even with **"Free alignment"**, it is possible to scroll through the measured values in the same way as with **"Program-guided alignment"**.
7. During measurement, the report print-out can be initiated using the **"Printer"** key. The remote control keys are only active during measurement and adjustment (not during customer data input, vehicle selection etc.).

10.3 Display support

- Measured values with a setpoint/actual comparison and tolerance bar (setpoint figures can be displayed with the **"F"** key)
- Steering graphics for steering routines
- Overview of measured values with current setpoint/actual comparison
- Rim run-out compensation
- With all other functions (e.g. customer input), the title illustration appears on the LCD display

NOTE: If the data transmission from the remote control to the computer is interrupted, the remote control icon in the bottom right-hand corner of the screen changes color from green to red and the illustration on the LCD display is shown inversely - black turns to white, white to black. This change does not take place in the title illustration. Once the line-of-sight connection has been re-established, the remote control continues to operate from the point of interruption in the program. A continuous visual connection during alignment is therefore not necessary.

- The **"Hour glass"** icon in the LCD display means: **"Please wait"**.
- The **"Battery"** icon in the top right-hand corner of the LCD display means that the battery reserve has been reached.
- To switch off the remote control: press the **"F"** key for 5 seconds, then return it to its charging unit or connect it to a charge cable. The title illustration will again appear as a charging check.
- If, during the measurement, the remote control has been placed back in the charging unit, it must be switched on again using the **"ON"** button.

11. UPDATING THE SOFTWARE / SETPOINT DATA

Floppy disks will no longer be sent to BMW partners who have acquired a **"BMW KIDS (Beissbarth / Bosch)"**.

For cost-related reasons, you can create these disks yourself on the "**DIS-tester**" or on the "**TIS/EPC server**". The data for this is regularly updated on the TIS CD.

11.1 REQUIREMENTS

- BMW KIDS (Beissbarth / Bosch)
- TIS CD program status (Beissbarth): from CD 12/95
- EPC program status: from 12/95
- TIS CD program status (Bosch): from CD 08/97
- DIS program status: from V6.0
- 3.5" diskettes, 1.44 MB (Beissbarth 5 diskettes / Bosch 1 diskette)

11.2 Procedure (Beissbarth)

1. Go to the "Administration" screen
2. Select the **KIDS button**
3. Select **Beissbarth**
4. Insert "**Diskette 1**" on request and confirm with "**OK**" (program diskette 1 of 2 is created, label it)
5. Insert "**Diskette 2**" on request and confirm with "**OK**" (program diskette 2 of 2 is created, label it)
6. Insert "**Diskette 3**" on request and confirm with "**OK**" (setpoint data diskette 1 of 3 is created, label it)
7. Insert "**Diskette 4**" on request and confirm with "**OK**" (setpoint data diskette 2 of 3 is created, label it)
8. Insert "**Diskette 5**" on request and confirm with "**OK**" (setpoint data diskette 3 of 3 is created, label it)
9. Perform update and/or setpoint data on the KIDS in the usual manner with the diskettes which have just been created.

11.3 Procedure (Bosch)

1. Go to the "Administration" screen
2. Select the **KIDS button**
3. Select **Bosch**
4. Label "**Diskette 3.1**", insert it into the drive on request and confirm with "**OK**" (2x) --> Setpoint data is copied to the diskettes.
5. Insert setpoint data diskette 3.1 into the 3.1 floppy disk drive, insert operating system diskette 3.0 into the 3.0 drive.
6. Switch on the machine in the usual manner.

IMPORTANT: When creating the KIDS diskettes, all data on the diskettes used is overwritten.

NOTE: In the event of an error, a corresponding message is shown and the program is cancelled completely. The procedure must be run from the beginning again and all data on the diskette will be deleted. A new diskette may have to be used.

12. CREATING, COPYING AND EDITING SETPOINT DATA

12.1 Copying

- Press the "C" button and select the vehicle to be copied.
- Select the "**Edit setpoint data**" menu item from the special functions. Create a new vehicle in the usual manner. The setpoint values for the last vehicle selected will appear in the data input screen. Enter the data and save the data record.

12.2 Creating

- Press the "C" button and select the "**Edit setpoint data**" menu item from the special functions. Create a new vehicle in the usual manner. An empty data input screen will appear. Enter the data and save the data record.

12.3 Editing

- Factory-programmed setpoint data can neither be deleted nor modified. If this data does need to be modified, a new vehicle with modified setpoint data must be created. New vehicles created by the user are identified by a "+" in the selection menu. These vehicles can be deleted by the user using the "-" key or modified using the " " key. These keys only appear if vehicles have been entered by the user.

13. SPECIAL FUNCTIONS

13.1 Customer-specific printer report header

The sub-item "**Customer-specific text**" must be called up in the "**Special functions**" menu. An input screen will appear on the monitor. This input screen must be filled out with the name and address and stored with the "S" screen key. The text entered is inserted into the report header.

13.2 Adjusting options

- Call up the "**Service**" menu in the special functions ("S" key).
- Select the "**Wheel toe adjustment**" item or the "**Camber adjustment**" item from the "**Adjustment**" sub-menu. The toe and camber adjustment program will guide the user step by step through the adjustment using text and images. The measuring deviation for each measuring sensor will be shown on the screen when the adjustment has been completed.
- You can store the adjustment values in the measuring sensor using the "**Store**" key or you can quit the program with the "**Red dot key**" without saving them (check). The adjustment values can be printed out.

13.3 Rotating plate test

- Call up the "**Service**" menu in the special functions ("S" key).
- Call up the "**Rotating plate**" item in the "**Service**" menu. Turn the left-hand and right-hand rotating plate and check the display on the screen. Important: The measuring range is ± 306 degrees.

13.4 Viewing and deleting customer entries from database

- Call up the menu item "**Delete**" in the "**Database**" menu in the special functions. The data input screen will appear. Fill in the search fields with the data to be deleted.
- Use the "-" button to delete this data record. A new data record can then be highlighted and deleted with the digital pen.
- You can scroll through the entire database with the "**Arrow up**" and "**Arrow down**" keys.
- You can quit the delete function by pressing the cancel key (red dot).

14. MODIFICATIONS WITHIN PROGRAM

Further modifications were carried out within the program which only slightly change the program sequence but which optimizes the alignment in respect of comfort and speed. This is described below:

- Optimization of the rim run-out compensation in respect of speed.
- Optimization of the steering routines: Highlighted values within the gate can still be corrected. The message "**Rotating plates not connected**" no longer causes the steering routine to be cancelled. Further measurements can be carried out after the rotating plates have been connected.
- Standardization of screen colors with the colors on the tablet.
- Addition of texts in several foreign languages.
- Elimination of program-related and cosmetic faults.
- Electronic water level.
- Omission of kingpin inclination measurement.

15. FAULTS

15.1 Tyre faults

TYRE FAULTS DESCRIPTION CHART

Fault	Effect
1 Wheel toe, camber, toe-differential angle and castor not correct	1 Severe tyre squeaking even at relatively low speeds
2 Excessive toe-in and excessive positive camber	2 Tyres are worn down on one outside edge in the longitudinal direction
3 Excessive negative camber	3 Tyre wear on inside edge
4 Worn front-axle suspension on front-wheel-drive vehicles	4 Increased noise / Vehicle pulls on one side when accelerating
5 Incorrect wheel alignment	5 Wheels scrubbing / Tyre surface shows feathering in the tread
6 Play in the suspension due to mechanical parts (suspension, steering)	6 Washout / Wobbling of front wheels
7 Tyre pressure too low	7 Outside tyre surface wear

15.2 Front axle faults

FRONT AXLE FAULTS DESCRIPTION CHART

Fault	Cause	Remedy
1. Toe deviation	a) Vehicle not in normal position	a) Correct height level
	b) Tie rod(s) bent	b) Replace tie rod(s)
	c) Tie rod ball joints worn	c) Replace tie rod(s)
	d) Rubber mount in control arm defective	d) Replace control arm
2. Camber deviation: The camber is fixed during the design stage and cannot be adjusted.	Rubber mount in control arm defective	Replace control arm
	b) Control arm deformed	b) Replace control arm
	c) Spring strut deformed	c) Replace spring strut
	d) Traction strut worn	d) Replace control arm
	e) Spring deflection too great	e) Replace coil spring, height level
	f) Front axle carrier deformed	f) Replace front axle carrier
	g) Spring strut mount deformed	g) Repair forward structure
	h) Distortion in the floor assembly (engine bracket)	h) Repair body
3. Castor deviation: The castor is fixed during the design stage and cannot be adjusted.	Rubber mount for tension / traction strut defective	Replace rubber mount
	b) Tension / traction strut deformed	b) Replace tension / traction strut
	c) Control arm deformed	c) Replace control arm
	d) Spring strut deformed	d) Replace spring strut
	e) Wheelhouse deformed (spring strut mount)	e) Repair forward structure
	f) Distortion in the floor assembly (engine bracket)	f) Repair body
4. Toe-differential angle deviation	Requirement: camber and castor are correct	
	Tie rods unevenly adjusted	Set wheel toe on left and right to identical values
5. Wheel displacement deviation	Requirement: Front wheels have same single toe in relation to the geometrical axis	
	a) Front axle carrier deformed	Replace front axle carrier
	b) Engine bracket deformed	b) Repair body
	c) Control arm deformed	c) Replace control arm
		d) Replace tension /

15.3 Rear axle faults

REAR AXLE FAULTS DESCRIPTION CHART

Fault	Cause	Remedy
1. Camber deviation	a) Vehicle not in normal position: spring deflection too great	a) Correct height level
	b) Rubber mount on rear axle carrier defective	b) Replace rubber mount
	c) Rear axle carrier deformed	c) Check rear axle carrier and replace, if necessary
	d) Control arm deformed	d) Check control arm and replace, if necessary
	e) Traction strut deformed	e) Check traction strut and replace, if necessary
	f) Distortion in the floor assembly	f) Repair body
	g) Swinging arm deformed	g) Replace swinging arm
2. Rear wheel position is not correct	a) Rear axle carrier has been shifted laterally	a) Check the rubber mounts on the rear axle carrier and replace, if necessary
	b) Distortion in the floor assembly	b) Repair body
3. Toe deviation	a) Vehicle not in normal position, i.e. spring deflection too great	a) Correct height level
	b) Rubber mount in rear axle carrier defective	b) Replace rubber mount
	c) Control arm deformed	c) Replace control arm
	d) Rubber mount and swinging arm defective	d) Replace swinging arm
	e) Rear axle carrier deformed	e) Check rear axle carrier and replace, if necessary
	f) Traction strut deformed	f) Check traction strut and replace, if necessary
4. Deviation from the geometrical drive axis	Requirement: Total wheel toe is correct	
	a) Distortion in the floor assembly	a) Repair body

Further details on the "Kinematic Diagnosis System" can be found in the operating instructions for the BMW KIDS (Beissbarth / Bosch).

Functional and system descriptions are not subject to change. Parts availability and immediate ordering availability cannot be derived from this information. The specialist departments will be providing further details at the relevant time.

Steering and Wheel Alignment - Special Tools - X3

32 STEERING AND WHEEL ALIGNMENT

32 1 020 SET OF TOOLS

Minimum set: Mechanical tools

Note: For changing wear parts on hydraulic lines (steering gear)

Series: E60, E61, E65, E66, E67, E83, RR1, RR2

Storage location: A45

SI number: 1 14 01 (766)

Order number: 32 1 020

Set of tools

Consisting of:

1 = 32 1 021 Slip bush

2 = 32 1 022 Thrust piece

3 = 32 1 023 Extractor

Fig. 1: Set Of Tools (32 1 020)

Courtesy of BMW OF NORTH AMERICA, INC.

32 1 030 LEVER

Minimum set: Mechanical tools

Note: For disconnecting hydraulic lines from steering gear and for locking adjustment unit (ASZE) at handbrake lever

Series: E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

Storage location: B45, C45

SI number: 1 14 01 (766)

Order number: 32 1 030

Lever

Fig. 2: Lever (32 1 030)

Courtesy of BMW OF NORTH AMERICA, INC.

32 1 060 DRIFT

In conjunction with: 00 5 500

Note: For rotary shaft seal of inner segment shaft in steering gear

Series: E24, E28, E30, E31, E32, E34, E36, E38, E38/3, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, E87, E90, E91, E92, E93, RR2

Storage location: B30

Order number: 32 1 060

Drift

Fig. 3: Drift (32 1 060)

Courtesy of BMW OF NORTH AMERICA, INC.

32 1 260 PLIERS

Note: For opening and fastening hose clamps

Series: E12, E21, E23, E24, E28, E30, E30/C, E30tou, E31, E32, E32/3, E34, E34tou, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, R50, R52, R53, RR1, RR2

SI number: 1 02 01 (667)

Order number: 32 1 260

Pliers

Fig. 4: Pliers (32 1 260)

Courtesy of BMW OF NORTH AMERICA, INC.

32 1 270 PLUGS (SET)

Minimum set: Mechanical tools

Note: 27-piece, 3x per size - For sealing off hydraulic lines for brakes, steering etc.

Series: E12, E21, E23, E24, E28, E30, E30/C, E30tou, E31, E32, E32/3, E34, E34tou, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E68, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, R50, R52, R53, R56, RR1, RR2

SI number: 1 14 01 (766)

Order number: 32 1 270

Plugs (set)

Fig. 5: Plugs (32 1 270)

Courtesy of BMW OF NORTH AMERICA, INC.

32 1 300 FORK

Minimum set: Mechanical tools

Note: For disconnecting hydraulic lines Engine: N73

Series: E60, E61, E65, E66, E67, E83

Storage location: B47

SI number: 1 05 03 (969)

Order number: 32 1 300

Fork

Fig. 6: Fork (32 1 300)

Courtesy of BMW OF NORTH AMERICA, INC.

32 3 030 SETTING TOOL

Minimum set: Mechanical tools

Note: For setting toe-in on rear axle - rear axle with KDS

Series: E36, E46, E83, E85, E86

Storage location: C36

SI number: 1 02 98(302)

Order number: 32 3 030

Setting tool

Fig. 7: Setting Tool (32 3 030)

Courtesy of BMW OF NORTH AMERICA, INC.

32 3 110 RELEASING TOOL

Minimum set: Mechanical tools

Note: For unlocking lock cylinder in steering wheel lock during removal

Series: E31, E32, E34, E36, E36/7, E38, E39, E46, E60, E61, E63, E64, E83, E85, E86, R50, R52, R53

Storage location: A31

SI number: 1 06 94 (801)

Order number: 32 3 110

Releasing tool

Fig. 8: Releasing Tool (32 3 110)

Courtesy of BMW OF NORTH AMERICA, INC.

32 3 140 SETTING TOOL

Minimum set: Mechanical tools

Note: For setting front camber.

Series: E38, E39, E46, E53, E65, E66, E67, E81, E83, E85, E86, E87, E90, E91, E92, E93

Storage location: C35

SI number: 1 15 05 (200)

Order number: 32 3 140

Setting tool

Consisting of:

5 = 32 3 145 Disc

Note: For adjusting camber on front axle

6 = 32 3 146 Spindle

7 = 32 3 147 Knurled screw

Fig. 9: Setting Tool (32 3 140)

Courtesy of BMW OF NORTH AMERICA, INC.

32 3 160 T-HANDLED SOCKET WRENCH WAF 38

Minimum set: Mechanical tools

Note: For setting camber on front axle

Series: E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E87, E90, E91, E92, E93

Storage location: A39

SI number: 1 15 99 (483)

Order number: 32 3 160

T-handled socket wrench WAF 38

Fig. 10: T-Handled Socket Wrench WAF 38 (32 3 160)
Courtesy of BMW OF NORTH AMERICA, INC.

32 4 000 FIXTURE

Note: For checking pump pressure in power steering system

Series: E12, E21, E23, E24, E28, E30, E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93

Order number: 32 4 000

Fixture

Consisting of:

1 = 32 4 001 Pressure gauge 16 bar

2 = 32 4 002 Pressure gauge 160 bar

3 = 32 4 003 Test fixture without pressure gauge

4 = 32 4 004 Line

5 = 32 4 005 Connecting piece

Note: For screwing into hydraulic pump / model series: E23, E46, E52, E53, E64, E65, E66, E85

6 = 32 4 006 Connecting piece

Note: For screwing into test fixture 32 4 003 / model series: E23, E46, E52, E53, E64, E65, E66, E85

7 = 32 4 007 Connecting piece M18x1.5

Note: For screwing into pressure regulator / model series: E32, E34

8 = 32 4 008 Connecting piece M14x1.5

Note: For screwing into test fixture / model series: E32, E34

9 = 32 4 009 Ball valve

11 = 32 4 011 Adapter M14 x 1.5

12 = 32 4 012 Adapter M16 x 1.5

Fig. 11: Fixture (32 4 000)

SUSPENSION

Steering and Wheel Alignment - Technical Data - X3

00 ELECTRONIC CHASSIS ALIGNMENT

32 00 CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83

TECHNICAL DATA - CHASSIS/WHEEL ALIGNMENT - NORMAL POSITION E83

Car loaded down to normal position		Vehicle with complete equipment for normal operation with: 2 x 68 kg on front seats (seats in central position); 1 x 68 kg on rear seat (center); 1 x 21 kg in luggage compartment (center) and full fuel tank.
------------------------------------	--	--

32 00 WHEEL ALIGNMENT E83 SERIES SPORT SUSPENSION (NOT LOW SLUNG)

TECHNICAL DATA - WHEEL ALIGNMENT E83 SERIES SPORT SUSPENSION (NOT LOW SLUNG)

<u>Observe test conditions, see 32 00 ... TEST CONDITIONS FOR CHASSIS/WHEEL ALIGNMENT CHECK .</u>		
Front axle:		
Total toe		0° 6' ± 12'
Camber (difference between left/right max. 30')		-20' ± 30'
Toe angle difference		(difference between left/right max. 30')
- with 20° lock on inside wheel		2° 16' ± 30'
Caster angle		(difference between left/right max. 30')
Front wheel displacement		0° ± 15'
Maximum wheel lock		
- Inside wheel		38°
- Outside wheel		31°
Rear axle:		
Total toe		0° 16' ± 12'
Camber (difference between left/right max. 15')		-2° ± 25'
Geometrical axis deviation		0° ± 12'

SUSPENSION

Steering and Wheel Alignment - Tightening Torques - X3

00 ELECTRONIC CHASSIS ALIGNMENT

32 00 STEERING

STEERING - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Steering gear to front axle carrier	E21			50 Nm
	E21 (power steering)			41 Nm
	E12, E23, E24			42 Nm
	E24 / from 5.82, E28, E31, E32, E34	M12		80 Nm
	E28, E30, E36, E46	M10		42 Nm
	E32/3 / 750iLs	M10 10.9		110 Nm
	E38	M10 8.8	Press steering gear outwards to stop on front axle support and first tighten both front screws.	42 Nm
	E38 / Ball-and-nut steering, E39 / Ball-and-nut steering	M10 10.9		62 Nm
	E39 / Rack-and-pinion steering gear, E52	M10	Replace screws	42 Nm
	E53	M12 10.9		
			Jointing torque	50 Nm
			Torque angle	90 °
	E60 / REAR END, E61 / REAR END, E63, E64, E65, E66, E67		Replace screws & nuts	
			Jointing torque	56 Nm
			Torque angle	90 °
	E61 / Four Wheel Drive, E60 / Four Wheel Drive	M12	Replace screws & nuts	120 Nm
	E83	M12	Replace screws & nuts	100 Nm
	E85, E86	M10	Replace screws & nuts	42 Nm

13 STEERING GEAR

32 13 POWER STEERING GEAR

POWER STEERING GEAR - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
6AZ Ring nut	E30	with 2.5 mm dia. wire		120 Nm
	E30	with 3.5 mm dia. wire		150 Nm
7AZ Valve housing to case	E30			18 Nm
8AZ Pressure piece cover	E30			18 Nm
9AZ Internal lines to steering gear	E30	M10		10 Nm
	E30 / E60 / E61 / E63 / E64 / E67	M12		20 Nm
	E65 / E66	M12		30 Nm
	E60 / E61 / E63 / E64	M18		25 Nm
	E65 / E66	M18		60 Nm
10AZ Coupling bolt with hexagon socket	E34 (AWD)			20 Nm
11AZ Pipe (pipe cringe) to steering gear	E30 / E36			8 Nm
12AZ Servotronic converter to power steering gear	E60 / E61 / E63 / E64 / E65 / E66 / E67 / E83			3 Nm

21 STEERING ARMS, TIE RODS, STEERING DAMPER

32 21 STEERING ARMS

STEERING ARMS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Tie rod to ball joint (castle nut)	E21			60 Nm
2AZ Tie rod / axial joint to rack	E21, E30		Replace retaining plate	75 Nm
	E34, E36		Replace retaining plate	71 Nm
	E39, E52			71 Nm
	E46, E85 / except S54, E86 / except S54			100 + 10 Nm
	E53, E60, E61, E63, E64, E65, E66, E67, E83, E85 / S54, E86 / S54			110 Nm
3AZ Tie rod end to				

steering knuckle / swivel bearing	E34 / Four Wheel Drive		Replace nut	50 Nm
	E36		Replace nut	36 Nm
	E38, E39, E52		Replace nut	65 Nm
	E46, E85, E86		Use of impact screwdriver not permitted! Replace nut	65 Nm
	E53, E60 / Four Wheel Drive, E61 / Four Wheel Drive, E67, E83		Replace nut	80 Nm
	E60 / REAR END, E61 / REAR END, E63, E64, E65, E66		Replace nut	165 Nm
4AZ Tie rod clamping screw	E38, E39			27 Nm
	E12, E23, E24, E28, E30, E31, E32, E34			14 Nm
5AZ Tie rod end to tie rod (clamping nut)	E34 / Four Wheel Drive, E36, E46, E85, E86			45 Nm
	E39, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83			51 Nm
6AZ Steering drop arm to steering gear	E32, E34 / Four Wheel Drive			59 Nm
	E23	M26	Tightening value may be exceeded up to correct position to locking plate	at least 180 Nm
	E12, E23, E24, E28	M22	Tightening value may be exceeded up to correct position to locking plate	at least 140 Nm
	E31			70 Nm
	E38, E39		Note direction of screw thread. In direction of travel: from left on LHD or from right on RHD vehicle	61 Nm
7AZ Steering guide arm to front axle carrier	E39			62 Nm
	E23, E24, E28, E31, E32, E34, E38	M10		42 Nm
	E12, E23, E24	M12		85 Nm
8AZ Track rod arm to strut	E12, E24(upto 5.82)		Bolts secured with: Wire	55 Nm
	E23, E24 (from 5.82), E28		Bolts secured with: Loctite No. 270 Clean threads of tapped bores and bolts.	62 Nm
	E31, E32, E34		Bolts secured with: Loctite No. 270 Clean threads of tapped bores and	110 Nm

			bolts.	
	E30 / M3		Bolts secured with: Loctite No. 270 Clean threads of tapped bores and bolts.	30 Nm
9AZ Tie rod arm to control arm	E12, E23, E24 (up to 5.82)			66 Nm
	E30 / M3			66 Nm
	E24 (from 5.82), E28, E31, E32, E34			93 Nm
10AZ Leading strut to tie rod arm	E23			93 Nm
11AZ Trailing strut to tie rod arm	E31, E32, E34			93 Nm

31 STEERING COLUMN

32 31 STEERING COLUMN

STEERING COLUMN - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Universal joint / coupling to steering gear / steering spindle	E12, E24 / until 5.82		Replace clamping screw	25 Nm
	E21, E23, E24 / from 5.82, E28, E30, E31, E32, E34, E46, E52, E60, E61, E63, E64, E65, E66, E67, E83		Recut thread Replace clamping screw	22 Nm
	E36, E38, E39		Recut thread Replace clamping screw	19 Nm
	E53 / Steel joint	M8 10.9	Recut thread Replace clamping screw	24 Nm
	E53 / Aluminium joint	M8 10.9	Recut thread Replace clamping screw	28 Nm
	E85, E86	M8	Recut thread Replace clamping screw	30 Nm
2AZ Bearing block for steering column adjustment to instrument panel carrier and pedal bearing block	E31, E32, E34	M8		22 Nm
3AZ Hexagon screw to bearing				

block for steering column adjustment	E12, E24 / until 5.82	M10 x 115		25 Nm
	E28, E24 / from 5.82	M8 x 110		22 Nm
	E23	M10 x 170		27 Nm
	E31, E32, E34		Observe repair instruction.	
	E38, E39, E53	M8	Adjustment lever in clamped position	3.0 Nm
	E46, E83	M8	Value 1	4.0 Nm
			Value 2	4.8 Nm
	E85, E86	M8	Adjusting lever without needle bearing	6 Nm
			Adjusting lever with needle bearing	3.2 Nm
4AZ Clamp / shackle for outer steering tube	E12, E21, E24, E28			22 Nm
	E23			10 Nm
5AZ Airbag: Steering column to holder	E23, E24, E28			18 Nm
6AZ Steering column to instrument panel / support tube	E60, E61, E63, E64, E65, E66, E67, E83, E85, E86			21 Nm
7AZ Steering column to dashboard	E12, E23, E24, E28			14 Nm
8AZ Sliding piece (screw / nut)	E46			9.5 Nm
9AZ Control unit, steering column (CIM) to steering column	E65, E66, E67			2.5 Nm
10AZ Bracket for sleeve to body	E85, E86	M6		2.4 Nm
	E83	M6		2.8 Nm
11AZ Cable holder to steering column	E46	M5 (silver)		8.8 Nm
	E46	M5 (black)		4 Nm
12AZ Electric drive to steering column	E65, E66	M6		8 Nm
	E60, E61, E63, E64			6 Nm
13AZ Steering spindle to double universal joint / universal joint	E53, E65, E66, E67, E83		Recut thread Replace clamping	28 Nm

			screw	
14AZ Universal joint with corrugated tube to steering gear	E65, E66, E67		Recut thread Replace clamping screw	22 Nm
15AZ Bearing block of steering column to bulkhead	E83	M8	Replace nuts	21.4 Nm
16AZ Steering column to bearing block	E83	M6	Stick in nut again	8.8 Nm
17AZ Steering spindle middle section to assembly partition wall	E60 / Four Wheel Drive, E61 / Four Wheel Drive			6 Nm

33 STEERING WHEEL

32 33 STEERING WHEEL

STEERING WHEEL - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Steering wheel to steering column	E12, E21, E24, E23, E28, E30	Nut		80 Nm
	E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86	Screw		62.5 Nm
2AZ Retaining plate to steering wheel	E60, E61, E63, E64	M5		6 Nm
3AZ Voltage regulator to steering wheel	E60, E61	M5x12	Replace screws	3 Nm
4AZ Engine electrics, Lane Departure Warning, to steering wheel	E60, E61	M5x12	Replace screws	4 Nm

34 STEERING WHEEL FOR AIRBAG

32 34 AIRBAG AND AIRBAG STEERING WHEEL

AIRBAG AND AIRBAG STEERING WHEEL - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Airbag unit to steering wheel	E23 / E24 / E28 / E30 / E31 / E32 / E34		Airbag unit I	8 Nm
	E36 / E38 / E39 / E46		Airbag unit II	2 Nm
	E53 / E83	M6		8 Nm

41 PUMP AND OIL SUPPLY

32 41 PUMP AND OIL SUPPLY

PUMP AND OIL SUPPLY - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Power steering pump / bearing block of power steering pump to crankcase / oil sump / oil filter unit carrier / A / C compressor carrier	E39 / M5		Observe tightening sequence	25 Nm
	E46 / M57TU, E53 / M57TU, E60 / M57TU / M57T2, E61 / M57TU / M57T2, E65 / M57TU / M57T2, E66 / M57T2, E83 / M47T2 / M57TU / M57T2	M6		8 Nm
	E65 / N62 / N73, E66 / N62 / N73, E67 / N62 / N73	M8	Replace nuts	21 Nm
	E60 / N52 / N53, E61 / N52 / N53, E63 / N52 / N53, E64 / N52 / N53, E65 / N52, E66 / N52, E83 / N52	M10 x 33	Replace aluminium screws Observe repair instruction	
			Jointing torque	20 Nm
			Torque angle	90 °
	E60 / N54, E61 / N54	M10	Observe repair instruction	38 Nm
	E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83		Note shims, refer also to Service Information Gr. 32	21 Nm
	E85 / S54, E86 / S54	M8		21 Nm
2AZ Pump bracket on engine support	E38 / M60 / 1 / M60 / 2 / M62, E39 / M62			22 Nm
3AZ Hydraulic line connections to vane pump / power steering pump and steering gear / banjo bolts, steering hydraulics	E38	Banjo bolt M12	Replace sealing rings	33 Nm
	E36, E39, E46, E52	Banjo bolt M14	Replace sealing rings	35 Nm
	E38	Banjo bolt M14	Replace sealing rings	39 Nm
	E53, E60, E61, E63, E64, E65, E66, E85 / S54, E86 / S54	Banjo bolt M14	Replace sealing rings	33 Nm
	E36, E38, E39, E46 / S54, E52	Banjo	Replace sealing	40 Nm

		bolt M16	rings	
	E46 / N40 / N42 / N45 / N46	Banjo bolt M16	Replace sealing rings	42 Nm
	E53, E60, E61, E63, E64, E65, E66	Banjo bolt M16	Replace sealing rings	39 Nm
	E83 / N46, E85 / S54, E86 / S54	Banjo bolt M16	Replace sealing rings	35 Nm
	E38, E53	Banjo bolt M18	Replace sealing rings	45 Nm
	E36, E38, E39, E46, E53, E60, E61, E63, E64, E83	Cap screw	Replace sealing ring	36 Nm
	E65, E66, E67	Cap screw	Replace sealing ring	39 Nm
4AZ Hydraulic line connections to DS controller	E31, E32, E34			40 Nm
5AZ Mounting of hydraulic line	E60, E61, E63, E64, E65, E66, E67	M6	Screw, nut or rubber-metal body	7.5 Nm
	E60, E61, E65, E66, E67	M8	Screw, nut or rubber-metal body	19 Nm
	E83, E85 / S54, E86 / S54	M6	Screw, nut or rubber-metal body	8 Nm
6AZ Holder, expansion hose, to vane pump / power steering pump	E60, E61, E63, E64, E65, E66	M6 8.8		7.5 Nm
	E65 / M67	M8-8		19 Nm
7AZ Mounting hydraulic pump to engine block / oil sump	E65			3 Nm
8AZ Oil reservoir to body (Dynamic Drive / active front steering)	E60, E61	M6		5.5 Nm
9AZ Oil reservoir to holder	E60, E61, E63, E64, E67, E83	M6		4 Nm
	E85 / S54, E86 / S54	M6		5.5 Nm
10AZ Expansion hose part 1 to part 2	E60, E61, E63, E64, E65, E66			30 Nm
11AZ Expansion hose mounting	E60	M6		10 Nm
12AZ Line fastening steering hydraulics	E60	M6		7.5 Nm
	E60	M8		19 Nm
13AZ Oil tank holder to body	E83	M8		19 Nm
14AZ Belt pulley to power steering pump	E60, E61, E63, E64, E65, E66, E67	M8 8.8		22 Nm
	E39, E46, E53, E65, E66, E67	M8 10.9		27 Nm
	E83 / M54 / N46	M8		28 Nm

	E83 / M57TU / M57T2 / M47T2, E85 / S54, E86 / S54	M8		22 Nm
15AZ Bracket, pressure line, Dynamic Drive, to oil sump	E65 / M57TU / M57T2, E66 / M57T2			19 Nm
16AZ Bracket, pressure line, to steering gear	E60, E61, E63, E64	M8		19 Nm
17AZ Bracket, hydraulic line, to stabilizer bar mounting	E60, E61, E63, E64	M6		12 Nm
18AZ Bracket, power steering pump, to crankcase	E63 / N52, E64 / N52	M10	Replace aluminium screws	
			Jointing torque	20 Nm
			Torque angle	90 °
19AZ				
20AZ Power steering pump to water pump	E46 / N40 / N42 / N45 / N46	M8		32 Nm
	E83 / N46	M8		28 Nm
21AZ Bracket, pressure line (ARS), to crankcase	E63 / N52, E64 / N52	M10	Replace aluminium screws	
			Jointing torque	20 Nm
			Torque angle	90 °
	E60 / N52, E61 / N52, E63 / N52, E64 / N52, E65 / N52, E66 / N52	M8x17.5	Replace aluminium screw	
			Jointing torque	8 Nm
			Torque angle	45 °
22AZ Pressure line to power steering gear	E85 / S54, E86 / S54	M14	Replace sealing rings	33 Nm
23AZ Return line to power steering gear	E85 / S54, E86 / S54	M16	Replace sealing rings	35 Nm

SUSPENSION

Front Axle - Special Tools - X3

31 FRONT AXLE

31 1 050 TOOL

Note: For removing and installing silentblocks in control arms and compression struts.

Series: E24, E28, E32, E34, E53, E83

Storage location: B32

Order number: 31 1 050

Tool

Consisting of:

1 = 31 1 051 Thrust sleeve

Note: For removing and installing silentblocks in control arm.

3 = 31 1 053 Thrust sleeve

Note: For bracing compression strut. Model series: E24, E28, E32, E34

31 1 054 Thrust sleeve

Note: For bracing control arm and for removing and installing silentblocks in compression strut.

Fig. 1: Tool (31 1 050)

Courtesy of BMW OF NORTH AMERICA, INC.

31 1 060 TEST FIXTURE

Minimum set: Mechanical tools

Note: For testing wheel guide joints on front axle.

Series: E46, E53, E83, E85, E86

SI number: 1 13 02 (933)

Order number: 31 1 060

Test fixture

Consisting of:

1 = 31 1 061 Bracket

2 = 31 1 062 Sensor with plug

3 = 31 1 063 Magnetic retainer E46

4 = 31 1 064 Evaluation electronics unit

5 = 31 1 065 Magnetic retainer E53

6 = 31 1 066 Plug-in tool

7 = 31 1 067 Bracket

10 = 31 1 071 Contour disc

Note: For securing magnetic retainer 31 1 063 to cover of wheel control joint E46 (M3). SI 01 09 06 (261)

In conjunction with: 31 1 079

11 = 31 1 072 Contour disc

Note: For securing magnetic retainer 31 1 063 to cover of wheel control joint E85.

In conjunction with: 31 1 079

19 = 31 1 079 Adhesive dots (adherent on both sides), 10 x

31 1 068 Cardboard box with insert

31 1 069 Instructions for use

Fig. 2: Test Fixture (31 1 060)

Courtesy of BMW OF NORTH AMERICA, INC.

31 1 140 OPEN-END WRENCH WAF 16/18

Minimum set: Mechanical tools

Note: For bracing ball joint of hinged bracket.

Series: E81, E83, E85, E87, E90, E91, E92, E93

Storage location: C47, C48

SI number: 1 24 03 (040)

Order number: 31 1 140

Open-end wrench WAF 16/18

Fig. 3: Open-End Wrench WAF 16/18 (31 1 140)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 100 FIXTURE

Minimum set: Mechanical tools

Note: For detaching drive flange from all rear differentials

Series: E28, E30, E31, E32, E36, E36/7, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

Transmission: Rear diff. 188kom, rear diff. 220kom, rear diff. type G, rear diff. type K, rear diff. type M

Storage location: C7

Order number: 31 2 100

Fixture

Consisting of:

1 = 31 2 101 Spindle

Note: All rear differentials

2 = 31 2 102 Frame

Note: All rear differentials

3 = 31 2 103 Pull-off plate

Note: Model series: E28

4 = 31 2 104 Pull-off plate

Note: Model series: E30 and all rear differentials

6 = 31 2 106 Thrust piece

Note: Model series: E31, E32, E36

Fig. 4: Fixture (31 2 100)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 110 FIXTURE

Minimum set: Mechanical tools

Note: For installing front wheel bearing unit special tool 31 2 113 for E67 and RR

Series: E28, E36, E46, E53, E60, E61, E67, E83, E85, E86, E90, E91, E92, RR1

Storage location: B6

Order number: 31 2 110

Fixture

Consisting of:

1 = 31 2 111 Spindle

Note: With guide sleeve

2 = 31 2 112 Thrust sleeve

3 = 31 2 113 Nut with bearing

Fig. 5: Fixture (31 2 110)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 200 EXPANDER TOOL

Minimum set: Mechanical tools

Note: For expanding wheel carrier (front axle) while disassembling McPherson strut

Series: E38, E39, E46, E52, E65, E66, E67, E83, E85, E86

Storage location: B21

SI number: 1 06 94(801)

Order number: 31 2 200

Expander tool

Fig. 6: Expander Tool (31 2 200)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 210 SOCKET WRENCH SOCKET WAF 21

Minimum set: Mechanical tools

Note: For releasing shock absorber threaded connection (front axle with EDC)

Series: E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E83, E85, E86, E87, E90, E91, E92, E93, R50, R52, R53

Storage location: C18

SI number: 1 06 94 (801)

Order number: 31 2 210

Socket wrench socket WAF 21

Fig. 7: Socket Wrench Socket WAF 21 (31 2 210)
Courtesy of BMW OF NORTH AMERICA, INC.

31 2 220 SUPPORT PLATE

In conjunction with: 00 2 030 (not included in minimum kit)

Note: For supporting front axle and exhaust system during installation work

Series: E12, E21, E23, E24, E28, E30, E30/C, E30tou, E31, E32, E32/3, E34, E34tou, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E68, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, R50, R53, RR1

Storage location: B37

SI number: 1 06 94 (801)

Order number: 31 2 220

Support plate

Fig. 8: Support Plate (31 2 220)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 230 SOCKET

Minimum set: Mechanical tools

Note: For expanding steering knuckle during spring strut removal

Series: E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93

Storage location: C47

SI number: 1 05 03 (969)

Order number: 31 2 230

Socket

Fig. 9: Socket (31 2 230)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 240 PULLER

Minimum set: Mechanical tools

Note: For removing control arms from steering knuckle.

Series: E38, E39, E52, E53, E60, E61, E70, E83, E90, E91, E92, R50, R52, R53, RR1, RR2

Storage location: A11, B11

SI number: 1 06 94 (801)

Order number: 31 2 240

Puller

Consisting of:

1 = 31 2 241 Upper part

2 = 31 2 242 Lower part

3 = 31 2 243 Spindle

4 = 31 2 244 Pressure screw

5 = 31 2 245 Straight pin

6 = 31 2 246 Lower part

Note: For forcing control arm off wheel guide joint E53, E83

7 = 31 2 247 Lower part

Note: For forcing control arm off wheel guide joint E70. SI 1 01 07 (333)

Fig. 10: Puller (31 2 240)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 260 PRESSURE SLEEVE TOOL

Minimum set: Mechanical tools

Note: For removing and installing rubber mounts in tension and pressure struts and in control arms (E46/5)

Series: E38, E39, E46/5, E53, E83, E85, E86

Storage location: A35

SI number: 1 03 99(418)

Order number: 31 2 260

Pressure sleeve tool

Consisting of:

1 = 31 2 261 Thrust sleeve

Note: For bracing during removal and installation. Model series: E38, E39, E83 For removing and installing rubber mounts in control arms / model series: E46/5

In conjunction with: 31 2 134 (E46/5)

3 = 31 2 263 Thrust sleeve

Note: For removal and installation Model series: E38, E39

4 = 31 2 264 Thrust sleeve

Note: For removal and installation. Model series: E53, E83

Fig. 11: Pressure Sleeve Tool (31 2 260)
Courtesy of BMW OF NORTH AMERICA, INC.

31 2 300 EXTRACTOR

Minimum set: Mechanical tools

Note: For pressing steering tie rod off wheel carrier.

Series: E60, E61, E83, E90, E91, E92

Storage location: C48

SI number: 1 24 03 (040)

Order number: 31 2 300

Extractor

Consisting of:

1 = 31 2 301 Pressure bolt

2 = 31 2 302 Lower section

3 = 31 2 303 Upper section

4 = 31 2 304 Spindle and dowel pin

Fig. 12: Extractor (31 2 300)

Courtesy of BMW OF NORTH AMERICA, INC.

31 2 310 EXTRACTOR

Minimum set: Mechanical tools

Note: For pressing steering tie rod off wheel carrier.

Series: E60, E61, E83, E90, E91, E92, R56

SI number: 01 23 06 (308)

Order number: 31 2 310

Extractor

Consisting of:

1 = 31 2 311 Pressure bolt

2 = 31 2 312 Lower section

3 = 31 2 313 Upper section

4 = 31 2 314 Spindle and dowel pin

Fig. 13: Extractor (31 2 310)

Courtesy of BMW OF NORTH AMERICA, INC.

31 3 030 PRESS-IN AND PRESS-OUT TOOL

Minimum set: Mechanical tools

Note: For rubber bearings on trailing arm

Series: E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E87, E90, E91, E92, E93

Storage location: B46

SI number: 1 14 01 (766)

Order number: 31 3 030

Press-in and press-out tool

Consisting of:

1 = 31 3 031 Thrust piece

2 = 31 3 032 Bushing

Fig. 14: Press-In And Press-Out Tool (31 3 030)
Courtesy of BMW OF NORTH AMERICA, INC.

31 3 140 PIN WRENCH

Note: For loosening and tightening McPherson strut threaded connection when replacing shock absorber

Model: 2002

Order number: 31 3 140

Pin wrench

Fig. 15: Pin Wrench (31 3 140)
Courtesy of BMW OF NORTH AMERICA, INC.

31 3 210 SPANNER

Minimum set: Mechanical tools

Note: For releasing and tightening piston rod in shock absorber support bearing - model year: from 92

Series: E31, E32, E34, E36, E38, E39, E83

Storage location: A21

SI number: 1 10 91 (443)

Order number: 31 3 210

Spanner

Fig. 16: Spanner (31 3 210)

Courtesy of BMW OF NORTH AMERICA, INC.

31 3 340 SPRING TENSIONER

Minimum set: Mechanical tools

Note: For tensioning coil springs when removing and installing spring strut. Used only in conjunction with repair instructions.

Series: E31, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, R50, R52, R53, R56

Storage location: Single

SI number: 1 11 99 (438)

Order number: 31 3 340

Spring tensioner

Consisting of:

1 = 31 3 341 Spring tensioner, individual

2 = 31 3 342 Replacement pin

Fig. 17: Spring Tensioner (31 3 340)
Courtesy of BMW OF NORTH AMERICA, INC.

31 3 350 SPRING HOLDER

Minimum set: Mechanical tools

In conjunction with: 31 3 340 and 31 3 360

Note: For locating coil springs during tensioning. No. 31 3 350 reserved for consecutive sub-number spring tensioner 31 3 340.

Series: E31, E36, E36/7, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, R50, R52, R53, R56

Storage location: Single

SI number: 1 11 99 (438)

Order number: 31 3 350

Spring holder

Consisting of:

1 = 31 3 351 Spring retainer (2 x)

Note: For use only with repair instructions

2 = 31 3 352 Spring retainer (2 x)

Note: For use only with repair instructions

3 = 31 3 353 Spring retainer (2 x)

Note: For use only with repair instructions

4 = 31 3 354 Spring retainer ring

Note: For use only with repair instructions

5 = 31 3 355 Spring retainer

Note: For use only with repair instructions

6 = 31 3 356 Centering ring

Note: For use only with repair instructions

7 = 31 3 357 Spring retainer (2 x)

Note: For use only with repair instructions.

In conjunction with: 31 3 340

8 = 31 3 381 Spring retainer ring

Note: For use only with repair instructions.

9 = 31 3 382 Spring retainer

Note: For use only with repair instructions.

10 = 31 3 358 Insert ring

Note: For use only with repair instructions. For insertion in spring retainer ring 31 3 354. Model series: E87

11 = 31 3 383 Spring retainer

Note: To be used with repair instructions only.

Fig. 18: Spring Holder (31 3 350)

Courtesy of BMW OF NORTH AMERICA, INC.

31 3 358 INSERT RING

Note: For inserting spring retainer ring 31 3 354 model series (PL2)

Order number: 31 3 358

Insert ring

31 4 050 TAKE-UP SET

In conjunction with: 00 2 030 Hydr. lifter, 00 2 040 Basic take-up

Note: Take-up of front axle

Series: E70, E81, E83, E87, E90, E91, E92, E93, R56

SI number: 1 24 03 (040)

Order number: 31 4 050

Take-up set

Consisting of:

1 = 31 4 051 Take-up fixture 1 and 2

2 = 31 4 052 Take-up fixture 3 and 4

Note: Model series: E83

Fig. 19: Take-Up Set (31 4 050)

Courtesy of BMW OF NORTH AMERICA, INC.

31 5 110 REMOVAL FORK

Note: For removing output shaft from front axle gearbox (AWD)

Series: E53, E60, E61, E83, E90, E91, E92

SI number: 1 17 05 (212)

Order number: 31 5 110

Removal fork

Fig. 20: Removal Fork (31 5 110)

Courtesy of BMW OF NORTH AMERICA, INC.

31 5 130 SET OF IMPACT DRIFTS

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seals of output shafts at front axle differential

Series: E46/16, E53, E60, E61, E70, E83, E90, E91, E92

Storage location: C40

SI number: 1 15 99 (483)

Order number: 31 5 130

Set of impact drifts

Fig. 21: Set Of Impact Drifts (31 5 130)

Courtesy of BMW OF NORTH AMERICA, INC.

31 5 220 SUPPORT

Note: For securing wheel hub when removing and installing spring strut.

Series: E46, E70, E83, E85, E86, E90, E91, E92, R56, RR1, RR2

SI number: 1 23 05 (224)

Order number: 31 5 220

Support

Fig. 22: Support (31 5 220)

Courtesy of BMW OF NORTH AMERICA, INC.

31 5 250 UNIVERSAL AXLE BRACKET

In conjunction with: 00 2 030

Note: For accommodating all front and rear axles during removal and installation.

Series: E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, E87, E90, E91, E92, E93, RR1

SI number: 1 24 06 (309)

Order number: 31 5 250

Universal axle bracket

Consisting of:

1 = 31 5 251 Basic unit

2 = 31 5 252 Telescopic supports (4 x)

3 = 31 5 253 Mounting adapter, U-profile (2 x)

4 = 31 5 254 Mounting adapter (2 x)

5 = 31 5 255 Mounting adapter for bores (2 x)

6 = 31 5 256 Mounting adapter for bores (2 x)

7 = 31 5 257 Tensioning strap

4AZ Front axle carrier with reinforcement to engine carrier	E31			47 Nm
5AZ Cruciform reinforcement to door sill	E31			42 Nm
6AZ Reinforcement to bracket body	E31			42 Nm

7AZ Reinforcement (sleeve) to body	E31			127 Nm
8AZ Front end reinforcement on front axle carrier/engine carrier	E46		Replace screws; first tighten down rear screws	
			Jointing torque	59 Nm
			Torque angle	90+30 °
9AZ Reinforcement plate to front axle support/engine carrier	E53		Replace screws & nuts	
			Jointing torque	56 Nm
			Torque angle	90 °
	E60 / REAR END, E61 / REAR END, E63, E64, E65, E66, E67		Replace screws & insertion nuts	56 Nm
			Jointing torque	56 Nm
			Torque angle	90 °
	E60 / Four Wheel Drive, E61 / Four Wheel Drive		Replace screws	
			Jointing torque	56 Nm
			Torque angle	90 °
	E83	M10	Replace screws	74 Nm
10AZ Adapter to body	E46 / Four Wheel Drive		Replace screws	59 Nm
11AZ Front axle support to adapter	E46 / Four Wheel Drive		Replace screws	110 Nm
12AZ Heat shield to front axle carrier	E60, E61, E63, E64			8 Nm
13AZ Mounting bracket to front axle carrier / engine carrier	E60 / Four Wheel Drive, E61 / Four Wheel Drive	M8 x 26		19 Nm

12 STRUTS WITH RUBBER MOUNTS

31 12 CONTROL ARMS AND STRUTS

CONTROL ARMS AND STRUTS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Tension strut to front axle support	E12, E24 / until 5.82		tighten in normal position	80 Nm
	E23		tighten in normal position	135 Nm
	E39, E52		tighten in normal position	110 Nm
			Replace screw tighten in	

	E53		normal position	165 Nm
	E60, E61, E63, E64, E65, E66, E67	M12 10.9	Replace screw & nut tighten in normal position	
			Jointing torque	100 Nm
			Torque angle	90 °
	E83		Replace screw tighten in normal position	
			Jointing torque	165 Nm
			Torque angle	90 °
2AZ Control arm to front axle support	E24 / from 5.82, E28, E31, E32, E34, E38, E39 / 8 cyl.		tighten in normal position	77,5 Nm
	E39 / 6 cyl., E52		tighten in normal position	110 Nm
	E12, E21, E23, E24 / until 5.82		tighten in normal position	85 Nm
	E53, E60, E61, E63, E64, E65, E66, E67, E83	M12 10.9	Replace screw & nut tighten in normal position	
			Jointing torque	100 Nm
			Torque angle	90±15°
3AZ Control arm (ball joint) on front axle support	E30		Replace nut	85 Nm
	E36, E46		Replace nut	90 Nm
	E30 / Four Wheel Drive		Replace nut	100 Nm
	E85, E86	M14x1.5	Replace nut	80 Nm
4AZ Control arm to spring strut	E21, E30			65 Nm
5AZ Control arm to pivot mount/spring strut	E30 / Four Wheel Drive			85 Nm
	E30 / Four Wheel Drive	Polystop nut		93 Nm
	E34 / Four Wheel Drive			80 Nm
6AZ Control arm on steering knuckle/swivel bearing	E36, E46, E85, E86		Use of impact screwdriver not permitted! Replace nut	65 Nm
	E38		Replace nut	93 Nm
	E39, E53, E52, E83, E60 / Four Wheel Drive, E61 / Four Wheel Drive, E67		Replace nut	80 Nm
	E60 / REAR END, E61 / REAR END, E63, E64, E65, E66		Replace nut	165 Nm
7AZ Bracket for control arm				

to engine carrier	E30			42 Nm
	E36			47 Nm
	E46		Replace screws	59 Nm
	E85, E86	M10 10.9	Replace screws	56 Nm
8AZ Ball joint for control arm to front axle carrier	E34 / Four Wheel Drive, E46 / Four Wheel Drive			77 Nm
9AZ Control arm to ball joint	E34 / Four Wheel Drive, E46 / Four Wheel Drive			80 Nm
10AZ Control arm holder to front axle support	E34 / Four Wheel Drive			47 Nm
	E46 / Four Wheel Drive		Replace screws	59 Nm
11AZ Pressure strut to body	E24 / from 5.82, E28		tighten in normal position	130 Nm
12AZ Traction strut on tie rod lever/steering knuckle/swivel bearing	E24, E28 / from 5.82, E31, E32, E34, E38			93 Nm
	E39			80 Nm
13AZ Pressure strut to connecting pipe/front axle support	E31, E32, E34, E38, E39		tighten in normal position	127 Nm
14AZ Pressure strut to cruciform reinforcement	E31		tighten in normal position	127 Nm
15AZ Connecting pipe to body	E31, E32, E34			127 Nm
16AZ Connecting pipe support to body	E31, E32, E34			59 Nm
17AZ Connecting pipe to trailing spring mount	E24 / from 5.82, E28			60 Nm
18AZ Leading strut to tie rod arm	E23			85 Nm
19AZ Tension strut on steering knuckle/swivel bearing	E39, E52, E67			80 Nm
	E60 / REAR END, E61 / REAR END, E63, E64, E65, E66			165 Nm
20AZ Tension strut to guide joint	E53, E83		Replace nut	80 Nm
	E60 / Four Wheel Drive, E61 / Four Wheel Drive		Replace nut	165 Nm
21 AZ Guide joint to swivel bearing	E53, E60 / Four Wheel Drive, E61 / Four Wheel Drive, E83		Replace screws	60 Nm

21 WHEEL BEARINGS AND STUB AXLE

31 21 WHEEL BEARINGS AND STEERING KNUCKLE

WHEEL BEARINGS AND STEERING KNUCKLE - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Collar nut (bearing unit)	E24 / from 5.82, E28, E30, E31, E32, E34, E36, E38, E46, E85, E86			290 Nm
	E67			420 Nm
2AZ Drive flange to axle shaft	E30 / Four Wheel Drive, E34 / Four Wheel Drive		Replace collar nut	250 Nm
	E46 / Four Wheel Drive, E53, E60 / Four Wheel Drive, E61 / Four Wheel Drive, E67, E83		Replace collar nut	420 Nm
3AZ Castle nut - adjustment specification	E12, E21, E23, E24 / from 5.82		Observe repair instruction.	
4AZ Steering knuckle to spring strut	E36	M12x20	Replace screws	107 Nm
	E36	Fitting screw M12x42		107 Nm
	E39	Screw with flange M12x1.5x95		81 Nm
	E38, E46, E85, E86	M12	Replace screw	81 Nm
5AZ Bearing unit on swivel bearing	E39, E52, E60 / REAR END, E61 / REAR END, E63, E64, E65, E66		Replace screws	110 Nm

31 SPRING STRUT

31 31 SPRING STRUTS

SPRING STRUTS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Spring strut support bearing / adapter for rough road package to wheel arch / adapter for rough road package	E60, E61, E63, E64, E65, E66, E67, E83, E85, E86	Flanged hexagon nut	Replace nuts	34 Nm
	E28, E30, E31, E32, E34, E36 / S50 / S52, E38, E39	Hexagon flange nut dia. 18 mm	Replace nuts	24 Nm
	E36 / S50 / S52	Flanged hexagon nut dia. 21 mm	Replace nuts and secure with Loctite 242	27 Nm

	E32, E34, E36, E46, E53	Flanged hexagon nut dia. 21 mm	Replace nuts	34 Nm
	E52	Hexagon flange nut dia. 18 mm	Replace nuts	28 Nm
2AZ Shock absorber piston rod on thrust bearing	E12, E21, E23, E24 / until 5.82			80 Nm
	E24 / from 5.82, E30, E31, E32, E34	M12 (with external hexagon piston rod)		64 Nm
	E24 / from 5.82, E30, E31, E32, E34	M12 (with internal hexagon piston rod)		44 Nm
	E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86		Replace nut	64 Nm
3AZ Spring strut shock absorber to pivot mount	E34 / Four Wheel Drive			80 Nm
	E53		Replace screw & nut	250 Nm
	E52, E60 / except AWD, E61 / except AWD, E63, E64, E65, E66		Replace screw & nut	81 Nm
	E60 / Four Wheel Drive, E61 / Four Wheel Drive, E67, E83		Replace screw & nut	100 Nm

35 STABILIZER BAR

31 35 STABILIZER BAR

STABILIZER BAR - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Retaining bar for stabilizer to front axle carrier / body	E21			50 Nm
	E12, E24 / until 5.82			45 Nm
	E36, E46, E39, E52, E85, E86	M8	tighten in normal position	21 Nm

	E60 / except AWD, E65, E66, E67		Replace nuts	28 Nm
	E60 / Four Wheel Drive, E61, E63, E64		Replace nuts	30.5 Nm
	E83	M10 10.9		56 Nm
2AZ Stabilizer to control arm	E21		tighten in normal position	130 Nm
3AZ Stabilizer link to control arm and stabilizer	E23	M8	tighten in normal position	25 Nm
	E23	M10	tighten in normal position	50 Nm
4AZ Stabilizer link to control arm	E34 / Four Wheel Drive			22 Nm
5AZ Stabilizer link to stabilizer	E34 / Four Wheel Drive			78 Nm
	E38, E46, E83			65 Nm
	E85, E86	M10		58 Nm
6AZ Stabilizer link on spring strut shock absorber and stabilizer	E28	(yellow chrome-plated)		30 Nm
	E24 / from 5.82, E28 / from 5.82	(white chrome-plated)		33 Nm
	E24 / from 5.82, E28, E31, E32, E34	(yellow)	(wrench surface on ball head must be parallel to absorber axle)	59 Nm
7AZ Stabilizer link on spring strut shock absorber and stabilizer (wrench surface on ball head must be parallel to absorber axle)	E36			59 Nm
	E30 / Four Wheel Drive			47 Nm
	E52			65 Nm
	E53			100 Nm
8AZ Stabilizer link (with bracket) on stabilizer	E30 / Four Wheel Drive			47 Nm
9AZ Bracket for stabilizer link on control arm	E30, E36			42 Nm
10AZ Bracket for stabilizer link on swivel bearing	E39, E60, E61, E63, E64			59 Nm

11AZ Stabilizer link on stabilizer/bracket	E39, E60, E61, E63, E64		Replace nut	65 Nm
	E65, E66, E67			
12AZ Stabilizer link to stabilizer			Replace nut	58 Nm

50 FRONT AXLE GEARBOX

31 50 FRONT AXLE DIFFERENTIAL

FRONT AXLE DIFFERENTIAL - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Front axle final drive to engine oil pan	E30 / E34			42 Nm
2AZ Oil filler plug	E30			53 Nm
	E34			70 Nm
3AZ Oil drain plug	E30			20 Nm
	E34			70 Nm
4AZ Pinion/ring gear to front axle final drive	E30			22 Nm
5AZ Bearing cap to front axle final drive	E30			22 Nm
6AZ Front axle final drive case bolts	E34			74 ± 4 Nm
7AZ Front axle final drive to engine oil pan	E46 / E53			55 Nm
	E60 / E61			65 Nm
	E83	M10 10.9 (with ribbed shim)		65 Nm
	E83	M10 10.9		55 Nm
8AZ Oil filler/drain plug	E46 / E53 / E60 / E61 / E83			60 Nm

60 OUTPUT SHAFT

31 60 OUTPUT SHAFT

OUTPUT SHAFT - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Output shaft console to engine oil sump	E30, E34			22 Nm
	E46, E53, E83			26,5 Nm

	E60, E61			21,4 Nm
2AZ Bearing block support to bearing block	E83 / N46			20,5 Nm
3AZ Heat shield to bearing block	E83 / N46			4,6 Nm

SUSPENSION

Front Suspension - Repair Instructions - X3

00 GENERAL

00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Pour oil only into appropriately marked containers
- Do not pour oil into drinking vessels (drinks bottles, glasses, cups or mugs)
- Observe country-specific safety regulations

First aid measures:

- Do not induce vomiting.

If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

If the person affected is unconscious, do not administer anything by mouth, place the person in the recovery position and seek immediate medical attention.

00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear protective goggles
- Wear oil-resistant protective gloves
- Observe country-specific safety regulations

First aid measures:

- Eye contact: Rinse eyes immediately with plenty of water for at least 15 minutes; if available, use an eye-rinsing bottle. If irritation of the eyes persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

NOTE: Do not use solvents/thinners.

00 SAFETY INSTRUCTIONS FOR HANDLING OIL

WARNING: Danger of poisoning if oil is ingested/absorbed through the skin! See 00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN .

Risk of injury if oil comes into contact with eyes and skin! See 00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN .

Recycling:

Observe country-specific waste-disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

NOTE: Do not flush oil away with water or aqueous cleaning agents.

00 RAISING VEHICLE WITH TROLLEY JACK

IMPORTANT: Observe the following trolley-jack-related instructions:

1. Use only BMW-distributed/approved trolley jacks which have rubber plate contact points.
2. Trolley jacks must be regularly serviced and always checked for functional reliability before they are used!
3. Check the rubber plate on the trolley jack prior to each use, replacing if necessary.

Fig. 1: BMW Trolley Jacks

Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: The vehicle may be raised with a trolley jack only at the following jacking points!

- 1 Car jacking point
- 2 Side car jacking points
- 3 Rear differential

Fig. 2: Car Jacking Points And Rear Differential

Courtesy of BMW OF NORTH AMERICA, INC.

Risk of damage: It is not permitted to raise the vehicle at the rear differential cover!

31 00 ... FRONT AXLE + STEERING: WHEEL/CHASSIS ALIGNMENT CHECK MUST BE CARRIED OUT AFTER THE FOLLOWING WORK

Fig. 5: Front Axle Carrier, Steering Gear, Gaiter, Swivel Bearing And Tie Rod
 Courtesy of BMW OF NORTH AMERICA, INC.

A wheel/chassis alignment check, see **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION** , must be carried out after the following work:

- Release of following screw/bolt connections:
 - Steering gear to front axle carrier
 - Control arm to front axle carrier
 - Support bearing to body (if centering pin is missing)
 - Tie rod end to tie rod
- Replacement of following parts:
 1. Front axle carrier
 2. Steering gear
 3. Gaiter (if the tie rod end has to be screwed off)
 4. Control arm / rubber mount
 5. Support bearing (if centering pin is missing)
 6. Swivel bearing
 7. Tie rod end
 8. Tie rod

31 00 ... INFORMATION ON REPLACING SHOCK ABSORBERS

Facts:

When a shock absorber is faulty on one side (leaking, noises, limit values exceeded on the shock tester), often both shock absorbers on the axle in question are replaced.

Consequence:

This is not necessary for technical reasons and causes the manufacturer not to recognize the unnecessarily removed shock absorbers as damaged parts. Unnecessarily high costs for the customer can be avoided by replacing the shock absorber on one side only.

Procedure:

Shock absorbers may be replaced on one side only until they have completed 50 000 km service.

Exception: On all M-GmbH models, when a limit value is exceeded on one side, it is still necessary always to replace both shock absorbers on the relevant axle.

31 00 ... NOTES ON REPAIRING THREADS

IMPORTANT: Install Helicoil thread inserts so that they are flush with the original thread.

NOTE: Damaged threads in engine carrier may be repaired with Helicoil thread inserts. Comply with the procedure described in the example.

Fig. 6: Helicoil Thread Insert
Courtesy of BMW OF NORTH AMERICA, INC.

Procedure:

1. Create a clean core hole; if necessary, drill out screw remnants

Fig. 7: Creating Clean Core Hole
Courtesy of BMW OF NORTH AMERICA, INC.

2. Create locating thread for Helicoil thread insert

Fig. 8: Creating Locating Thread For Helicoil Thread Insert
Courtesy of BMW OF NORTH AMERICA, INC.

3. Pick out Helicoil thread insert in accordance with the table: **41 00 ... NOTES ON REPAIRING THREADS** and screw into the locating thread until flush with the original thread

Fig. 9: Screwing Helicoil Thread Insert Into Locating Thread
Courtesy of BMW OF NORTH AMERICA, INC.

4. Break drive pin and remove

Fig. 10: Removing Drive Pin
Courtesy of BMW OF NORTH AMERICA, INC.

10 FRONT AXLE SUSPENSION

31 10 010 REMOVING AND INSTALLING/REPLACING REINFORCEMENT PLATE

**IMPORTANT: Observe safety instructions for raising the vehicle, see 00 LIFTING VEHICLE WITH A LIFTING PLATFORM .
Driving without reinforcement plate is not permitted!**

If necessary, release screws (1).

Remove expander rivet (2).

If necessary, remove rear assembly underside protection or shield on reinforcement plate, see **51 47 491 Removing and installing/replacing rear underbody protection.**

Release screws (3).

Remove reinforcement plate.

Installation:

Replace screws.

Tightening torque: 31 10 9AZ, see **31 10 FRONT AXLE SUSPENSION** .

Fig. 11: Expander Rivet And Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

If necessary, modify absorber, cover, cover with absorber and air routing duct.

51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION

NOTE: Illustration created using 3.0d as an example. There may be differences in detail in the case of other models.

Release expansion rivet (1).

Unfasten screws (2).

Pull out underbody protection (3) towards rear.

Fig. 12: Underbody Protection, Expansion Rivet And Screws
 Courtesy of BMW OF NORTH AMERICA, INC.

51 47 491 REMOVING AND INSTALLING/REPLACING REAR UNDERBODY PROTECTION

NOTE: Illustration created using 3.0d as an example. There may be differences in detail in the case of other models.

Unfasten screws (1) and nuts (2).

Feed out assembly underside protection (3) towards rear and remove.

Installation:

Ensure correct seating.

Centre assembly underside protection (3) and tighten down with screws (1) and nuts (2).

Fig. 13: Removing Rear Underside Protection
 Courtesy of BMW OF NORTH AMERICA, INC.

11 FRONT SUB-FRAME

31 11 001 REPLACING FRONT AXLE CARRIER (6-CYLINDER)

Special tools required:

- **00 2 040 BASIC TAKE-UP FIXTURE**
- 31 4 051
- 31 4 052
- 33 3 274

WARNING: Danger to life!

Secure engine in installation position to prevent it from falling down, see 11 00 670 SECURING ENGINE IN INSTALLATION POSITION (N52) .

Necessary preliminary tasks:

- Disconnect battery negative lead, see **THE BATTERY** .
- Secure engine in installation position, see **11 00 670 SECURING ENGINE IN INSTALLATION POSITION (N52)** .
- Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- Remove underbody protective plate, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .
- Remove reinforcement plate, see **31 10 010 Removing and installing/replacing reinforcement plate.**
- If necessary, remove steering gear cover on both sides
- Partially detach front wheel arch trim on both sides in rear area, see **51 71 040 REMOVING AND INSTALLING/REPLACING FRONT LEFT OR RIGHT WHEEL ARCH COVER**
- If necessary, disconnect plug connection from EH converter and remove line from front axle carrier
- If necessary, disconnect plug connection from ride-height sensor and remove line from front axle carrier
- If necessary, disconnect vacuum line for electrically operated valve at T-piece
- Remove tension strut on both sides from front axle carrier, see **31 12 050 Removing and installing/replacing left or right tension strut.**
- Remove control arm on both sides from front axle carrier, see **31 12 000 Removing and installing/replacing left or right control arm.**
- Disconnect pressure line for power steering from front axle carrier
- Remove power steering gear from front axle carrier and tie up, see **32 13 060 REMOVING AND INSTALLING/REPLACING POWER STEERING GEAR** .

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered

- the vehicle does not lift off the locating plates on the lifting platform

If necessary, position special tool 00 2 040 with a 2nd person helping on workshop jack.

Insert special tools 31 4 051 and 31 4 052 into corresponding mountings of special tool 00 2 040 .

Align special tool 00 2 040 to front axle subframe.

If necessary, lower special tool 33 3 274 .

Support front axle subframe by raising special tool 00 2 040.

Fig. 14: Special Tools (31 4 052) And (31 4 051)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Pay attention to power steering hoses and lines when lowering and raising. Hoses/lines must not be kinked/tensioned/bent!

Release screws (1).

Tightening torque: 31 10 2AZ, see **31 10 FRONT AXLE SUSPENSION** .

Release screws (2, 3).

Tightening torque: 31 10 3AZ, see **31 10 FRONT AXLE SUSPENSION** .

If necessary, disconnect pressure line for power steering from front axle carrier.

Lower front axle carrier.

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see **31 00 ... Notes on repairing threads**.

Replace all bolts.

Tighten down bolts (1) and then bolts (2, 3).

Fig. 15: Front Axle Carrier Bolts

Courtesy of BMW OF NORTH AMERICA, INC.

Remove stabilizer from front axle carrier and tie up, see **31 35 000 Removing and installing/replacing front stabilizer.**

Continue lowering front axle carrier, remove and set down on a suitable surface.

Remove engine mounts on both sides and if necessary remove with vacuum lines from front axle carrier, see **22 11 001 REPLACING RIGHT ENGINE MOUNT (N52K) .**

If necessary, remove stoneguard on both sides.

Installation:

Use previous front axle subframe as a template for modifying or replacing small parts.

Fig. 16: Front Axle Carrier

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform chassis alignment check, see **32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE** .
- Carry out steering angle sensor adjustment

31 11 506 LOWERING/RAISING FRONT AXLE CARRIER

Special tools required:

- **00 2 040 BASIC TAKE-UP FIXTURE**
- 31 4 051 , see **31 4 050 TAKE-UP SET**
- 31 4 052 , see **31 4 050 TAKE-UP SET**
- 33 3 274 , see **33 3 270 SET OF SUPPORTS**

WARNING: Danger to life!

Secure engine in installation position to prevent it from falling down, see **11 00 670 SECURING ENGINE IN INSTALLATION POSITION (N52)** .

Necessary preliminary tasks:

- Secure engine in installation position, see **11 00 670 SECURING ENGINE IN INSTALLATION POSITION (N52)** .
- If necessary, remove assembly underside protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .
- Remove reinforcement plate, see **31 10 010 Removing and installing/replacing reinforcement plate.**
- If necessary, remove steering gear cover on both sides
- Partially detach front wheel arch trim on both sides in rear area, see **51 71 040 REMOVING AND INSTALLING/REPLACING FRONT LEFT OR RIGHT WHEEL ARCH COVER**
- Remove double pivot of lower steering spindle from power steering gear, see **32 31 219 REMOVING AND INSTALLING/REPLACING DOUBLE JOINT WITH FLEXIBLE DISK** .
- If necessary, disconnect plug connection from EH converter and remove line from front axle carrier
- If necessary, disconnect plug connection from ride-height sensor and remove line from front axle carrier
- If necessary, disconnect vacuum line of electrically operated valve at T-piece

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

If necessary, position special tool 00 2 040 with a 2nd person helping on workshop jack.

Insert special tools 31 4 051 and 31 4 052 into corresponding mountings of special tool 00 2 040 .

Align special tool 00 2 040 to front axle subframe.

If necessary, lower special tool 33 3 274 .

Support front axle subframe by raising special tool 00 2 040 .

Fig. 17: Special Tools (31 4 052) And (31 4 051)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Pay attention to power steering hoses and lines when lowering and raising. Hoses/lines must not be kinked/tensioned/bent!

Release screws (1).

Tightening torque: 31 10 2AZ, see **31 10 FRONT AXLE SUSPENSION** .

Release screws (2, 3).

Tightening torque: 31 10 3AZ, see **31 10 FRONT AXLE SUSPENSION** .

If necessary, disconnect pressure line for power steering from front axle carrier.

Lower front axle carrier.

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see **31 00 ... Notes on repairing**

threads.

Replace all bolts.

Tighten down bolts (1) and then bolts (2, 3).

Fig. 18: Front Axle Carrier Bolts
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out steering angle sensor adjustment

12 STRUTS WITH RUBBER MOUNTS

31 12 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT CONTROL ARM

Special tools required:

- **31 2 240 PULLER**

NOTE: If the control arm is detached from the front axle carrier, it is necessary after reinstallation to carry out a wheel/chassis alignment check.

NOTE: **Checking control arm:**

Refer to **Measuring play of wheel control joints**, see **31 12 023 Measuring play of wheel control joints.**

Necessary preliminary tasks:

- Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- If necessary, remove jointed rod of ride-height sensor from control arm

Release nut and remove bolt towards front.

Only on right side: If necessary, remove holder with ride-height sensor.

Installation:

Replace self-locking nut.

Tightening torque: 31 12 2AZ, see **31 12 CONTROL ARMS AND STRUTS** .

Fig. 19: Locating Self-Locking Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Release nut by only 3 thread turns so that control arm is not flung away unchecked when forced off.

Press control arm off swivel bearing with special tool 31 2 240 .

Unscrew nut and remove control arm.

Installation:

Keep journal on ball head and bushing in swivel bearing clean and free from oil and grease.

Replace self-locking nut.

Tightening torque: 31 12 6AZ, see **31 12 CONTROL ARMS AND STRUTS** .

Fig. 20: Special Tool (31 2 240)

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform chassis alignment check, see **32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE** .
- Carry out steering angle sensor adjustment

31 12 003 REMOVING AND INSTALLING / REPLACING TOP RIGHT WISHBONE

NOTE: Control arms with + or - marking (see illustration) are camber correction arms:

- - Underdimension variant
- + Overdimension variant

These camber correction arms are used to correct the camber values by 30 minutes. To be used only if the tolerance values are exceeded or undershot! An unmarked control arm is a standard part.

Fig. 21: Identifying Control Arms

Courtesy of BMW OF NORTH AMERICA, INC.

Necessary preliminary tasks: Remove control unit box

Important! The spring strut/lower wishbone screw connection does not have to be released!

Further procedure is identical to: **Removing and installing/replacing top left control arm.**

31 12 023 MEASURING PLAY OF WHEEL CONTROL JOINTS

Special tools required:

- **31 1 060 TEST FIXTURE**

Test apparatus (31 1 060):

1. Slide (31 1 061)
2. Measuring electronics (31 1 062)
3. Magnetic retainer (31 1 063)
4. Evaluation electronics (31 1 064)
5. Magnetic retainer (31 1 065)
6. Hook wrench (31 1 066)
7. Measuring clip (31 1 067)

Fig. 22: Magnetic Retainer, Hook Wrench, Evaluation Electronics And Measuring Clip
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Carry out check using DIS Tester (Service functions). To substantiate that the check has been carried out properly, include the diagnosis report (paper printout) with the warranty application.

On vehicles with 17" or 18" rims, Remove front wheels if necessary, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .

IMPORTANT: Make sure magnetic retainer is correctly seated.

Position magnetic retainers (1) on housing cover of control arm (2).

Fig. 23: Magnetic Retainers And Housing Cover Of Control Arm
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Measuring clip must not contact the control arm.

Fit measuring clip (2) on threaded stem (3) of joint and screw down with locating screw (1).

Press button on evaluation electronics.

NOTE: The device performs a self-test.

Both LEDs flash, then the red LED lights up permanently.

Fig. 24: Measuring Clip, Threaded Stem And Locating Screw
Courtesy of BMW OF NORTH AMERICA, INC.

Move slide with measuring electronics upwards until green LED lights up.

NOTE: Gap (A) between measuring electronics and magnetic retainer must be approx. 5-7 mm.

Then secure slide with clamping screw (1).

Press evaluation electronics button for approx. 2 seconds until the green LED flashes.

NOTE: The device is now calibrated and ready for measuring.

Fig. 25: Gap Between Measuring Electronics And Magnetic Retainer
Courtesy of BMW OF NORTH AMERICA, INC.

1. Test:

Set torque wrench to 60 Nm.

Introduce a force with hook wrench (1) in the direction shown until torque is obtained.

Read off test result:

- Red LED flashes: Joint must be replaced
- Green LED flashes: Carry out 2nd test

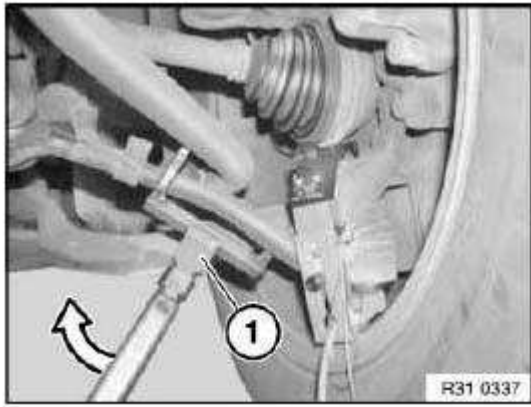

Fig. 26: Hook Wrench
Courtesy of BMW OF NORTH AMERICA, INC.

2. Test:

Reposition hook wrench.

Introduce a force with hook wrench (1) in the direction shown until torque is obtained.

Read off test result:

- Red LED flashes: Joint must be replaced
- Green LED flashes: Joint must not be replaced

Fig. 27: Hook Wrench
Courtesy of BMW OF NORTH AMERICA, INC.

31 12 024 REPLACE WHEEL CONTROL JOINT IN WISHBONE (ALL-WHEEL DRIVE VEHICLE)

Necessary preliminary tasks: Remove front wheel

Release screws (1). If necessary, push wheel control joint (2) off swivel bearing using a suitable tool.

Installation note: Recondition thread in swivel bearing. Keep recess for wheel control joint, bushing in trailing link and wheel control joint journal clean and free from grease. Replace microencapsulated screws. Tightening torque, see 31 12 21AZ in **31 12 CONTROL ARMS AND STRUTS** .

31 12 026 REMOVING AND INSTALLING/REPLACING GUIDE JOINT IN SWIVEL BEARING

Special tools required:

- **31 2 240 PULLER**
- **33 4 200 TOOL KIT / STRIKER FIXTURE**
- 33 4 205 , see **33 4 200 TOOL KIT / STRIKER FIXTURE**

Necessary preliminary tasks:

- Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .

Slacken nut (1), grip if necessary.

Release screws (2).

Remove tension strut with guide joint from swivel bearing.

Installation:

Recondition thread in swivel bearing.

Keep recess for guide joint, bore in tension strut and guide joint journal clean and free from grease.

Replace screws.

Tightening torque: 31 12 21AZ, see **31 12 CONTROL ARMS AND STRUTS** .

Replace self-locking nut.

Tightening torque: 31 12 20AZ, see **31 12 CONTROL ARMS AND STRUTS** .

Fig. 28: Guide Joint Screws And Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Guide joint tightly seated in swivel bearing:

IMPORTANT: The guide joint must be replaced once it has been driven out with the special tools.

Secure special tool 33 4 205 to guide joint.

Drive guide joint out of swivel bearing with special tool 33 4 200.

Fig. 29: Driving Guide Joint Out Of Swivel Bearing With Special Tool (33 4 200)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Screw on nut a few turns so that guide joint does not slip off unchecked when forced off.

Screw on nut a few turns.

Press guide joint with special tool 31 2 240 out of tension strut.

Unscrew nut and remove guide joint.

Fig. 30: Removing Guide Joint

Courtesy of BMW OF NORTH AMERICA, INC.

31 12 050 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT TENSION STRUT

IMPORTANT: With build date 12/2006 the tension strut to guide joint connection was increased by 10 mm. The upshot of this is that on vehicles up to 12/2006 the guide joint, see **31 12 026 Removing and installing/replacing guide joint in swivel bearing** must also be replaced.
Mixed fitting of tension struts is permitted!

Necessary preliminary tasks:

- Remove front assembly underside protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .
- If necessary, remove steering gear cover.
- Detach front wheel arch trim, see **51 71 040 REMOVING AND INSTALLING/REPLACING FRONT LEFT OR RIGHT WHEEL ARCH COVER**
- Remove guide joint, see **31 12 026 Removing and installing/replacing guide joint in swivel bearing**.

Release screw (1).

Release nut on rear side.

Swivel holder (2) for engine shielding at front towards center of vehicle and remove towards bottom.

Fig. 31: Holder And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten nut.

Remove screw towards front.

Remove tension strut.

Installation:

Replace self-locking nut.

Tighten bolt connection in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Tightening torque: 31 12 1AZ, see **31 12 CONTROL ARMS AND STRUTS** .

Fig. 32: Self-Locking Nut
Courtesy of BMW OF NORTH AMERICA, INC.

31 12 135 REPLACING RUBBER MOUNTS ON BOTH CONTROL ARMS

Special tools required:

See **31 FRONT AXLE** , **33 REAR AXLE**

- 31 1 051
- 31 1 054
- 33 3 051
- 33 3 052
- 33 3 054
- 33 3 310

Necessary preliminary tasks:

- Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- Check ball joint of control arm while installed, replace control arm if necessary, see **31 12 000 Removing and installing/replacing left or right control arm**.
- Remove control arm from front axle carrier and tie up, see **31 12 000 Removing and installing/replacing left or right control arm**.

After installation:

- Perform chassis alignment check, see **32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE** .
- Carry out steering angle sensor adjustment

IMPORTANT: Tie control arm back with wire; this prevents ball joint from being damaged.

Withdraw rubber mount with special tools 31 1 051 , 31 1 054 , 33 3 051 , 33 3 052 , 33 3 054 and 33 3 310 .

Installation:

Keep rubber mount and bore in control arm clean and free from grease.

Draw in rubber mount from chamfered side of control arm bore.

Fig. 33: Special Tools (33 3 051), (33 3 052) And (33 3 054)
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Protrusion (A) = 5.75 ± 0.7 mm.

Fig. 34: Rubber Mount Protrusion
 Courtesy of BMW OF NORTH AMERICA, INC.

31 12 138 REPLACING RUBBER MOUNTS ON BOTH TENSION STRUTS

Special tools required:

See **31 2 260 PRESSURE SLEEVE TOOL**

- 31 2 261
- 31 2 264

IMPORTANT: The rubber mounts on both tension struts must be replaced! Note that the rubber mounts may only be changed once.

Carry out check:

There must always be a minimum amount of play in the guide joint.

1. Check guide joint play

NOTE: For this purpose, apply light pressure to the tension strut (in the area of the guide joint) in the horizontal and vertical directions.

- Play is OK: Check bolt connection (see Point 2)
 - Play is not OK: Replace rubber mount and guide joint, see **31 12 026 Removing and installing/replacing guide joint in swivel bearing.**
2. Check bolt connection (tension strut to guide joint) by tightening to 60 % of Tightening torque: 31 12 20AZ, see **31 12 CONTROL ARMS AND STRUTS** and listening for cracking sound
- Torque wrench cracking sound: Replace rubber mount
 - Bolt connection turns: Replace tension strut and guide joint, see **31 12 CONTROL ARMS AND STRUTS** .

Fig. 35: Guide Joint

Courtesy of BMW OF NORTH AMERICA, INC.

Replacing rubber mount:

Remove both tension struts, see **31 12 050 Removing and installing/replacing left or right tension strut.**

Using a press and special tools 31 2 261 and 31 2 264 , press rubber mount out of tension strut.

NOTE: Special tool 31 2 264 must be exactly flush with rubber mount bushing.

Fig. 36: Removing Rubber Mount From Tension Strut
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Keep rubber mount and bushing in tension strut clean and free from grease.

Align rubber mounts to each other using markings (K) and press in. The deviation must not exceed $\pm 3^\circ$.

Fig. 37: Rubber Mounts Alignment Mark
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Protrusion (A) = 12.5 ± 0.7 mm

Fig. 38: Rubber Mount Protrusion

Courtesy of BMW OF NORTH AMERICA, INC.

31 12 640 REPLACING RUBBER MOUNTS IN BOTH CONTROL ARMS (CONTROL ARMS REMOVED)

Special tools required:

See **31 FRONT AXLE** , **33 REAR AXLE**

- 31 1 051
- 31 1 054
- 33 3 054

Press out rubber mount with special tools 31 1 051 , 31 1 054 and 33 3 054 .

Installation:

Keep rubber mount and bore in control arm clean and free from grease.

Press in rubber mount from chamfered side of control arm bore.

Fig. 39: Pressing Rubber Mount Into Control Arm Bore

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Protrusion (A) = 5.75 ± 0.7 mm.

Fig. 40: Rubber Mount Protrusion

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform chassis alignment check, see **32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE** .
- Carry out steering angle sensor adjustment

21 WHEEL BEARINGS AND STUB AXLE

31 21 090 REPLACING (REMOVING AND INSTALLING) LEFT OR RIGHT SWIVEL BEARING

Special tools required:

- 31 2 230

Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .

Release collar nut; to do so, press brake pedal to floor.

Installation:

Replace collar nut, apply a light coating of oil to contact surface and tighten down.

Tightening torque: 31 21 2AZ, see **31 21 WHEEL BEARINGS AND STEERING KNUCKLE** .

Secure collar nut by peening on flat areas of output shaft.

Fig. 41: Locating Collar Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Remove brake disc, see **34 11 220 REMOVING AND INSTALLING/REPLACING BOTH FRONT BRAKE DISCS** .

Replacement only: Drive out drive flange, see **31 21 180 Replacing bearing for front wheel.**

Remove front pulse generator from swivel bearing, see **34 52 525 REPLACING ONE FRONT PULSE GENERATOR** .

Remove tie rod end from swivel bearing, see **32 21 151 REPLACING LEFT OR RIGHT TIE ROD** .

Remove guide joint from swivel bearing, see **31 12 026 Removing and installing/replacing guide joint in swivel bearing.**

Remove control arm from swivel bearing, see **31 12 000 Removing and installing/replacing left or right control arm.**

Remove stabilizer link from spring strut, see **31 35 005 Removing and installing/replacing push rod (stabilizer link) for left/right stabilizer.**

Turn swivel bearing to one side.

Replacement only: Drive out drive flange, see **31 21 180 Replacing bearing for front wheel.**

Support swivel bearing (1) with workshop jack and a suitable mounting.

Release nut and remove bolt (2) towards front.

Expand swivel bearing (1) with special tool 31 2 230.

Lower workshop jack.

Remove swivel bearing (1).

Installation:

Replace self-locking nut.

Tightening torque: 31 31 3AZ, see **31 31 SPRING STRUTS** .

Fig. 42: Special Tool (31 2 230), Swivel Bearing And Bolt
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Keep press fit of swivel gearing and spring strut in lower area clean and free from oil and grease.

Spread swivel bearing (1) with special tool 31 2 230 , align by means of gap to positioning pins (2) on back of spring strut and raise as far as it will go.

Fig. 43: Special Tool (31 2 230) And Swivel Bearing
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

Modify dust sleeve (1).

Modify brake guard plate (2).

Installation:

Install new wheel bearing, see **31 21 180 Replacing bearing for front wheel.**

Replacement only: Draw in drive flange, see **31 21 180 Replacing bearing for front wheel.**

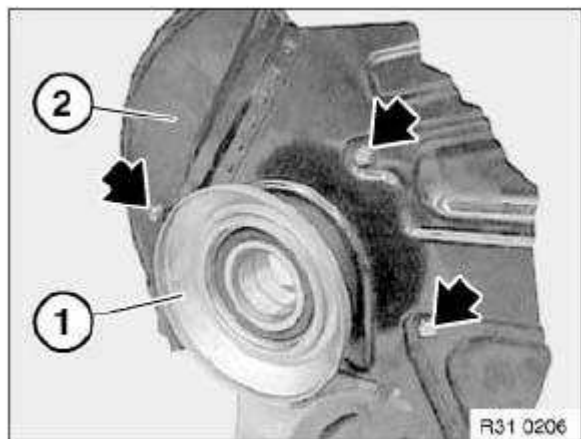

Fig. 44: Dust Sleeve And Brake Guard Plate
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform chassis alignment check, see **32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE** .

31 21 180 REPLACING BEARING FOR FRONT WHEEL

Special tools required:

See **22 ENGINE AND GEARBOX SUSPENSION** , **31 FRONT AXLE** , **REAR AXLE - SPECIAL TOOLS** .

- 22 1 018
- 31 2 113
- 33 1 367
- 33 2 116
- 33 2 160
- 33 2 201
- 33 3 261

- 33 3 266
- 33 3 268
- 33 4 036
- 33 4 200
- 33 4 261

**IMPORTANT: Bearing cannot be dismantled.
Do not wash out bearing.**

Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .

Release collar nut; to do so, press brake pedal to floor.

Remove brake disc, see **34 11 220 REMOVING AND INSTALLING/REPLACING BOTH FRONT BRAKE DISCS** .

Fig. 45: Locating Collar Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Force drive flange with special tools 33 2 116 / 33 2 201 , 33 2 160 , 33 4 200 and 5 wheel studs out of wheel bearing.

NOTE: Rounded inside edge of special tool 33 2 160 must point to drive flange.

Detach wheel bearing inner race from drive flange.

Fig. 46: Special Tool (33 2 160) And (33 4 200)
 Courtesy of BMW OF NORTH AMERICA, INC.

Remove swivel bearing, see **31 21 090 Replacing (removing and installing) left or right swivel bearing** and clamp with aluminium clamping jaws in vice.

IMPORTANT: The bearing is destroyed when the drive flange is removed and must not be reused!

Lift out retaining ring (1).

Fig. 47: Removing Retaining Ring
 Courtesy of BMW OF NORTH AMERICA, INC.

Pull out bearing with special tools 31 2 113 , 33 4 261 , 33 4 036 and 33 3 261.

NOTE: The bearing can be forced out of the swivel bearing on a press.

Check dust sleeve, replace if necessary.

Fig. 48: Pulling Out Bearing With Special Tools
 Courtesy of BMW OF NORTH AMERICA, INC.

**IMPORTANT: Keep press-fit areas clean and free of oil and grease.
 Wider chamfer of bearing must point to swivel bearing!**

Clean press-fit area of new bearing.

Clean bearing seat in swivel bearing.

IMPORTANT: Wider chamfer (1) of bearing must point to swivel bearing!

Fig. 49: Bearing Wider Chamfer
 Courtesy of BMW OF NORTH AMERICA, INC.

Align bearing by way of wider chamfer to swivel bearing and draw in with special tools 31 2 113 , 22 1 018 , 33 1 367 and 33 3 261.

NOTE: The bearing can be forced out of the swivel bearing on a press.

Fig. 50: Special Tools (33 3 261), (33 1 367) And (31 2 113)
Courtesy of BMW OF NORTH AMERICA, INC.

Install new circlip (1).

NOTE: Make sure circlip (1) is correctly seated.

Fig. 51: Removing Retaining Ring
Courtesy of BMW OF NORTH AMERICA, INC.

Draw in drive flange (1) with special tools 31 2 113 , 33 3 268 , 33 3 266 and 33 3 261.

Fig. 52: Drive Flange With Special Tools (33 3 261), (33 3 266) And (31 2 113)
Courtesy of BMW OF NORTH AMERICA, INC.

Install swivel bearing, see **31 21 090 Replacing (removing and installing) left or right swivel bearing.**

Draw output shaft into drive flange, see **31 60 ... Pressing output shaft out of drive flange (wheel hub) and drawing in.**

Remove brake disc, see **34 11 220 REMOVING AND INSTALLING/REPLACING BOTH FRONT BRAKE DISCS .**

Install front brake calliper, see **34 11 519 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT FRONT BRAKE CALIPER .**

Replace collar nut, apply a light coating of oil to contact surface and tighten down.

Tightening torque: 31 21 2AZ, see **31 21 WHEEL BEARINGS AND STEERING KNUCKLE .**

Secure collar nut by peening on flat areas of output shaft.

Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL .**

Fig. 53: Locating Collar Nut

Courtesy of BMW OF NORTH AMERICA, INC.

31 SPRING STRUT

31 31 000 REMOVING AND INSTALLING COMPLETE LEFT OR RIGHT SPRING STRUT SHOCK ABSORBER

Special tools required:

- **31 2 230 SOCKET**

IMPORTANT: If the centering pin is missing from the support bearing, the position of the studs to the wheel arch must be marked so that the original camber is approximately maintained.

Only one nut may ever be released for marking.

Necessary preliminary tasks:

- Remove brake caliper, see **34 11 519 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT FRONT BRAKE CALIPER** and tie back
- Remove stabilizer link from spring strut, see **31 35 005 Removing and installing/replacing push rod (stabilizer link) for left/right stabilizer**.
- Remove tie rod end from swivel bearing, see **32 21 151 REPLACING LEFT OR RIGHT TIE ROD** .

IMPORTANT: Risk of damage!

When the swivel bearing is removed from the spring strut, the tripod (2) can be pulled out of the tulip (1) and fall into the rubber gaiter (3). In this event, it will be necessary to install a new output shaft because the tripod (2) can jam or a roller of the tripod (2) can slip off the molding. The roller would then be located in the gaiter (3) or bellows and result in rapid failure.

Fig. 54: Tripod, Tulip And Gaiter
Courtesy of BMW OF NORTH AMERICA, INC.

Remove line for pulse generator from spring strut.

If necessary, remove line for brake pad wear sensor from spring strut.

Support swivel bearing (1) with workshop jack and a suitable mounting.

Release nut and remove bolt (2) towards front.

Expand swivel bearing (1) with special tool 31 2 230.

Lower workshop jack.

Remove swivel bearing (1) and tie up.

Installation:

Replace self-locking nut.

Tightening torque: 31 31 3AZ, see **31 31 SPRING STRUTS** .

Fig. 55: Special Tool (31 2 230), Swivel Bearing And Bolt
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Keep press fit of swivel gearing and spring strut in lower area clean and free from oil and grease.

Spread swivel bearing (1) with special tool 31 2 230 , align by means of gap to positioning pins (2) on back of spring strut and raise as far as it will go.

Fig. 56: Special Tool (31 2 230) And Swivel Bearing
Courtesy of BMW OF NORTH AMERICA, INC.

Centering pin missing: Make position of studs in relation to wheel arch.

Secure spring strut against falling out.

Unscrew nuts.

Remove spring strut downwards out of wheel arch.

Installation:

Align spring strut using centering pin (1) to bore (2) in wheel arch or studs to wheel arch and push upwards.

Replace self-locking nuts.

Tightening torque: 31 31 1AZ, see **31 31 SPRING STRUTS** .

Fig. 57: Centering Pin Into Bore

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out wheel alignment check, see **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION** if a spring strut with support bearing was or has been installed without centering pin.

31 31 031 REPLACING FRONT LEFT OR RIGHT SPRING STRUT SHOCK ABSORBER

Special tools required:

See **31 FRONT AXLE**

- 31 2 210
- 31 3 210
- 31 3 341
- 31 3 382
- 31 3 383

WARNING: Observe the following instructions to avoid any risk of injury by the coil springs.

1. Prior to each use, check the special tools for defects, modifications and operational reliability.
2. Damaged/modified special tools must not be used!
3. No changes or modifications may be made to the special tools!

4. These special tools are intended solely for the purpose of tightening and relieving cylindrical and tapered suspension springs.
5. Keep special tools dry, clean and free of grease.
6. Impact screwdrivers may not be used!
7. Do not compress coil spring to full extent.
8. Observe manufacturer's instructions.

NOTE: **Read and comply with Information on replacing shock absorbers, see 31 00 ... Information on replacing shock absorbers.**

Necessary preliminary tasks:

- Remove front spring strut, see 31 31 000 Removing and installing complete left or right spring strut shock absorber.

Removing:

Clamp special tool 31 3 341 in vice.

Fit special tools 31 3 382 and 31 3 383 from above on special tool 31 3 341 until locking pins (1) can be felt and heard to snap into place.

Check seating of special tools 31 3 382 and 31 3 383 , correct if necessary.

Fig. 58: Locking Pins And Special Tool (31 3 341), (31 3 382) And (31 3 383)
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Coils of coil spring must be located completely in recess of special tools 31 3 382 and 31 3 383 when tensioned!

Compress coil spring until stress on piston rod is relieved.

Clean coil spring to remove coarse contamination and take up with special tools 31 3 382 and 31 3 383 .

Turn spring strut until special tool 31 3 382 rests in indentation (1) of spring strut.

NOTE: In this way, the coil spring rests to optimum effect on special tools 31 3 382 and 31 3 383.

Compress coil spring until stress on piston rod is relieved.

Fig. 59: Special Tools (31 3 382) And (31 3 383)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove cap.

Release nut with special tool 31 3 210 , grip piston rod if necessary.

Fig. 60: Special Tool (31 3 210)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove support bearing (1), dust sleeve and shim (2).

Remove spring plate (3) with spring pad (4).

Remove spring strut with auxiliary damper, gaiter and lower spring pad sideways from tensioned coil spring.

Fig. 61: Spring Plate, Support Bearing And Dust Sleeve And Shim
 Courtesy of BMW OF NORTH AMERICA, INC.

Remove auxiliary damper (1), gaiter (2) and lower spring pad (3).

Assembly:

Check auxiliary damper (1), gaiter (2) and lower spring pad (3) for damage, replace if necessary.

Attach lower spring pad (3) to spring plate.

Attach auxiliary damper (1) and gaiter (2) to piston rod.

Fig. 62: Lower Spring Pad, Auxiliary Damper And Gaiter
 Courtesy of BMW OF NORTH AMERICA, INC.

Insert spring strut in tensioned coil spring and align to end of coil spring using lower spring pad.

Check support bearing (1) and upper spring pad (4) for damage, replace if necessary.

Attach upper spring plate (3) with upper spring pad (4) and shim (2) to piston rod.

Attach support bearing (1) with dust sleeve to piston rod.

Fig. 63: Spring Plate, Support Bearing And Dust Sleeve And Shim
 Courtesy of BMW OF NORTH AMERICA, INC.

Replace self-locking nut and screw on as far as possible to avoid damaging the piston rod when relieving tension on the coil spring.

Relieve tension on coil spring slightly.

NOTE: **Make sure that lower and upper coils of coil spring rest completely in recess of spring plate.**

Tighten down nut with special tool 31 2 210 (grip piston rod in the process).

Tightening torque: 31 31 2AZ, see **31 31 SPRING STRUTS** .

Fully relieve tension on coil spring.

Fig. 64: Special Tool (31 3 210)
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out wheel alignment check, see **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK**

WITH LOAD UP TO DESIGN POSITION if a spring strut with support bearing was or has been installed without centering pin.

51 71 373 REMOVING AND INSTALLING/REPLACING TENSION STRUT ON SPRING STRUT DOME

**IMPORTANT: Vehicles must not be driven without tension struts.
Driving without tension struts may damage the vehicle body.**

Release screws (1) and remove tension strut (2).

Tightening torque: 51 71 4AZ, see **51 71 SEALS AND LOOSE BODY PARTS** .

Fig. 65: Tension Strut And Screws
Courtesy of BMW OF NORTH AMERICA, INC.

33 SPRING WITH SUSPENSION

31 33 001 REPLACING FRONT LEFT OR RIGHT SPRING STRUT SUPPORT BEARING

Special tools required:

See **31 FRONT AXLE**

- 31 2 210
- 31 3 210
- 31 3 341
- 31 3 382
- 31 3 383

WARNING: Observe the following instructions to avoid any risk of injury by the coil springs.

1. Prior to each use, check the special tools for defects, modifications and operational reliability.
2. Damaged/modified special tools must not be used!
3. No changes or modifications may be made to the special tools!
4. These special tools are intended solely for the purpose of tightening and relieving cylindrical and tapered suspension springs.
5. Keep special tools dry, clean and free of grease.
6. Impact screwdrivers may not be used!
7. Do not compress coil spring to full extent.
8. Observe manufacturer's instructions.

Necessary preliminary tasks:

- Remove front spring strut, see **31 31 000 Removing and installing complete left or right spring strut shock absorber.**

Removing:

Clamp special tool 31 3 341 in vice.

Fit special tools 31 3 382 and 31 3 383 from above on special tool 31 3 341 until locking pins (1) can be felt and heard to snap into place.

Check seating of special tools 31 3 382 and 31 3 383 , correct if necessary.

Fig. 66: Locking Pins And Special Tool (31 3 341), (31 3 382) And (31 3 383)
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Coils of coil spring must be located completely in recess of special tools 31 3 382 and 31 3 383 when tensioned!

Compress coil spring until stress on piston rod is relieved.

Clean coil spring to remove coarse contamination and take up with special tools 31 3 382 and 31 3 383 .

Turn spring strut until special tool 31 3 382 rests in indentation (1) of spring strut.

NOTE: In this way, the coil spring rests to optimum effect on special tools 31 3 382 and 31 3 383 .

Compress coil spring until stress on piston rod is relieved.

Fig. 67: Special Tools (31 3 382) And (31 3 383)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove cap.

Release nut with special tool 31 3 210 , grip piston rod if necessary.

Remove support bearing and dust sleeve.

Fig. 68: Special Tool (31 3 210)
Courtesy of BMW OF NORTH AMERICA, INC.

Version with rough road package:

Unscrew nuts.

Remove adapter (A) from support bearing.

Installation:

Align adapter (A) using centering pin (1) to support bearing and place in position.

Replace self-locking nuts.

Tightening torque: 31 31 1AZ, see 31 31 SPRING STRUTS .

Drive in centering pin (1) of adapter (A).

NOTE: If an adapter (A) without a centering pin was fitted, centering pin (1) of new adapter (A) must be driven in.

Fig. 69: Adapter And Centering Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Version with rough road package:

If necessary, drive out centering pin (1).

NOTE: If a support bearing (2) was fitted without centering pin (1), the centering pin (1) of the new support bearing (2) must be driven out.

Fig. 70: Support Bearing And Centering Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Replace self-locking nut and screw on as far as possible to avoid damaging the piston rod when relieving tension on the coil spring.

Relieve tension on coil spring slightly.

NOTE: Make sure that lower and upper coils of coil spring rest completely in recess of spring plate.

Tighten down nut with special tool 31 2 210 (grip piston rod in the process).

Tightening torque: 31 31 2AZ, see **31 31 SPRING STRUTS** .

Fully relieve tension on coil spring.

Fig. 71: Special Tool (31 3 210)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out wheel alignment check, see **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION** if a spring strut with support bearing was or has been installed without centering pin.

31 33 095 MEASURING RIDE-LEVEL HEIGHT OF VEHICLE

Necessary preliminary tasks:

- Tighten bolt connection in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Determine actual ride height (A) - to do so, attach tape measure to rim flange (2) at bottom middle and measure to lower edge of wheel arch (1).

Fig. 72: Actual Ride Height

Courtesy of BMW OF NORTH AMERICA, INC.

31 33 100 REMOVING AND INSTALLING/REPLACING COIL SPRING FOR LEFT OR RIGHT FRONT SPRING STRUT

Special tools required:

See **31 FRONT AXLE**

- 31 2 210
- 31 3 210
- 31 3 341
- 31 3 382
- 31 3 383

WARNING: Observe the following instructions to avoid any risk of injury by the coil springs.

1. Prior to each use, check the special tools for defects, modifications and operational reliability.
2. Damaged/modified special tools must not be used!
3. No changes or modifications may be made to the special tools!
4. These special tools are intended solely for the purpose of tightening and relieving cylindrical and tapered suspension springs.
5. Keep special tools dry, clean and free of grease.
6. Impact screwdrivers may not be used!
7. Do not compress coil spring to full extent.
8. Observe manufacturer's instructions.

IMPORTANT: Both coil springs on the relevant axle must be replaced only in the event of corrosion breakage!

NOTE: The coil spring is assigned after the vehicle identification number has been entered and the optional extras of the relevant vehicle selected.

Necessary preliminary tasks:

- Remove front spring strut, see **31 31 000 Removing and installing complete left or right spring strut shock absorber.**

Removing:

Clamp special tool 31 3 341 in vice.

Fit special tools 31 3 382 and 31 3 383 from above on special tool 31 3 341 until locking pins (1) can be felt and heard to snap into place.

Check seating of special tools 31 3 382 and 31 3 383 , correct if necessary.

Fig. 73: Locking Pins And Special Tool (31 3 341), (31 3 382) And (31 3 383)
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Coils of coil spring must be located completely in recess of special tools 31 3 382 and 31 3 383 when tensioned!

Compress coil spring until stress on piston rod is relieved.

Clean coil spring to remove coarse contamination and take up with special tools 31 3 382 and 31 3 383 .

Turn spring strut until special tool 31 3 382 rests in indentation (1) of spring strut.

NOTE: In this way, the coil spring rests to optimum effect on special tools 31 3 382 and 31 3 383 .

Compress coil spring until stress on piston rod is relieved.

Fig. 74: Special Tools (31 3 382) And (31 3 383)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove cap.

Release nut with special tool 31 3 210 , grip piston rod if necessary.

Fig. 75: Special Tool (31 3 210)

Courtesy of BMW OF NORTH AMERICA, INC.

Remove support bearing (1), dust sleeve and shim (2).

Remove spring plate (3) with spring pad (4).

Remove spring strut with auxiliary damper, gaiter and lower spring pad sideways from tensioned coil spring.

Fig. 76: Spring Plate, Support Bearing And Dust Sleeve And Shim
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Coils of coil spring must be located completely in recess of special tools 31 3 382 and 31 3 383 when untensioned/tensioned!

Relieve tension on coil spring.

Remove coil spring from special tools 31 3 382 and 31 3 383 .

Installation:

Twist coil spring until lower end of coil spring (1) is flush with end (2) of special tool 31 3 383 .

Fig. 77: Coil Spring And Coil Spring End With Special Tools

Courtesy of BMW OF NORTH AMERICA, INC.

Assembly:

Check auxiliary damper (1), gaiter (2) and lower spring pad (3) for damage, replace if necessary.

Fig. 78: Lower Spring Pad, Auxiliary Damper And Gaiter
Courtesy of BMW OF NORTH AMERICA, INC.

Insert spring strut in tensioned coil spring and align to end of coil spring using lower spring pad.

Check support bearing (1) and upper spring pad (4) for damage, replace if necessary.

Attach upper spring plate (3) with upper spring pad (4) and shim (2) to piston rod.

Attach support bearing (1) with dust sleeve to piston rod.

Fig. 79: Spring Plate, Support Bearing And Dust Sleeve And Shim
Courtesy of BMW OF NORTH AMERICA, INC.

Replace self-locking nut and screw on as far as possible to avoid damaging the piston rod when relieving tension on the coil spring.

Relieve tension on coil spring slightly.

NOTE: **Make sure that lower and upper coils of coil spring rest completely in recess of spring plate.**

Tighten down nut with special tool 31 2 210 (grip piston rod in the process).

Tightening torque: 31 31 2AZ, see **31 31 SPRING STRUTS** .

Fully relieve tension on coil spring.

Fig. 80: Special Tool (31 3 210)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out wheel alignment check, see **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION** if a spring strut with support bearing was or has been installed without centering pin.

35 STABILIZER BAR

31 35 000 REMOVING AND INSTALLING/REPLACING FRONT STABILIZER

Special tools required:

See **00 MAINTENANCE AND GENERAL INFORMATION** , **31 FRONT AXLE** , **33 REAR AXLE**

- 00 2 040
- 31 4 051
- 31 4 052
- 33 3 274

WARNING: Danger to life!

Secure engine in installation position to prevent it from falling down, see 11 00 670 SECURING ENGINE IN INSTALLATION POSITION (N52) .

Necessary preliminary tasks:

- Secure engine in installation position, see 11 00 670 SECURING ENGINE IN INSTALLATION POSITION (N52) .
- If necessary, remove assembly underside protection, see 51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION .
- Remove reinforcement plate, see 31 10 010 Removing and installing/replacing reinforcement plate.
- If necessary, remove steering gear cover on both sides
- Partially detach front wheel arch trim on both sides in rear area, see 51 71 040 REMOVING AND INSTALLING/REPLACING FRONT LEFT OR RIGHT WHEEL ARCH COVER
- Remove double pivot of lower steering spindle from power steering gear, see 32 31 219 REMOVING AND INSTALLING/REPLACING DOUBLE JOINT WITH FLEXIBLE DISK .
- If necessary, disconnect plug connection from EH converter and remove line from front axle carrier
- If necessary, disconnect plug connection from ride-height sensor and remove line from front axle carrier
- If necessary, disconnect vacuum line for electrically operated valve at T-piece
- If necessary, remove bracket for pressure line from front axle carrier
- Remove stabilizer link on both sides from stabilizer, see 31 35 005 Removing and installing/replacing push rod (stabilizer link) for left/right stabilizer.

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

If necessary, position special tool 00 2 040 with a 2nd person helping on workshop jack.

Insert special tools 31 4 051 and 31 4 052 into corresponding mountings of special tool 00 2 040 .

Align special tool 00 2 040 to front axle subframe.

If necessary, lower special tool 33 3 274 .

Support front axle subframe by raising special tool 00 2 040 .

Fig. 81: Special Tools (31 4 052) And (31 4 051)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Pay attention to power steering hoses and lines when lowering and raising. Hoses/lines must not be kinked/tensioned/bent!

Release screws (1).

Tightening torque: 31 10 2AZ, see **31 10 FRONT AXLE SUSPENSION** .

Release screws (2, 3).

Tightening torque: 31 10 3AZ, see **31 10 FRONT AXLE SUSPENSION** .

If necessary, disconnect pressure line for power steering from front axle carrier.

Carefully lower front axle carrier with workshop jack.

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see **31 00 ... Notes on repairing threads**.

Fig. 82: Front Axle Carrier Bolts

Courtesy of BMW OF NORTH AMERICA, INC.

Replace all bolts.

Tighten down bolts (1) and then bolts (2, 3).

Release screws (1) and twist stabilizer towards front.

Remove retaining bracket (2) and rubber mount (3) on both sides.

Remove stabilizer sideways through wheel arch.

Installation:

Check rubber mount (3) on both sides, replace if necessary.

Keep retaining bracket (2), rubber mount (3) and stabilizer clean and free from oil and grease.

Tightening torque: 31 35 1AZ, see **31 35 STABILIZER BAR** .

Fig. 83: Retaining Bracket, Rubber Mount And Screws

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Carry out steering angle sensor adjustment

31 35 005 REMOVING AND INSTALLING/REPLACING PUSH ROD (STABILIZER LINK) FOR LEFT/RIGHT STABILIZER

Special tools required:

- **31 1 140 OPEN-END WRENCH WAF 16/18**

Release nut - grip with special tool 31 1 140 .

Remove hinged bracket (1) from stabilizer (2).

Installation:

Replace self-locking nut.

Tightening torque: 31 35 5AZ, see **31 35 STABILIZER BAR** .

Fig. 84: Removing Hinged Bracket From Stabilizer
Courtesy of BMW OF NORTH AMERICA, INC.

Release nut - grip with special tool 31 1 140 .

Remove hinged bracket (1) from stabilizer (2).

Installation:

Replace self-locking nut.

Tightening torque: 31 35 5AZ, see **31 35 STABILIZER BAR** .

Fig. 85: Removing Hinged Bracket From Stabilizer
Courtesy of BMW OF NORTH AMERICA, INC.

31 35 021 REPLACING RUBBER MOUNTS OF STABILIZER RETAINING FIXTURE ON FRONT AXLE SUBFRAME

Necessary preliminary tasks:

- Remove front underbody protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .
- If necessary, remove steering gear cover on both sides

Release screws (1) and remove stabilizer bar forward from front axle subframe.

Remove retaining bracket (2) and rubber mount (3) on both sides.

Installation:

Keep retaining bracket (2), rubber mount (3) and stabilizer clean and free from oil and grease.

Tightening torque: 31 35 1AZ, see **31 35 STABILIZER BAR** .

Fig. 86: Retaining Bracket, Rubber Mount And Screws
Courtesy of BMW OF NORTH AMERICA, INC.

50 FRONT AXLE GEARBOX

31 50 ... OVERVIEW OF FRONT DIFFERENTIAL / OUTPUT SHAFTS

[Safety precautions & general information](#)

- 1 [Output shaft / gaiters](#)
- 2 [Bearing block](#)
- 3 [Front differential](#)
- 4 [Shaft seal \(output shaft\)](#)

- 5
- 6
- 7

- [Shaft seal \(drive flange\)](#)
- [O-ring \(front differential\)](#)
- [O-ring \(bearing block\)](#)

Fig. 87: Front Differential / Output Shafts Components

Courtesy of BMW OF NORTH AMERICA, INC.

31 50 ... CHANGING FRONT DIFFERENTIAL OIL

IMPORTANT: Use only the approved front differential oil in this front differential.
Failure to comply with this requirement will result in serious damage to the differential!

NOTE: Only change oil when front differential is at normal operating temperature.

Necessary preliminary tasks:

- Remove reinforcement plate, see [31 10 010 Removing and installing/replacing reinforcement plate](#).

Checking/correcting front differential oil level:

Undo oil filler plug (1).

Check front differential oil level.

If necessary, pour in front differential oil up to lower edge of opening for oil filler plug (1).

Installation:

Replace sealing ring.

Tightening torque: 31 50 8AZ, see **31 50 FRONT AXLE DIFFERENTIAL** .

Fig. 88: Front Differential Oil Filler Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Changing front differential oil:

Place oil collecting apparatus underneath.

Remove oil drain plug (1).

Drain front differential oil.

Replace sealing ring, screw in oil drain plug (1) and tighten down.

Tightening torque: 31 50 8AZ, see **31 50 FRONT AXLE DIFFERENTIAL** .

Undo oil filler plug (2).

Pour in front differential oil up to lower edge of opening for oil filler plug (2).

Fig. 89: Front Differential Oil Filler And Drain Plug
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Replace sealing ring.

Tightening torque: 31 50 8AZ, see **31 50 FRONT AXLE DIFFERENTIAL** .

31 50 001 REMOVING AND INSTALLING/REPLACING FRONT DIFFERENTIAL

Necessary preliminary tasks:

- Remove front underbody protection, see **51 47 490 REMOVING AND INSTALLING / REPLACING FRONT UNDERBODY PROTECTION** .
- Drain and dispose of front differential oil, see **31 50 ... Changing front differential oil.**
- Remove left output shaft, see **31 60 000 Removing and installing/replacing left or right output shaft.**
- Press right output shaft approx. 7 to 8 cm out of front differential, see **31 60 ... Pressing output shaft out of drive flange (wheel hub) and drawing in.**
- Remove front propeller shaft, see **REMOVAL & INSTALLATION** .
- Replacement only:
 - Replace front axle output flange on transfer case.

NOTE: **Replace the output flange to ensure a clean seal on the transfer case.**

IMPORTANT: **Grip front differential firmly while releasing last bolt in order to avoid damage caused by the differential falling.**

Version with automatic transmission: If necessary, disconnect hydraulic lines from oil sump.

Release screws (1).

Tightening torque: 31 50 7AZ, see **31 50 FRONT AXLE DIFFERENTIAL** .

Detach front differential from oil sump and carefully feed out towards bottom.

Installation:

Replace O-ring if necessary.

Coat O-ring with front differential oil.

R31 1023

Fig. 90: Front Differential Screws

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Drain and dispose of front differential oil, see **31 50 ... Changing front differential oil.**
- Check transfer case oil level, see **27 00 ... TOPPING UP/CHANGING TRANSFER CASE OIL** , correct if necessary
- Check fluid level in automatic transmission, correct if necessary

NOTE: Only necessary if the hydraulic lines have been disconnected from the automatic transmission / transmission oil cooler.

51 SEAL AND O-RINGS

31 51 010 REPLACING RADIAL SEAL FOR DRIVE FLANGE OF FRONT DIFFERENTIAL

Special tools required:

See **23 MANUAL TRANSMISSION** , **31 FRONT AXLE** , **33 REAR AXLE**

- 23 0 020
- 31 5 130

- 33 1 150

Necessary preliminary tasks:

- Remove reinforcement plate, see **31 10 010 Removing and installing/replacing reinforcement plate.**
- Remove front propeller shaft, see **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY .**

Mark position of nut with respect to shaft with punch marks (arrow).

Lever out lockplate (1) with a suitable tool.

Fig. 91: Locating Lockplate Punch Marks
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Risk of damage!
Do not place special tool on threaded holes of drive flange.

Secure drive flange with special tool 23 0 020 against turning and release nut (1).

Fig. 92: Special Tool (23 0 020) And Nut
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Risk of damage!
Mount special tool only with longer screws (M10x30) on drive flange.

Pull drive flange off drive shaft with special tool 33 1 150 .

Fig. 93: Special Tool (33 1 150)
Courtesy of BMW OF NORTH AMERICA, INC.

Lever shaft seal (1) out of front differential with a suitable screwdriver (2).

Fig. 94: Shaft Seal And Screwdriver
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Drive in shaft seal with special tool 31 5 130 as far as it will go.

Coat sealing lips of new shaft seal (1) with front differential oil.

Fig. 95: Special Tool (31 5 130)

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Risk of damage!

Do not tighten nut beyond punch marks. Otherwise the clamping sleeve will be damaged.

Clean drive flange and attach.

Tighten down nut until punch marks on nut and shaft are aligned.

Install new lockplate (1).

Fig. 96: Locating Lockplate Punch Marks

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check front differential oil, see 31 50 ... Changing front differential oil.

31 51 015 REPLACING SHAFT SEAL FOR LEFT OUTPUT SHAFT

Special tools required:

- 31 5 130 SET OF IMPACT DRIFTS

Necessary preliminary tasks:

- Remove left output shaft, see 31 60 000 Removing and installing/replacing left or right output shaft.

Lever shaft seal (1) with a screwdriver (2) out of front differential (3).

Fig. 97: Shaft Seal, Screwdriver And Front Differential
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Protective sleeve (2) serves to protect the sealing lips of shaft seal (1) from being damaged when the output shaft is inserted into the front differential.

Fig. 98: Protective Sleeve And Shaft Seal
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Drive in shaft seal with special tool 31 5 130 as far as it will go.

Fig. 99: Special Tool (31 5 130)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check front differential oil, see **31 50 ... Changing front differential oil.**

31 51 020 REPLACING SHAFT SEAL FOR RIGHT OUTPUT SHAFT

Special tools required:

- 31 5 130

Necessary preliminary tasks:

- Press right output shaft approx. 7 to 8 cm out of front differential, see **31 60 ... Pressing output shaft out of drive flange (wheel hub) and drawing in.**

Lever shaft seal (1) with a screwdriver (2) out of bearing block (3).

Fig. 100: Shaft Seal, Screwdriver And Bearing Block
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Protective sleeve (2) serves to protect the sealing lips of shaft seal (1) from being damaged when the output shaft is inserted into the bearing block.

Fig. 101: Protective Sleeve And Shaft Seal
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Drive in shaft seal with special tool 31 5 130 as far as it will go.

Fig. 102: Special Tool (31 5 130)

Courtesy of BMW OF NORTH AMERICA, INC.

31 51 060 REPLACING O-RING FOR FRONT DIFFERENTIAL ON RIGHT

Necessary preliminary tasks:

- Remove front differential, see **31 50 001 Removing and installing/replacing front differential.**

Remove O-ring (1) with a suitable tool from front differential.

Installation:

Insert O-ring (1) in groove and coat with front differential oil.

Fig. 103: O-Ring

Courtesy of BMW OF NORTH AMERICA, INC.

31 51 065 REPLACING O-RING FOR BEARING BLOCK

Necessary preliminary tasks:

- Remove bearing block, see **31 53 040 Removing and installing/replacing right output shaft bearing block**.

Remove O-ring (1) with a suitable tool from bearing block (2).

Installation:

Insert O-ring (1) in groove and coat with front differential oil.

Fig. 104: O-Ring And Bearing Block
 Courtesy of BMW OF NORTH AMERICA, INC.

53 DIFFERENTIAL WITH BEARINGS

31 53 040 REMOVING AND INSTALLING/REPLACING RIGHT OUTPUT SHAFT BEARING BLOCK

Necessary preliminary tasks:

- Press right output shaft approx. 7 to 8 cm out of front differential, see **31 60 ... Pressing output shaft out of drive flange (wheel hub) and drawing in**.

N46:

Release screw (1) and remove heat shield from bearing block.

Tightening torque: 31 60 3AZ, see **31 60 OUTPUT SHAFT** .

Release screws (2) and remove bearing block support with heat shield.

Tightening torque: 31 60 2AZ, see **31 60 OUTPUT SHAFT** .

Fig. 105: Heat Shield Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Release grounding strap on bearing block.

Release screws and remove bearing block (1) from oil sump.

Installation:

Replace O-ring / remove protective caps.

Tightening torque: 31 60 1AZ, see **31 60 OUTPUT SHAFT** .

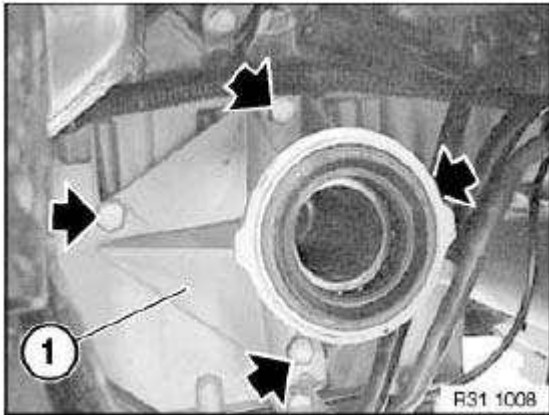

Fig. 106: Locating Bearing Block Screws

Courtesy of BMW OF NORTH AMERICA, INC.

60 OUTPUT SHAFT

31 60 ... PRESSING OUTPUT SHAFT OUT OF DRIVE FLANGE (WHEEL HUB) AND DRAWING IN

Special tools required:

See **33 REAR AXLE**

- 33 2 111
- 33 2 115
- 33 2 116
- 33 2 117
- 33 2 118
- 33 2 160
- 33 2 201
- 33 2 202
- 33 2 203
- 33 2 205
- 33 2 207
- 33 2 208
- 33 5 070

WARNING: Risk of injury!

It is not permitted to use the impact screwdriver to press out and draw in the output shaft.

IMPORTANT: Risk of damage!

To avoid damaging the output shaft and adjoining parts, it is essential during the pressing-out process to repeatedly check and if necessary correct the position of the output shaft.

IMPORTANT: To avoid damaging the dust sleeve, use special tool 33 2 160 to press out and draw in the output shaft after removing the brake disk.

NOTE: Rounded inside edge of special tool 33 2 160 must point to drive flange.

Fig. 107: Special Tool (33 2 160)

Courtesy of BMW OF NORTH AMERICA, INC.

Special tool 33 2 200:

Screw on special tool 33 2 203 , 33 2 207 and 33 2 201 with all wheel studs to drive flange.

Press output shaft out of drive flange; in so doing, grip basic body 33 2 201 with special tools 33 2 202 and 33 5 070 .

Fig. 108: Special Tools (33 2 201), (33 2 202) And (33 2 203)

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: No oil permitted on shaft journal thread!

Lightly oil spline teeth of output shaft.

Insert output shaft into drive flange.

Screw special tool 33 2 205 onto output shaft.

Fig. 109: Special Tool (33 2 205)
 Courtesy of BMW OF NORTH AMERICA, INC.

Mount special tool 33 2 201 with three wheel studs to drive flange.

Draw in output shaft with special tool 33 2 208 up to stop; in so doing, grip basic body 33 2 201 with special tools 33 2 202 and 33 5 070 .

Fig. 110: Special Tools (33 2 201), (33 2 202) And (33 2 208)
 Courtesy of BMW OF NORTH AMERICA, INC.

Special tool 33 2 100:

Screw on special tool 33 2 111 , 33 2 117 and 33 2 116 with all wheel studs to drive flange.

Press output shaft out of drive flange; in so doing, grip basic body 33 2 116 with special tools 33 2 202 and 33 5 070 .

Fig. 111: Special Tools (33 2 116), (33 2 111) And (33 2 117)
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: No oil permitted on shaft journal thread!

Lightly oil spline teeth of output shaft.

Insert output shaft into drive flange.

Screw special tool 33 2 118 onto output shaft.

Fig. 112: Special Tool (33 2 118)
 Courtesy of BMW OF NORTH AMERICA, INC.

Mount special tool 33 2 116 with three wheel studs to drive flange.

Draw in output shaft with special tool 33 2 115 up to stop; in so doing, grip basic body 33 2 116 with special tools 33 2 202 and 33 5 070 .

Fig. 113: Special Tools (33 2 116), (33 2 115) And (33 2 118)

31 60 000 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT OUTPUT SHAFT

Special tools required:

- **31 5 110 REMOVAL FORK**

IMPORTANT: Risk of damage!

Do not drive output shaft out of drive flange with an impact tool.

Remove front wheels, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .

Release collar nut; to do so, press brake pedal to floor.

Installation:

Replace collar nut, apply a light coating of oil to contact surface and tighten down.

Tightening torque: 31 21 2AZ, see **31 21 WHEEL BEARINGS AND STEERING KNUCKLE** .

Secure collar nut by peening on flat areas of output shaft.

Fig. 114: Locating Collar Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Remove reinforcement plate, see **31 10 010 Removing and installing/replacing reinforcement plate.**

If necessary, remove steering gear cover at side

Remove tie rod end from swivel bearing, see **32 21 151 REPLACING LEFT OR RIGHT TIE ROD .**

Remove guide joint from swivel bearing, see **31 12 026 Removing and installing/replacing guide joint in swivel bearing.**

Remove control arm from swivel bearing, see **31 12 000 Removing and installing/replacing left or right control arm.**

Remove stabilizer link from stabilizer, see **31 35 005 Removing and installing/replacing push rod (stabilizer link) for left/right stabilizer.**

Remove front pulse generator, see **34 52 525 REPLACING ONE FRONT PULSE GENERATOR** from swivel bearing.

Turn swivel bearing to one side.

Press output shaft out of drive flange, see **31 60 ... Pressing output shaft out of drive flange (wheel hub) and drawing in.**

Press output shaft with special tool 31 5 110 out of front differential/bearing block and remove.

Installation:

Replace shaft seal, see **31 51 015 Replacing shaft seal for left output shaft** in front differential/bearing block and coat sealing lips with front differential oil.

Replace retaining ring and slide in output shaft over resistance of retaining ring. Output shaft must snap audibly

into place.

**IMPORTANT: High installation forces indicate that the spline teeth on the output shaft/rear differential side gear are damaged/deformed!
Check spline teeth, replaced damaged parts.**

Fig. 115: Removing Output Shaft From Front Differential/Bearing Block
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check front differential oil, see **31 50 ... Changing front differential oil.**

31 60 530 REPLACING AN OUTPUT SHAFT GAITER (ON TRANSMISSION SIDE) (OUTPUT SHAFT REMOVED)

NOTE: Procedure is described in the document " both output shaft gaiters..." see **31 60 535 Replacing both gaiters on left and right of output shaft.**

31 60 535 REPLACING BOTH GAITERS ON LEFT AND RIGHT OF OUTPUT SHAFT

Necessary preliminary tasks:

- Remove and clean output shaft, see **31 60 000 Removing and installing/replacing left or right output shaft.**

Grip output shaft (1) in vice with aluminium clamping jaws.

NOTE: 2 = Joint, wheel side
3 = Joint, transmission side

Fig. 116: Output Shaft, Wheel And Transmission Side Joint
Courtesy of BMW OF NORTH AMERICA, INC.

Replacing gaiter of wheel-side joint:

Release band clamps (1, 2).

Pull back gaiter (3).

Fig. 117: Pulling Back Gaiter
Courtesy of BMW OF NORTH AMERICA, INC.

Press off joint (1) via contact pressure of retaining ring on shaft (2).

Installation:

Push on joint until retaining ring can be heard to snap into place.

Fig. 118: Joint And Shaft

Courtesy of BMW OF NORTH AMERICA, INC.

Lift out retaining ring (1).

Installation:

Replace retaining ring (1).

Fig. 119: Retaining Ring

Courtesy of BMW OF NORTH AMERICA, INC.

Pull off gaiter (1) over shaft (2).

Carefully clean all parts with a cloth.

NOTE: Regrease constant-velocity joint with the grease from the repair kit.

Fig. 120: Pulling Gaiter Over Shaft

Courtesy of BMW OF NORTH AMERICA, INC.

Replacing gaiter of transmission-side joint:

Release band clamps (1, 2).

Pull back gaiter (3).

Detach tulip element (4).

Fig. 121: Detaching Tulip Element

Courtesy of BMW OF NORTH AMERICA, INC.

Remove retaining ring (1).

Installation:

Replace retaining ring (1).

Detach tripod element (2) from shaft (3).

Pull off gaiter over shaft (3).

Carefully clean all parts with a cloth.

Fig. 122: Retaining Ring, Tripod Element And Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Flat side (2) of tripod element (1) must point to retaining ring.

Fig. 123: Tripod Element Flat Side
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Before pushing gaiter onto shaft: assemble gaiter (1) and gaiter adapter (2).

NOTE: Regrease constant-velocity joint (tripod element) with the grease from the repair kit.

Fig. 124: Gaiter And Gaiter Adapter
 Courtesy of BMW OF NORTH AMERICA, INC.

90 TROUBLESHOOTING

31 90 ... FRONT AXLE TROUBLESHOOTING

Follow troubleshooting for steering/shock absorbers, see **31 90 ... Troubleshooting shock absorber.**

STEERING/SHOCK ABSORBERS TROUBLESHOOTING CHART

Fault	Cause	Remedy
Grinding noise (louder when negotiating bends)	Wheel bearings faulty	Replace wheel bearings 31 21 180 Replacing bearing for front wheel
Vibration	Wheel imbalance	Balance wheels 36 10 508 STATIONARY WHEEL BALANCING
	Radial/lateral rim runout	Check rims 36 12 001 REPLACING A TYRE , replace if necessary
	Radial tire runout	Match or replace tires 36 10 209 CHECKING FRONT AND REAR WHEEL FOR FACE AND RADIAL RUNOUT
Steering-wheel shake	Wheel imbalance	Balance wheels 36 10 508 STATIONARY WHEEL BALANCING
	Radial/lateral rim runout	Check rims 36 12 001 REPLACING A TYRE , replace if necessary
	Rubber mount of control arm faulty	Replace rubber mounts on both control arms 31 12 135 Replacing rubber mounts on both control arms
	Ball joint in control arm worn	Replace control arms 31 12 135 Replacing rubber mounts on both control arms
	Rubber mount of tension strut faulty	Replace rubber mounts on both tension struts 31 12 138 Replacing rubber mounts on both tension struts
	Guide joint of tension strut worn	Replace guide joint, see 31 12 026 Removing and installing/replacing guide joint in swivel bearing

	Refer to <u>32 90 ... TROUBLESHOOTING ON STEERING</u>	
Excessive steering wheel play/steering wheel inclination	Rubber mount of control arm faulty	Replace rubber mounts on both control arms <u>31 12 135 Replacing rubber mounts on both control arms</u>
	Ball joint in control arm worn	Replace control arms <u>31 12 135 Replacing rubber mounts on both control arms</u>
	Rubber mount of tension strut faulty	Replace rubber mounts on both tension struts <u>31 12 138 Replacing rubber mounts on both tension struts</u>
	Guide joint of tension strut worn	Replace guide joint, see <u>31 12 026 Removing and installing/replacing guide joint in swivel bearing</u>
	Refer to <u>32 90 ... TROUBLESHOOTING ON STEERING</u>	
Rattling noise	Bolts for reinforcement plate loose	Tighten down bolts (refer to <u>31 10 010 Removing and installing/replacing reinforcement plate</u>)
	Bolts for front axle carrier to engine carrier loose	Replace bolts (refer to <u>31 11 506 Lowering/raising front axle carrier</u>)
	Bolt for spring strut to swivel bearing loose	Replace bolt & nut (refer to <u>31 31 031 Replacing front left or right spring strut shock absorber</u>)
	Ball joint in control arm worn	Replace control arms <u>31 12 135 Replacing rubber mounts on both control arms</u>
	Guide joint of tension strut worn	Replace guide joint, see <u>31 12 026 Removing and installing/replacing guide joint in swivel bearing</u>
	Rubber mounts for stabilizer bar bracket faulty	Replace both rubber mounts of stabilizer bar bracket <u>31 35 021 Replacing rubber mounts of stabilizer retaining fixture on front axle subframe</u>
Excessive tire wear	Ball joints on stabilizer link(s) worn	Replace both stabilizer links <u>31 35 005 Removing and installing/replacing push rod (stabilizer link) for left/right stabilizer</u>
	Front or rear axle alignment incorrectly adjusted	Check suspension components for damage; if necessary, carry out chassis/wheel alignment check <u>32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION</u>

31 90 ... TROUBLESHOOTING SHOCK ABSORBER

Read and comply with Information on replacing shock absorbers, see 31 00 ... Information on replacing shock absorbers.

SHOCK ABSORBER TROUBLESHOOTING CHART

Fault	Cause	Remedy
Wheel knocking (bottoming)	Rubber damper faulty	Visually inspect auxiliary spring for cracking, replace auxiliary spring <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
	Shock absorber leaking	Replace shock absorber <u>31 31 031 Replacing</u>

	(oil/gas)	<u>front left or right spring strut shock absorber</u>
Rattling noise	Shock absorber mounting loose	Replace shock absorber <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
	Support bearing faulty/hardened	Replace support bearing <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
	Shock absorber leaking (oil/gas)	Replace shock absorber <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
Worn down areas (flattened areas) on tire profile	Shock absorber leaking (oil/gas)	Replace shock absorber <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
Long after-swinging of body after driving over rough road	Shock absorber leaking (insufficient shock absorber effect)	Replace shock absorber <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
Building-up of body in case of successive uneven surfaces	Shock absorber leaking (insufficient shock absorber effect)	Replace shock absorber <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
Wheels jumping even on normal road surfaces	Shock absorber leaking (insufficient shock absorber effect)	Replace shock absorber <u>31 31 031 Replacing front left or right spring strut shock absorber</u>
Whistling noises	Separating skin in vent holes of auxiliary spring	Remove separating skin

SUSPENSION

Integrated Suspension Systems - Operating Fluids

1.0 GENERAL INFORMATION

LHM hydraulic fluid has a favorable viscosity range and permits problem-free operation of the self-leveling rear suspension at very low and very high temperatures. The solidification point is $-78^{\circ}\text{F}/-61^{\circ}\text{C}$.

2.0 APPROVED HYDRAULIC FLUIDS

E24, E28 produced prior to 9/87

Pentosin CHF 4548 was used for initial factory filling.

For filling up and replacement the following oil is to be used:

Pentosin CHF 7.1 BMW Part No. 81 22 1 468 879

Pentosin CHF 4548 and CHF 7.1 can be mixed in these cars.

For complete system oil replacement:

Reputable brand name LHM oils (green color) can also be used (Shell, Castrol, Exxon, etc.)

NOTE: Mixing of CHF and LHM oils is not permitted.

E24, E28 produced since 9/87

Pentosin CHF 7.1 is used for initial factory filling.

For filling up and replacement use only Pentosin CHF 7.1

BMW Part No. 81 22 1 468 879

For complete oil replacement:

Reputable brand name LHM oils (green color) can also be used.

NOTE: Mixing of CHF 7.1 and LHM oils is not permitted.

E32 produced prior to 9/91

Use only Pentosin CHF 7.1.

Mixing with other oils is not permitted.

E32, E34 produced since 9/91

Use only Pentosin CHF 11S

NOTE: All cars have a label indicating the respective type on the hydraulic fluid reservoir. Since both Pentosin CHF 11S and CHF 7.1 are green in color, the reservoir label must be carefully checked prior to adding fluid.

Mixing CHF 11S and CHF 7.1 is not permitted.

Pentosin CHF 11S BMW Part No. 82 11 1 468 041

E38 produced since 1/94

Use only Pentosin CHF 11S

NOTE: All cars have a label indicating the respective type on the hydraulic fluid reservoir. Since both Pentosin CHF 11S and CHF 7.1 are green in color, the reservoir label must be carefully checked prior to adding fluid.

Mixing CHF 11S and CHF 7.1 is not permitted.

Pentosin CHF 11S BMW Part No. 82 11 1 468 041

3.0 CHECKING HYDRAULIC FLUID LEVELS

The hydraulic fluid level must be checked on an unloaded car and at every Inspection I or, for cars without a Service Indicator, at 10,000 mi/15,000 km intervals.

NOTE: Not required as of 1993 model year vehicles.

Special checking instructions apply to the E32.

NOTE: Never fill above the "max" mark. There are no replacement intervals for hydraulic fluid.

Integrated Suspension Systems - Repair Instructions - X3

00 GENERAL

00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Pour oil only into appropriately marked containers
- Do not pour oil into drinking vessels (drinks bottles, glasses, cups or mugs)
- Observe country-specific safety regulations

First aid measures:

- Do not induce vomiting.

If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

If the person affected is unconscious, do not administer anything by mouth, place the person in the recovery position and seek immediate medical attention.

00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear protective goggles
- Wear oil-resistant protective gloves
- Observe country-specific safety regulations

First aid measures:

- Eye contact: Rinse eyes immediately with plenty of water for at least 15 minutes; if available, use an eye-rinsing bottle. If irritation of the eyes persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

NOTE: Do not use solvents/thinners.

00 SAFETY INSTRUCTIONS FOR HANDLING OIL

WARNING: Danger of poisoning if oil is ingested/absorbed through the skin! See 00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN .

Risk of injury if oil comes into contact with eyes and skin! See 00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN .

Recycling:

Observe country-specific waste-disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

NOTE: Do not flush oil away with water or aqueous cleaning agents.

14 ELECTRICAL COMPONENTS

37 14 511 REPLACING FRONT RIDE-HEIGHT SENSOR

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTRO STATIC DISCHARGE) .

Disconnect plug connection (1).

Release nut (2) and disconnect jointed rod.

Tightening torque: 37 14 7AZ , see 37 14 ELECTRIC COMPONENTS .

Release screws and remove ride-height sensor (4).

Installation:

Sensor lever (3) must point from ride-height sensor (4) to right front wheel.

Tightening torque: 37 14 6AZ , see 37 14 ELECTRIC COMPONENTS .

After installation:

- Check headlight adjustment, correct if necessary, see 63 10 004 ADJUSTING HEADLIGHTS .

Fig. 1: Plug Connection, Nut And Lever
Courtesy of BMW OF NORTH AMERICA, INC.

37 14 512 REPLACING REAR RIDE-HEIGHT SENSOR (EARLY VERSION)

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTRO STATIC DISCHARGE) .

Disconnect plug connection (1).

Release nut (3) and disconnect jointed rod.

Tightening torque: 37 14 7AZ , see **37 14 ELECTRIC COMPONENTS** .

Release screws (4) and remove ride-height sensor.

Installation:

Sensor lever (2) must point from ride-height sensor to right rear wheel.

Tightening torque: 37 14 6AZ , see **37 14 ELECTRIC COMPONENTS** .

Fig. 2: Plug Connection, Nut, Screws And Sensor Lever
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check headlight adjustment, correct if necessary, see **63 10 004 ADJUSTING HEADLIGHTS** .

37 14 512 REPLACING REAR RIDE-HEIGHT SENSOR

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTRO STATIC DISCHARGE) .

Disconnect connector connection. Release nut (1) and disconnect jointed rod. Tightening torque, see 37 14 4AZ in **37 14 ELECTRIC COMPONENTS** . Release screws (2) and remove ride-height sensor. Tightening torque, see 37 14 3AZ in **37 14 ELECTRIC COMPONENTS** .

Fig. 3: Release Nut (1) And Disconnect Jointed Rod
Courtesy of BMW OF NORTH AMERICA, INC.

After installation: Check headlight setting, correct if necessary. Carry out ride-height adjustment (on vehicles with VDC).

00 GENERAL

00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Pour oil only into appropriately marked containers
- Do not pour oil into drinking vessels (drinks bottles, glasses, cups or mugs)
- Observe country-specific safety regulations

First aid measures:

- Do not induce vomiting.

If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

If the person affected is unconscious, do not administer anything by mouth, place the person in the recovery position and seek immediate medical attention.

00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear protective goggles
- Wear oil-resistant protective gloves
- Observe country-specific safety regulations

First aid measures:

- Eye contact: Rinse eyes immediately with plenty of water for at least 15 minutes; if available, use an eye-rinsing bottle. If irritation of the eyes persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

NOTE: Do not use solvents/thinners.

00 SAFETY INSTRUCTIONS FOR HANDLING OIL

**WARNING: Danger of poisoning if oil is ingested/absorbed through the skin!
Risk of injury if oil comes into contact with eyes and skin!**

Recycling:

Observe country-specific waste-disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

NOTE: Do not flush oil away with water or aqueous cleaning agents.

00 ... RAISING VEHICLE WITH TROLLEY JACK

IMPORTANT: Observe the following trolley-jack-related instructions:

1. Use only BMW-distributed/approved trolley jacks which have rubber plate contact points.
2. Trolley jacks must be regularly serviced and always checked for functional reliability before they are used!
3. Check the rubber plate on the trolley jack prior to each use, replacing if necessary.

Fig. 1: Trolley Jack

Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: The vehicle may be raised with a trolley jack only at the following jacking points!
Risk of damage: It is not permitted to raise the vehicle at the rear differential cover!

- 1 Car jacking point
- 2 Side car jacking points
- 3 Rear differential

Fig. 2: Vehicle Jacking Points

Courtesy of BMW OF NORTH AMERICA, INC.

[Safety precautions & general information](#)

Fig. 3: Rear Axle Layout Components

Courtesy of BMW OF NORTH AMERICA, INC.

33 00 ... INFORMATION ON REPLACING SHOCK ABSORBERS

Facts:

When a shock absorber is faulty on one side (leaking, noises, limit values exceeded on the shock tester), often both shock absorbers on the axle in question are replaced.

E32, E34, E38, E39: In the case of rear spring struts with ride-height control, there is always a slight oil spillage on the piston rod. These spring struts are permitted to be wet with oil over a maximum of half the shock absorber length on the outer tube, i.e. they are permitted to "sweat".

Consequence:

This is not necessary for technical reasons and causes the manufacturer not to recognize the unnecessarily removed shock absorbers as damaged parts. Unnecessarily high costs for the customer can be avoided by replacing the shock absorber on one side only.

Procedure:

Shock absorbers may be replaced on one side only until they have completed 50 000 km service.

Exception: On all M-GmbH models, when a limit value is exceeded on one side, it is still necessary always to replace both shock absorbers on the relevant axle.

33 00 ... NOTES ON REPAIRING THREADS

IMPORTANT: Install Helicoil thread inserts so that they are flush with the original thread.

NOTE: Damaged threads in the frame side member may be repaired with Helicoil thread inserts. Comply with the procedure described in the example, see 31 00 ... NOTES ON REPAIRING THREADS .

Fig. 4: Identifying Helicoil Thread

Courtesy of BMW OF NORTH AMERICA, INC.

33 00 ... REAR AXLE: WHEEL/CHASSIS ALIGNMENT CHECK MUST BE CARRIED OUT AFTER THE FOLLOWING WORK

Fig. 5: Rear Axle Carrier, Lower Control Arm And Trailing Arm
Courtesy of BMW OF NORTH AMERICA, INC.

A wheel/chassis alignment check, see **32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE** must be carried out after the following work:

- Release of following screw/bolt connections:
 - Rear axle carrier to body
 - Bearing block to trailing arm / body
 - Upper control arm to rear axle carrier / trailing arm
 - Lower control arm to rear axle carrier / trailing arm
- Replacement of following parts:
 1. Rear axle carrier / rubber mount
 2. Lower control arm / rubber mount
 3. Trailing arm / rubber mount / bearing block / ball joint
 4. Upper control arm / rubber mount / ball joint

K = Compact L = Light-running FL = Facelift from 09/2006			

33 10 010 REMOVING AND INSTALLING/REPLACING REAR DIFFERENTIAL

Special tools required:

- **33 4 420 SUPPORT**

IMPORTANT: Risk of damage
Refit spacer (1).

Use only approved rear differential oils!

Fig. 7: Refit Spacer

Courtesy of BMW OF NORTH AMERICA, INC.

Necessary preliminary tasks:

- Lower exhaust system in rear area, see **18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM** .
- Remove output shaft from rear differential at both ends and tie back, see **33 21 001 Removing and installing / replacing left output shaft**.
- Remove propeller shaft from rear differential and tie back, see **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Remove compression strut and insert bolts for rear axle carrier at front until contact is made, see **33 32 160 Removing and installing/replacing compression strut for rear axle carrier**.

Support rear differential with workshop jack and special tool 33 4 420 .

IMPORTANT: Observe gap between special tool 33 4 420 and dust plates (1).

To avoid grinding noises, make sure the dust plates (1) are not damaged (e.g. bent).

Fig. 8: Dust Plates With Special Tool (33 4 420)
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1).

Fig. 9: Rear Differential Screw
Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten nut.

Unscrew bolt to center of car; if necessary, remove spacer.

Slowly lower workshop jack and tip rear differential out towards rear.

Fig. 10: Locating Rear Differential Nut
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Adhere to the following installation sequence in order to prevent distortion of the rear differential during installation and thereby avoid potential complaints about noise.

Installation sequence:

1. Install rear differential with workshop jack and special tool 33 4 420 .
2. Insert bolts (1) (do not tighten down)
3. Insert bolt (2); if necessary, fit spacer
4. Replace and screw on nut (3) (do not tighten down)
5. Lower workshop jack
6. Install compression strut, see **33 32 160 Removing and installing/replacing compression strut for rear axle carrier.**
7. Tighten down screws (1)

Tightening torque: 33 17 1AZ, see **33 17 FINAL DRIVE UNIT MOUNTINGS** .

8. Tighten nut (3)

Tightening torque: 33 17 1AZ, see **33 17 FINAL DRIVE UNIT MOUNTINGS** .

Fig. 11: Rear Differential Bolt And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check rear differential oil level, correct if necessary, see **00 11 ... Checking/topping up oil level in rear differential.**

11 FINAL DRIVE WITH COVER

00 11 ... CHECKING/TOPPING UP OIL LEVEL IN REAR DIFFERENTIAL

IMPORTANT: Risk of damage!

To avoid serious damage to the rear differential, it is essential to use only approved gear oils in the differential.

Undo oil filler plug (1).

Check oil level.

If necessary, pour in rear differential oil up to lower edge of opening for oil filler plug (1).

Fig. 12: Oil Filler Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

- A. Oil filler plug with sealing ring:

Replace sealing ring (1).

Tightening torque: 33 11 3AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

- B. Oil filler plug with O-ring:

Replace oil filler plug (2).

Tightening torque: 33 11 9AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Fig. 13: Oil Filler Plug With Sealing Ring

Courtesy of BMW OF NORTH AMERICA, INC.

00 11 259 OIL CHANGE IN REAR DIFFERENTIAL INCL. USED OIL DISPOSAL

IMPORTANT: Risk of damage!

To avoid serious damage to the rear differential, it is essential to use only approved transmission oils in the differential.

NOTE:

The oil does not need to be changed in rear differentials carrying the "Life-Time-Oil" sticker.

Only change oil when rear differential is at normal operating temperature.

Recycling:

Catch and dispose of emerging differential oil.

Observe country-specific waste-disposal regulations

Oil drain plug present:

Place oil collecting apparatus underneath.

Remove oil drain plug (1).

Drain and dispose of differential oil.

Undo oil filler plug (2).

Add differential oil up to lower edge of opening for oil filler plug.

Fig. 14: Oil Filler Plug And Oil Drain Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

- A. Oil drain or oil filler plug with sealing ring:

Replace sealing ring (1).

Tightening torque: 33 11 3AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

- B. Oil drain or oil filler plug with O-ring:

Replace oil drain or oil filler plug (2).

Tightening torque: 33 11 9AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Fig. 15: Oil Filler Plug With Sealing Ring
 Courtesy of BMW OF NORTH AMERICA, INC.

No oil drain plug:

Undo oil filler plug (1).

Drain and dispose of differential oil.

Add differential oil up to lower edge of opening for oil filler plug (1).

Fig. 16: Oil Filler Plug
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

A. Oil filler plug with sealing ring:

Replace sealing ring (1).

Tightening torque: 33 11 3AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

B. Oil filler plug with O-ring:

Replace oil filler plug (2).

Tightening torque: 33 11 9AZ, see 33 11 REAR DIFFERENTIAL CASE WITH COVER .

Fig. 17: Oil Filler Plug With Sealing Ring
Courtesy of BMW OF NORTH AMERICA, INC.

33 11 ... REPLACING REAR COVER GASKET ON REAR DIFFERENTIAL (168K)

IMPORTANT: To avoid leaks from the rear differential cover, do not use a paper gasket in cars with liquid gaskets!
To prevent the differential oil from foaming over, make sure that no remnants of the liquid gasket are pressed into the rear differential housing.

Release screw (1).

Tightening torque (M10x60): 33 11 1AZ, see 33 11 REAR DIFFERENTIAL CASE WITH COVER .

Unscrew screws (2).

Tightening torque (M10x25): 33 11 1AZ, see 33 11 REAR DIFFERENTIAL CASE WITH COVER .

Remove cover.

If necessary, remove remnants of liquid gasket with scraper.

Clean sealing face on cover and rear differential.

Installation:

If a paper gasket was fitted, a paper or liquid gasket can be used.

The liquid gasket can be found in Main Group 33 in the Electronic Parts Catalogue.

Fig. 18: Rear Differential Cover Screw (168K)
Courtesy of BMW OF NORTH AMERICA, INC.

33 11 ... REPLACING REAR COVER GASKET ON REAR DIFFERENTIAL (188K)

IMPORTANT: To avoid leaks from the rear differential cover, do not use a paper gasket in cars with liquid gaskets!
To prevent the differential oil from foaming over, make sure that no remnants of the liquid gasket are pressed into the rear differential housing.

Release screws (1).

Tightening torque (M10x75): 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Unscrew screws (2).

Tightening torque (M10x25): 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Remove cover.

If necessary, remove remnants of liquid gasket with scraper.

Clean sealing face on cover and rear differential.

Installation:

If a paper gasket was fitted, a paper or liquid gasket can be used.

The liquid gasket can be found in Main Group 33 in the Electronic Parts Catalogue.

Fig. 19: Rear Differential Cover Screw (188K)
Courtesy of BMW OF NORTH AMERICA, INC.

33 11 ... REPLACING REAR COVER GASKET ON REAR DIFFERENTIAL (188L / 188LW)

IMPORTANT: To avoid leaks from the rear differential cover, do not use a paper gasket in cars with liquid gaskets!
To prevent the differential oil from foaming over, make sure that no remnants of the liquid gasket are pressed into the rear differential housing.

Release screws (1).

Tightening torque (M10x60): 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Unscrew screws (2).

Tightening torque (M10x25): 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Remove cover.

If necessary, remove remnants of liquid gasket with scraper.

Clean sealing face on cover and rear differential.

Installation:

If a paper gasket was fitted, a paper or liquid gasket can be used.

The liquid gasket can be found in Main Group 33 in the Electronic Parts Catalogue.

Fig. 20: Rear Differential Cover Screw (188L/188LW)
Courtesy of BMW OF NORTH AMERICA, INC.

33 11 ... REPLACING REAR COVER GASKET ON REAR DIFFERENTIAL (215K)

IMPORTANT: To avoid leaks from the rear differential cover, do not use a paper gasket in cars with liquid gaskets!
To prevent the differential oil from foaming over, make sure that no remnants of the liquid gasket are pressed into the rear differential housing.

Release screw (1).

Tightening torque (M10x75): 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Unscrew screws (2).

Tightening torque (M10x25): 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER** .

Remove cover.

If necessary, remove remnants of liquid gasket with scraper.

Clean sealing face on cover and rear differential.

Installation:

If a paper gasket was fitted, a paper or liquid gasket can be used.

The liquid gasket can be found in Main Group 33 in the Electronic Parts Catalogue.

Fig. 21: Rear Differential Cover Screw (215K)
Courtesy of BMW OF NORTH AMERICA, INC.

33 11 021 REPLACING SHAFT SEAL FOR INPUT FLANGE ON FINAL DRIVE

Special tools required:

- **00 5 010 UNIVERSAL PULLER**
- **00 5 500 HANDLE FOR DRIFTS**
- **23 0 020 HOLDER**
- **23 1 300 FIXTURE**
- 23 1 302 **23 1 300 FIXTURE**
- 23 1 303 **23 1 300 FIXTURE**
- 31 2 101 **31 2 100 FIXTURE**
- 31 2 102 **31 2 100 FIXTURE**
- 31 2 103 **31 2 100 FIXTURE**
- 31 2 104 **31 2 100 FIXTURE**
- **33 1 150 FIXTURE**
- 33 1 341 **33 1 340 FIXTURE**
- **33 3 390 DRIFT**
- **33 3 440 DRIFT**
- **33 3 470 DRIFT**
- **33 3 480 DRIFT**
- **33 3 490 DRIFT**

IMPORTANT: Use only approved gear oils.

Failure to comply with this instruction will result in serious damage to the rear differential!

Necessary preliminary tasks:

- Remove propeller shaft from rear differential and tie back, see **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .

Removing drive flange:

Support rear axle carrier at front middle with workshop jack.

Release nuts and remove compression strut.

Installation:

Replace self-locking nuts.

Tightening torque: 33 33 3AZ, see **33 33 REAR AXLE SUSPENSION** .

Fig. 22: Locating Compression Strut And Nut
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Before releasing collar nut, mark drive flange (3) and collar nut (2) to drive shaft (3) with center punch or colour marker pen.

Fig. 23: Drive Flange, Collar Nut And Drive Shaft

Courtesy of BMW OF NORTH AMERICA, INC.

Brace drive flange with special tool 23 0 020 and release collar nut.

Fig. 24: Special Tool (23 0 020)

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Read and comply with document "Rear differential: Assignment to model series", see 33 10 ... Rear differential: Assignment to model series.

210 with lock, 215K:

Remove drive flange with special tools 31 2 101 , 31 2 102 , 31 2 103 / 31 2 104 .

Fig. 25: Special Tool (31 2 101), (31 2 102) And (31 2 103)

Courtesy of BMW OF NORTH AMERICA, INC.

168K/L, 188K/L:

Remove drive flange with special tool 33 1 150 .

Fig. 26: Locating Special Tool (33 1 150)
Courtesy of BMW OF NORTH AMERICA, INC.

Replacing shaft seal:

Withdraw shaft seal with special tool 00 5 010 .

Fig. 27: Special Tool (00 5 010)
Courtesy of BMW OF NORTH AMERICA, INC.

Drive in new shaft seal with following special tools (depending on rear differential) as far as it will go.

- 168K/L: Use special tools 00 5 500 and 33 3 390
- 188K/L: Use special tools 00 5 500 and 33 3 470
- 210 with lock, 215K: Use special tools 00 5 500 and 33 3 440

Fig. 28: Special Tool (00 5 500), (33 3 390) And (33 3 440)
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Clean end face (1) of drive flange and apply a thin coating of grease.

NOTE: Failure to comply with this instruction will result in the generation of noise in the rear differential.

Fig. 29: End Face Of Drive Flange
 Courtesy of BMW OF NORTH AMERICA, INC.

Installing drive flange:

Coat sealing lips of shaft seal and sealing surface of drive flange with differential oil.

Attach drive flange as per marking.

Press on drive flange with special tools 23 1 300 , 33 1 341 and 23 1 303 , if necessary 23 1 302 until collar nut can be screwed on.

Fig. 30: Special Tool (23 1 303), (23 1 302) And (23 1 300)
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Do not under any circumstances tighten down collar nut beyond marker points in order to avoid damaging the clamping sleeve.

Tighten down collar nut (1) to point where marker points are aligned.

Fig. 31: Collar Nut
 Courtesy of BMW OF NORTH AMERICA, INC.

Drive in new retaining plate with following special tools (depending on rear differential) as far as it will go.

- 168K/L, 188K/L: Use special tools 00 5 500 and 33 3 480
- 210 with lock, 215K: Use special tools 00 5 500 and 33 3 490

Fig. 32: Special Tool (00 5 500), (33 3 480) And (33 3 490)
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Differentials 168K up to 03/2003, 188K, 210 with lock only: Change rear differential oil, see **00 11 259 Oil change in rear differential incl. used oil disposal.**
- Differentials 168K from 03/2003, 168L to 188L only: Correct rear differential fluid level, see **00 11 ... Checking/topping up oil level in rear differential.**

33 11 080 REPLACING LEFT DRIVE FLANGE ON REAR DIFFERENTIAL

WARNING: Risk of burning on the exhaust system!

IMPORTANT: When replacing the drive flange, you must also replace the shaft seal! See 33 11 140 Replacing shaft seal for left drive flange.

Necessary preliminary tasks:

- Remove output shaft from rear differential and tie back, see **33 21 001 Removing and installing / replacing left output shaft.**

Drive out drive flange.

Installation:

Insert drive flange and rotate until spline on flange meshes with teeth on differential bevel gear.

Press drive flange in further until circlip locates with an audible click.

IMPORTANT: High installation forces indicate that the spline teeth on the drive flange/differential bevel gear are damaged/deformed!

Check spline teeth, replaced damaged parts.

Fig. 33: Drive Flange

Courtesy of BMW OF NORTH AMERICA, INC.

Install retaining ring (1).

Installation:

Clean shaft seal race on drive flange thoroughly.

Coat drive flange at contact face of shaft seal with approved rear differential oil.

Fig. 34: Retaining Ring

Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

Replace shaft seal, see **33 11 140 Replacing shaft seal for left drive flange.**

After installation:

- Correct gearbox oil level/change differential oil, see 00 11 ... Checking/topping up oil level in rear differential.

33 11 085 REPLACING RIGHT DRIVE FLANGE ON REAR DIFFERENTIAL

The procedure is described in the document "Replacing left drive flange on rear differential", see 33 11 080 Replacing left drive flange on rear differential.

33 11 140 REPLACING SHAFT SEAL FOR LEFT DRIVE FLANGE

Special tools required:

- 00 5 010 UNIVERSAL PULLER
- 00 5 500 HANDLE FOR DRIFTS
- 32 1 060 DRIFT
- 33 1 308 33 1 300 RILLEX TAPERED ROLLER BEARING EXTRACTOR
- 33 3 400 DRIFT
- 33 4 240 DRIFT
- 33 4 250 DRIFT

Necessary preliminary tasks:

- Remove drive flange from rear differential, see 33 11 080 Replacing left drive flange on rear differential.
 - If necessary, press off dust cover

Withdraw shaft seal with special tools 00 5 010 and 32 1 060 / 33 1 308 .

Fig. 35: Special Tool (32 1 060), (33 1 308) And (00 5 010)
Courtesy of BMW OF NORTH AMERICA, INC.

Coat housing plate flange and sealing lips of new shaft seal with approved rear differential oil.

Drive in new shaft seal as far as it will go with following special tools (depending on rear differential /outside diameter).

00 5 500 + 33 3 400 : 168K - 78x44x10

00 5 500 + 33 4 240 : 188K/L - 90x44x10

00 5 500 + 33 4 250 : 215L - 100x50x10

Fig. 36: Special Tool (33 3 400), (33 4 240) And (33 4 250)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check rear differential oil level, correct if necessary, see **00 11 ... Checking/topping up oil level in rear differential.**

33 11 145 REPLACING SHAFT SEAL FOR RIGHT DRIVE FLANGE

The procedure is described in the document "Replacing shaft seal for left drive flange", see **33 11 140 Replacing shaft seal for left drive flange.**

33 11 271 REPLACING REAR COVER GASKET ON REAR DIFFERENTIAL

IMPORTANT: In event of oil loss, always check rear differential for traces of wear and damage.

Necessary preliminary tasks:

- Drain and catch or draw off rear differential oil, see **00 11 259 Oil change in rear differential incl. used oil disposal.**
- Remove stabilizer from rear axle carrier, see **33 55 000 Removing and installing/replacing rear stabilizer.**
- Lower rear differential; if necessary, press to one side (do not remove output shafts), see **33 10 010**

Removing and installing/replacing rear differential.

NOTE: Read and comply with document "Rear differential: Assignment to model series".

Select rear differential:

- 168K
- 188K
- 188L
- 215K

After installation:

- Add rear differential oil.

33 11 271 REPLACING COVER GASKET ON REAR DIFFERENTIAL (235L)

IMPORTANT: In event of oil loss, always check rear differential for traces of wear and damage. To avoid leaks from the rear differential cover, do not use a paper gasket in cars with liquid sealing compounds! To prevent the differential oil from foaming over, make sure that no traces of the liquid gasket are pressed into the housing.

Necessary preliminary tasks:

- Drain and catch rear differential oil
- Remove rear axle final drive

Release screw (1). Tightening torque (M10x50) 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER**. Unfasten screws (2). Tightening torque (M10x25) 33 11 1AZ, see **33 11 REAR DIFFERENTIAL CASE WITH COVER**. Remove cover. If necessary, remove remnants of liquid sealing compound with scraper. Clean sealing face on cover and rear differential.

Fig. 37: Identifying Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Installation note: If a paper gasket was fitted, a paper gasket or liquid sealing compound can be used.

After installation: Add rear differential oil

17 FINAL DRIVE MOUNTING

33 17 004 REPLACING ALL RUBBER MOUNTS FOR DIFFERENTIAL MOUNTING AT FRONT

Special tools required:

- 33 3 314 **33 3 310 REMOVAL/INSTALLATION TOOL KIT**
- 33 3 315 **33 3 310 REMOVAL/INSTALLATION TOOL KIT**
- 33 3 361 **33 3 360 SET OF TOOLS**
- 33 3 362 **33 3 360 SET OF TOOLS**
- 33 4 173 **33 4 170 REMOVAL/INSTALLATION THRUST PIECES**

Necessary preliminary tasks:

- Remove rear differential, see **33 10 010 Removing and installing/replacing rear differential.**

Pull out rubber mount with special tools 33 3 314 , 33 3 315 , 33 3 361 , 33 3 362 and a standard nut (1) from rear axle carrier.

Fig. 38: Special Tool (33 3 361), (33 3 315) And (33 3 314)
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Observe installation position of rubber mount.
 Fig. A = Protrusion (A) in direction of travel, rear
 Fig. B = Openings (1) in transverse vehicle direction

Coat new rubber mount and bearing bush with Circo Light.

Fig. 39: Direction Of Travel And Transverse Vehicle Direction
 Courtesy of BMW OF NORTH AMERICA, INC.

Draw in rubber mount (1) with special tools 33 3 314 , 33 3 315 , 33 3 362 and 33 4 173 as far as it will go into rear axle carrier.

Fig. 40: Special Tool (33 4 173), (33 3 315) And (33 3 362)
 Courtesy of BMW OF NORTH AMERICA, INC.

33 17 005 REPLACING RUBBER MOUNT FOR REAR DIFFERENTIAL MOUNTING AT REAR

Necessary preliminary tasks:

- Remove rear differential, see **33 10 010 Removing and installing/replacing rear differential.**

IMPORTANT: Risk of damage!

When replacing rubber mount (B) with rubber mount (A), fit a spacer between rear differential and rubber mount.

Rubber mount (A) must not be replaced by rubber mount (B).

A = Remove rubber mount

B = Remove rubber mount (with hydraulic damping)

Fig. 41: Rubber Mount
 Courtesy of BMW OF NORTH AMERICA, INC.

21 OUTPUT SHAFTS

33 21 ... PRESSING OUTPUT SHAFT OUT OF DRIVE FLANGE AND DRAWING IN (OUTPUT SHAFT REMOVED FROM REAR DIFFERENTIAL)

Special tools required:

- 33 2 111 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 115 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 116 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 117 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 118 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 119 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 160 SPACER RING
- 33 2 201 33 2 200 FIXTURE
- 33 2 202 33 2 200 FIXTURE
- 33 2 203 33 2 200 FIXTURE
- 33 2 205 33 2 200 FIXTURE
- 33 2 206 33 2 200 FIXTURE
- 33 2 207 33 2 200 FIXTURE
- 33 5 070 EXTENSION PIECE (2)

WARNING: Risk of injury!

It is not permitted to use the impact screwdriver to press out and draw in the output shaft.

IMPORTANT: Risk of damage!

To avoid damaging the output shaft and adjoining parts, it is essential during the pressing-out process to repeatedly check and if necessary correct the position of the output shaft.

IMPORTANT: To avoid damaging the dust sleeve, use special tool 33 2 160 to press out and draw in the output shaft after removing the brake disk.

NOTE: Rounded inside edge of special tool 33 2 160 must point to drive flange.

Fig. 42: Special Tool (33 2 160)

Courtesy of BMW OF NORTH AMERICA, INC.

Special tool 33 2 200:

Secure output shaft against falling out.

Screw on special tool 33 2 203 , 33 2 207 and 33 2 201 with all wheel studs to drive flange.

Press output shaft out of drive flange; in so doing, grip basic body 33 2 201 with special tools 33 2 202 and 33 5 070 .

Fig. 43: Special Tool (33 2 201), (33 2 203) And (33 2 202)

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: No oil permitted on shaft journal thread!

Lightly oil spline teeth of output shaft.

Insert output shaft into drive flange.

Screw special tool 33 2 205 / 33 2 206 onto output shaft.

Fig. 44: Special Tool (33 2 205) And (33 2 206)
Courtesy of BMW OF NORTH AMERICA, INC.

Mount special tool 33 2 201 with three wheel studs to drive flange.

Draw in output shaft with special tool 33 2 205 up to stop; in so doing, grip basic body 33 2 201 with special tools 33 2 202 and 33 5 070 .

Fig. 45: Special Tool (33 2 201), (33 2 202) And (33 2 205)
Courtesy of BMW OF NORTH AMERICA, INC.

Special tool 33 2 100:

Secure output shaft against falling out.

Screw on special tool 33 2 111 , 33 2 117 and 33 2 116 with all wheel studs to drive flange.

Press output shaft out of drive flange; in so doing, grip basic body 33 2 116 with special tools 33 2 202 and 33 5 070 .

Fig. 46: Special Tool (33 2 116), (33 2 111) And (33 2 202)
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: No oil permitted on shaft journal thread!

Lightly oil spline teeth of output shaft.

Insert output shaft into drive flange.

Screw special tool 33 2 118 / 33 2 119 onto output shaft.

Fig. 47: Special Tool (33 2 118) And (33 2 119)
 Courtesy of BMW OF NORTH AMERICA, INC.

Mount special tool 33 2 116 with three wheel studs to drive flange.

Draw in output shaft with special tool 33 2 115 up to stop; in so doing, grip basic body 33 2 116 with special tools 33 2 202 and 33 5 070 .

Fig. 48: Special Tool (33 2 116), (33 2 115) And (33 2 118)
 Courtesy of BMW OF NORTH AMERICA, INC.

33 21 ... RIBBED TEETH

IMPORTANT: Bolts with ribbed teeth must be replaced after they have been released!

Fig. 49: Ribbed Teeth
 Courtesy of BMW OF NORTH AMERICA, INC.

33 21 001 REMOVING AND INSTALLING / REPLACING LEFT OUTPUT SHAFT

WARNING: Scalding hazard!
Only perform the following tasks after the vehicle has cooled down.

Necessary preliminary tasks:

- Remove entire exhaust system .

The subsequent procedure is described in the document "Removing and installing/replacing right output shaft.",

see **33 21 002 Removing and installing / replacing right output shaft.**

33 21 002 REMOVING AND INSTALLING / REPLACING RIGHT OUTPUT SHAFT

Apply handbrake.

Remove rear wheel, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL .**

Unscrew collar nut.

Installation:

Replace collar nut, apply a light coating of oil to contact surface and tighten down.

Tightening torque: 33 41 3AZ, see **34 41 PARKING BRAKE .**

Secure collar nut by peening on flat areas of output shaft.

Fig. 50: Locating Right Output Shaft

Courtesy of BMW OF NORTH AMERICA, INC.

Remove stabilizer on rear axle carrier, see **33 55 000 Removing and installing/replacing rear stabilizer.**

Release bolts and remove with washers (1).

Press output shaft off drive flange using a suitable tool; if necessary, raise trailing arm with workshop jack approx. 20 mm.

Installation:

Before installing output shaft, make sure that drive flange is fully engaged in rear differential.

Replace bolts and washers (1).

Tightening torque: 33 21 1AZ, see **33 21 OUTPUT SHAFT** .

Fig. 51: Locating Bolt With Washer

Courtesy of BMW OF NORTH AMERICA, INC.

Press output shaft out of drive flange and remove towards center of vehicle, see **33 21 ... Pressing output shaft out of drive flange and drawing in (output shaft removed from rear differential)**.

After installation:

- Check that output shaft is correctly seated in rear differential.

33 21 035 REPLACING GAITER ON LEFT OUTPUT SHAFT

Special tools required:

- **21 2 120 DRIFT**
- **26 1 110 REMOVAL DISK**
- **33 2 100 CLAMPING FIXTURE**

Necessary preliminary tasks:

- Remove output shaft, see **33 21 001 Removing and installing / replacing left output shaft**.

Clean output shaft.

Press off sealing cap (1).

Installation:

Press on sealing cap with a thrust ring

Coat sealing faces of sealing cap with sealing compound.

Fig. 52: Pressing Sealing Cap
 Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten hose clip (2).

Press cap (3) off together with gaiter.

Remove circlip (4).

Installation:

Turn new gaiter with cap (3) so that fastener of large hose clamp is between two bores of constant-velocity joint.

Fig. 53: Cap, Circlip And Hose Clip
 Courtesy of BMW OF NORTH AMERICA, INC.

Special tool 26 1 110 must be used in accordance with diameter of output shaft. Bearing inner race must rest on rib of special tool.

Hollow shaft only: Also use special tool 21 2 120 .

Press splined shaft out of constant-velocity joint.

Clean constant-velocity joint carefully and remove all traces of old grease.

Check constant-velocity joint for damage, replace if necessary.

Detach gaiter from splined shaft.

Fig. 54: Special Tool (21 2 120) And (26 1 110)
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Pull gaiter onto cap (3).

Coat sealing surface of cap (3) with sealing compound and press with a thrust ring onto constant - velocity joint.

Fill constant-velocity joint with high-temperature grease.

Install new circlip.

Press constant-velocity joint and cap (3) over inner bearing race on splined shaft.

Mount special tool 33 2 100 with corresponding insert.

Push new gaiter onto splined shaft.

Fig. 55: Gaiter Onto Cap With Special Tool (33 2 100)
Courtesy of BMW OF NORTH AMERICA, INC.

Release hose clamps (5, 6).

Detach gaiter from splined shaft.

Clean joint carefully and remove all traces of old grease.

Installation:

Pull new gaiter on.

Thoroughly clean joint while assembled and remove old grease completely.

Fig. 56: Hose Clamps
Courtesy of BMW OF NORTH AMERICA, INC.

Disassembling/assembling constant-velocity joint:

NOTE: Mark positions of ball hub, ball cage and joint with respect to each other with electric inscriber.

Ensure all parts are clean prior to assembly.

Fig. 57: Mark Positions Of Ball Hub

Courtesy of BMW OF NORTH AMERICA, INC.

33 21 035 REPLACING GAITER ON LEFT OUTPUT SHAFT (ALTERED SEALING COVER)

Special tools required:

- **21 2 120 DRIFT**
- **26 1 110 REMOVAL DISK**
- **33 2 100 CLAMPING FIXTURE**

Necessary preliminary tasks:

- Remove output shaft, see **33 21 001 Removing and installing / replacing left output shaft.**

Removing inner gaiter:

Clean output shaft and clamp with a cloth in vice.

Unfasten hose clip (1).

Using a suitable tool, force gaiter cap (2) off joint or sealing cover.

Fig. 58: Hose Clip And Gaiter Cap

Courtesy of BMW OF NORTH AMERICA, INC.

Push back gaiter with cap.

IMPORTANT: Risk of damage!
Make sure that joint does not fall apart.

Clamp joint (1) in vice.

Using a suitable tool, force sealing cover (2) off joint (1).

Fig. 59: Sealing Cover Off Joint

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Mark positions in relation to each other of ball hub, ball cage and joint at ends.

NOTE: If the joint falls apart, it can only be reassembled correctly with the aid of the markings.

Fig. 60: Mark Positions Of Ball Hub
Courtesy of BMW OF NORTH AMERICA, INC.

Remove circlip (1).

Fig. 61: Circlip
Courtesy of BMW OF NORTH AMERICA, INC.

Grip output shaft.

Using special tool 26 1 110 and a suitable tool (for hollow shaft 21 2 120), press output shaft out of joint (1).

Clean joint (1) carefully.

NOTE: All traces off old grease must be removed.

Detach gaiter from output shaft.

Fig. 62: Special Tool (21 2 120) And (26 1 110)
Courtesy of BMW OF NORTH AMERICA, INC.

Removing and installing outer gaiter:

Release hose clamps (1, 3) and detach gaiter (2) from output shaft.

Clean joint and output shaft carefully.

NOTE: All traces off old grease must be removed.

Check joint for damage; if necessary, replace output shaft .

Fill joint with propeller shaft grease.

Fit gaiter (2) on bellows and secure with hose clamps (1, 3).

Fig. 63: Hose Clamps, Gaiter From Output Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Installing inner gaiter:

Push gaiter with cap onto output shaft (1).

Mount special tool 33 2 100 with corresponding shell inserts on output shaft (1).

Press joint (2) over bearing inner race onto output shaft.

Fig. 64: Output Shaft With Special Tool (33 2 100)
Courtesy of BMW OF NORTH AMERICA, INC.

Install new circlip (1).

Fig. 65: Circlip
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Keep sealing faces of cap and joint (on both sides) clean and free from grease.

Fill joint at both ends with high-temperature grease.

Fig. 66: Sealing Faces Of Cap And Joint
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Risk of damage!

Do not install gaiter with cap and sealing cover on joint without shims.

Apply a thin coating of sealing compound to sealing faces of sealing cover and cap.

Install sealing cover (1) with two bolts, shims and nuts on joint.

Fig. 67: Sealing Cover
Courtesy of BMW OF NORTH AMERICA, INC.

Install cap (1) with two bolts, shims and nuts on joint.

Fit hose clamp (2).

Fig. 68: Hose Clamp And Cap

Courtesy of BMW OF NORTH AMERICA, INC.

33 21 036 REPLACING GAITER ON RIGHT OUTPUT SHAFT

Procedure is described in the document "Replacing gaiter on left output shaft", see **33 21 035 Replacing gaiter on left output shaft**.

31 REAR SUB-FRAME

33 31 ... OVERVIEW OF REAR AXLE CARRIER WITH RUBBER MOUNTS

- | | | | |
|---|--|---|---|
| 1 | Rear axle carrier | 4 | Rear axle carrier rubber mount. front |
| 2 | Rear axle carrier rubber mount. rear | 5 | Rear differential rubber mount. front |
| 3 | Rear differential rubber mount. rear | | |

Fig. 69: Rear Axle Carrier With Rubber Mounts Components
 Courtesy of BMW OF NORTH AMERICA, INC.

33 31 000 REMOVING AND INSTALLING COMPLETE REAR AXLE CARRIER

Special tools required:

- **33 4 420 SUPPORT**

Necessary preliminary tasks:

- Remove emergency wheel pan, see **51 71 495 REMOVING AND INSTALLING/REPLACING EMERGENCY WHEEL PAN** .
- Remove propeller shaft from rear differential and tie back, see **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .
- Disengage handbrake Bowden cables from handbrake lever and expose up to rear axle carrier, see **34 41 120 REMOVING AND INSTALLING/REPLACING BOTH HANDBRAKE BOWDEN CABLES** .
- Remove coil springs, see **33 53 000 Removing and installing / replacing rear left or right coil spring**.
- If necessary, disconnect plug connection from ride-height sensor
- Remove lip on both sides

- Disconnect plug connection for pulse generator on both sides
- Disconnect plug connection for right brake pad wear sensor.

IMPORTANT: Risk of damage!

Brake hose must not be exposed to tensile loads.

Release screw and remove bracket with brake hose.

Tightening torque: 34 32 3AZ, see **34 32 BRAKE LINES** .

Fig. 70: Locating Bracket With Brake Hose

Courtesy of BMW OF NORTH AMERICA, INC.

Disconnect plug connection for right brake pad wear sensor on brake caliper.

Remove brake caliper on both sides of trailing arm and tie back, see **34 21 745 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT REAR BRAKE CALIPER** .

Remove lower control arm on both sides from trailing arm **33 32 086 Removing and installing/replacing bottom left control arm.**

Slide brake caliper through between output shaft and lower control arm and tie up.

Remove bearing block for trailing arm from body **33 32 ... Replacing bearing block for front trailing arm.**

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Support rear differential with workshop jack and special tool 33 4 420 .

**IMPORTANT: Observe gap between special tool 33 4 420 and dust plates (1).
To avoid grinding noises, make sure the dust plates (1) are not damaged (e.g. bent).**

Remove tension strut, see 33 32 160 Removing and installing/replacing compression strut for rear axle carrier.

Fig. 71: Dust Plates With Special Tool (33 4 420)
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1) and remove stop plate.

Lower rear axle carrier.

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see 33 00 ... Notes on repairing threads.

Tightening torque: 33 33 3AZ, see 33 33 REAR AXLE SUSPENSION .

Fig. 72: Stop Plate And Screw

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Adjust handbrake, see **34 10 014 ADJUSTING HANDBRAKE** .
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 31 011 REPLACING REAR AXLE CARRIER

Necessary preliminary tasks:

- Remove rear differential, see **33 10 010 Removing and installing/replacing rear differential**.
- Remove complete rear axle carrier, see **33 31 000 Removing and installing complete rear axle carrier**.

Disengage handbrake Bowden cables from expander lock and feed out of rear axle carrier, see **34 41 120 REMOVING AND INSTALLING/REPLACING BOTH HANDBRAKE BOWDEN CABLES** .

Remove stabilizer bar, see **33 55 000 Removing and installing/replacing rear stabilizer**.

Remove lower control arm from rear axle carrier, see **33 32 086 Removing and installing/replacing bottom left control arm**.

Remove upper control arm on both sides from rear axle carrier and remove with trailing arm and output shaft.

If necessary, remove height setting sensor and bracket, see **37 14 512 REPLACING REAR RIDE-HEIGHT SENSOR** .

If necessary, remove vibration damper.

Fig. 73: Rear Axle Carrier

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Adjust handbrake, see **34 10 014 ADJUSTING HANDBRAKE** .
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 31 503 LOWERING/RAISING REAR AXLE CARRIER

Special tools required:

- **33 4 420 SUPPORT**

NOTE: If the rear axle carrier is detached from the body, it is necessary after reinstallation to carry out a wheel/chassis alignment check.

Necessary preliminary tasks:

- Remove emergency wheel pan, see **51 71 495 REMOVING AND INSTALLING/REPLACING EMERGENCY WHEEL PAN** .
- Remove exhaust system up to catalytic converter, see **EXHAUST SYSTEM COMPLETE** .
- Remove tunnel thermal insulation
- Remove center mount from body and release screw ring, see **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .
- Unclip both handbrake Bowden cables in tunnel
- If necessary, disconnect plug connection from ride-height sensor

IMPORTANT: Risk of damage!

Brake hose must not be exposed to tensile loads.

Release screw and remove bracket with brake hose.

Tightening torque: 34 32 3AZ, see **34 32 BRAKE LINES** .

Fig. 74: Locating Bracket With Brake Hose
Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Support rear differential with workshop jack and special tool 33 4 420 .

IMPORTANT: Observe gap between special tool 33 4 420 and dust plates (1).

To avoid grinding noises, make sure the dust plates (1) are not damaged (e.g. bent).

Remove tension strut, see **33 32 160 Removing and installing/replacing compression strut for rear axle carrier**.

Fig. 75: Dust Plates With Special Tool (33 4 420)
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1) and remove stop plate.

Lower rear axle carrier.

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see **33 00 ... Notes on repairing threads.**

Check seating of coil springs with spring pads, correct if necessary.

Tightening torque: 33 33 3AZ, see **33 33 REAR AXLE SUSPENSION** .

Fig. 76: Stop Plate And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

32 CONTROL ARMS AND STRUTS

33 32 .. OVERVIEW OF CONTROL ARMS WITH RUBBER MOUNTS

- | | | | |
|---|--|---|---|
| 1 | Rubber mount in control arm, top | 6 | Rubber mount in trailing arm at front |
| 2 | Control arm, top (left/right) | 7 | Control arm, bottom (left/right) |
| 3 | Ball joint in trailing arm | 8 | Rubber mount in control arm, bottom |
| 4 | Rubber mount in trailing arm | 9 | Adjustment work |
| 5 | Trailing arm (left/right) | | |

Fig. 77: Control Arms With Rubber Mounts Components
 Courtesy of BMW OF NORTH AMERICA, INC.

33 32 ... REPLACING BEARING BLOCK FOR FRONT TRAILING ARM

Special tools required:

- **33 3 280 SETTING GAUGE**

Necessary preliminary tasks:

- Remove rear wheel, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- Disconnect plug connection for pulse generator; if necessary, expose lead up to trailing arm, see **34 52 535 REPLACING A REAR PULSE GENERATOR** .
- Only on right side: Disconnect plug connection for brake pad sensor; if necessary, expose lead up to trailing arm

IMPORTANT: Risk of damage!
Brake hose must not be exposed to tensile loads.

Release screw and remove bracket with brake hose.

Tightening torque: 34 32 3AZ, see **34 32 BRAKE LINES** .

Fig. 78: Locating Bracket With Brake Hose
Courtesy of BMW OF NORTH AMERICA, INC.

Mark position of bearing block (1) to body (2) with colored mark (3); this simplifies subsequent toe-in adjustment.

Unfasten screws.

Tightening torque: 33 32 13AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Lower workshop jack and pull trailing arm downwards.

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see **33 00 ... Notes on repairing threads**.

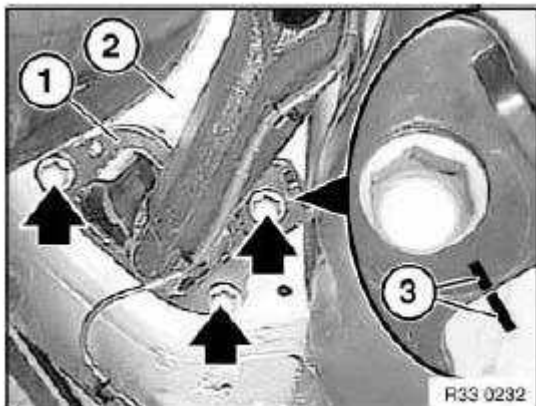

Fig. 79: Locating Mark Position Of Bearing Block To Body With Colored Mark

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten nut.

Pull out screw.

Remove bearing block towards top.

Installation:

Replace self-locking nut.

Tightening torque: 33 32 12AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 80: Pulling Screw

Courtesy of BMW OF NORTH AMERICA, INC.

Installation with special tool:

Installation:

Secure special tool 33 3 280 to bearing pedestal with a screw and align to wheel center. Place bearing block in position and screw down.

Tightening torque: 33 32 12AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 81: Locating Special Tool (33 3 280)
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation without special tool:

Installation:

Place tube (1) (length = approx. 500 mm, dia. = 16 mm) flat on bearing block, secure with screw clamp and align tube center to wheel center. Screw bearing pedestal down in this position.

Tightening torque: 33 32 12AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 82: Locating Tube
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

Special tools required:

- **31 5 220 SUPPORT**
- **33 2 160 SPACER RING**

Necessary preliminary tasks:

- Remove output shaft, see **33 21 001 Removing and installing / replacing left output shaft.**
- Remove brake disk, see **34 21 320 REMOVING AND INSTALLING/REPLACING BOTH BRAKE DISKS .**
- Disconnect handbrake Bowden cable from expander lock, see **34 41 120 REMOVING AND INSTALLING/REPLACING BOTH HANDBRAKE BOWDEN CABLES .**
- Remove pulse generator, see **34 52 535 REPLACING A REAR PULSE GENERATOR .**
- Only on right side: remove brake pad sensor

IMPORTANT: Risk of damage

Brake hose must not be exposed to tensile loads.

Release screw and remove bracket with brake hose.

Tightening torque: 34 32 3AZ, see **34 32 BRAKE LINES .**

Fig. 83: Locating Bracket With Brake Hose

Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons. When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Secure special tools 31 5 220 and 33 2 160 with wheel studs to drive flange.

Support trailing arm with special tool 31 5 220 and workshop jack.

Remove bearing block from body, see **33 32 ... Replacing bearing block for front trailing arm.**

Remove lower control arm from trailing arm, see **33 32 071 Replacing one upper control arm.**

Remove upper control arm from trailing arm, see **33 32 071 Replacing one upper control arm.**

Fig. 84: Special Tool (33 2 160) And (31 5 220)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Adjust handbrake, see **34 10 014 ADJUSTING HANDBRAKE .**
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 021 REPLACING LEFT OR RIGHT TRAILING ARM

Necessary preliminary tasks:

- Remove trailing arm, see **33 32 000 Removing and installing complete left or right trailing arm.**
- Remove brake carrier/brake guard plate, see **34 21 171 REMOVING AND INSTALLING/REPLACING A BRAKE CARRIER/BRAKE GUARD PLATE AT REAR .**

Installation:

Install new wheel bearing, see **33 41 153 Replacing left wheel bearing on rear axle shaft.**

Detach wheel bearing inner race from drive flange.

Fig. 85: Wheel Bearing Inner Race From Drive Flange
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Adjust handbrake, see **34 10 014 ADJUSTING HANDBRAKE** .
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 042 REPLACING A RUBBER MOUNT IN TRAILING ARM, FRONT

Special tools required:

- 33 3 144**33 3 140 SET OF TOOLS**
- 33 3 145**33 3 140 SET OF TOOLS**
- 33 3 222**33 3 220 SET OF TOOLS**
- 33 3 227**33 3 220 SET OF TOOLS**
- 33 3 228**33 3 220 SET OF TOOLS**

Necessary preliminary tasks:

- Remove bearing block, see **33 32 ... Replacing bearing block for front trailing arm.**

IMPORTANT: The arrow on special tool 33 3 228 must point in the pullout direction!

Pull out rubber mount with special tools 33 3 144 , 33 3 145 , 33 3 222 , 33 3 227 , 33 3 228 and nut (1).

Fig. 86: Special Tool (33 3 228), (33 3 222) And (33 3 144)
Courtesy of BMW OF NORTH AMERICA, INC.

Mark trailing arm eye with a colored dot (K) as shown in illustration on left.

Fig. 87: Mark Trailing Arm Eye With Colored Dot
Courtesy of BMW OF NORTH AMERICA, INC.

Keep rubber mount and trailing arm eye clean and free from oil and grease.

IMPORTANT: Slot in rubber mount must match up with end of arrow on special tool 33 3 228 !

Insert rubber mount in special tool 33 3 228 and align.

Fig. 88: Special Tool (33 3 228)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Arrow on special tool 33 3 228 must point to colored dot (K)!

Draw in rubber mount with special tools 33 3 144 , 33 3 145 , 33 3 222 , 33 3 227 , 33 3 228 and nut (1) until special tool 33 3 228 becomes loose.

Fig. 89: Special Tool (33 3 227), (33 3 144) And (33 3 222)
Courtesy of BMW OF NORTH AMERICA, INC.

Draw in rubber mount to distance (A) = 2.5 mm.

Fig. 90: Rubber Mount To Distance

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check that output shaft is correctly seated in rear differential.
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 044 REPLACING ONE RUBBER MOUNT/BALL JOINT IN TRAILING ARM FOR LOWER CONTROL ARM

Special tools required:

- 33 3 331 **33 3 330 REMOVAL AND INSTALLATION TOOL**
- 33 3 332**33 3 330 REMOVAL AND INSTALLATION TOOL**
- 33 3 333**33 3 330 REMOVAL AND INSTALLATION TOOL**
- 33 3 334**33 3 330 REMOVAL AND INSTALLATION TOOL**

NOTE: **S54: A ball joint is fitted instead of the rubber mount.**

Necessary preliminary tasks:

- Remove lower control arm from trailing arm, see **33 32 071 Replacing one upper control arm.**

Measure and note protrusion (A) of old rubber mount.

Fig. 91: Protrusion Of Rubber Mount
Courtesy of BMW OF NORTH AMERICA, INC.

Pull out rubber mount with special tools 33 3 331 , 33 3 332 , 33 3 333 and nut (1).

Fig. 92: Special Tool (33 3 331), (33 3 333) And (33 332)
Courtesy of BMW OF NORTH AMERICA, INC.

Draw in new rubber mount (1) with special tools 33 3 332 , 33 3 333 and 33 3 334 to previously determined protrusion (A).

Fig. 93: Special Tool (33 3 332), (33 3 333) And (33 334)
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check that output shaft is correctly seated in rear differential.
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 047 REPLACING A BALL JOINT IN TRAILING ARM FOR UPPER CONTROL ARM

Special tools required:

- 33 3 331 **33 3 330 REMOVAL AND INSTALLATION TOOL**
- 33 3 332 **33 3 330 REMOVAL AND INSTALLATION TOOL**
- 33 3 333 **33 3 330 REMOVAL AND INSTALLATION TOOL**
- 33 3 334 **33 3 330 REMOVAL AND INSTALLATION TOOL**

Necessary preliminary tasks:

- Remove coil spring, see **33 53 000 Removing and installing / replacing rear left or right coil spring.**
- Remove upper control arm from trailing arm, see **33 32 071 Replacing one upper control arm.**

Measure and note down protrusion (A) of old ball joint.

36 33 114

Fig. 94: Down Protrusion Distance Of Ball Joint
 Courtesy of BMW OF NORTH AMERICA, INC.

Pull out ball joint with special tools 33 3 331 , 33 3 332 and 33 3 333 .

36 33 118

Fig. 95: Special Tool (33 3 332), (33 3 331) And (33 3 333)
 Courtesy of BMW OF NORTH AMERICA, INC.

Keep trailing arm eye and ball joint (1) clean and free from oil and grease.

Draw in new ball joint (1) with special tools 33 3 332 , 33 3 333 and 33 3 334 to previously determined protrusion (A).

36 33 119

Fig. 96: Special Tool (33 3 332), (33 3 334) And (33 3 333)

Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 071 REPLACING ONE UPPER CONTROL ARM

NOTE: If the upper control arm is detached from the rear axle carrier/trailing arm, it is necessary after reinstallation to carry out a wheel/chassis alignment check.

Necessary preliminary tasks:

- Remove coil spring, see **33 53 000 Removing and installing / replacing rear left or right coil spring.**
- Remove stabilizer link from upper control arm, see **33 55 040 Replacing stabilizer links for stabilizer.**
- If necessary, remove jointed rod of ride-height sensor from upper control arm
- Support rear differential and remove from rear axle carrier, see **33 10 010 Removing and installing/replacing rear differential.**

Unfasten nut.

Remove screw towards rear.

Installation:

Observe bolt insertion direction (F = direction of travel).

Replace self-locking nut.

Tightening torque: 33 32 24AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 97: Locating Self-Locking Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten nut.

Remove bolt (1) towards rear.

Remove upper control arm (2) sideways.

Installation:

Note insertion direction of screw.

Replace self-locking nut.

Tighten bolt in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Tightening torque: 33 32 14AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 98: Locating Upper Control Arm And Bolt
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check that output shaft is correctly seated in rear differential.
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 086 REMOVING AND INSTALLING/REPLACING BOTTOM LEFT CONTROL ARM

NOTE: If the lower control arm is detached from the rear axle carrier/trailing arm, it is necessary after reinstallation to carry out a wheel/chassis alignment check.

Necessary preliminary tasks:

- Remove rear wheel, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- Remove stabilizer from rear axle carrier, see **33 55 000 Removing and installing/replacing rear**

stabilizer.

- Support rear differential and remove from rear axle carrier, see **33 10 010 Removing and installing/replacing rear differential.**

IMPORTANT: To avoid damaging the output shaft, it will be necessary to support the trailing arm with the workshop jack.

Support trailing arm from underneath using a workshop jack.

Spread cover on lower control arm and pull off.

Installation:

Opening in cover points upwards.

Replace damaged cover.

Fig. 99: Locating Lower Control Arm
Courtesy of BMW OF NORTH AMERICA, INC.

Mark position of eccentric screw (1) to lower control arm with center marks (2).

Replacement only: Carry over marking from old part to new part.

Fig. 100: Mark Position Of Eccentric Screw To Lower Control Arm With Centre Marks
Courtesy of BMW OF NORTH AMERICA, INC.

Release nut (1) and remove eccentric washer (2).

Remove eccentric screw towards front.

Installation:

Note insertion direction of eccentric screw.

Align eccentric screw by means of marking to lower control arm.

Reinstall eccentric washer.

Replace self-locking nut.

Tighten bolt in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Tightening torque: 33 32 25AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 101: Eccentric Washer And Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Release screw and remove thread plate (1) downwards.

Press rear differential to side and remove bolt.

Remove lower control arm at side.

Installation:

Insert thread plate into opening in rear axle carrier.

Tighten bolt in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Tightening torque: 33 32 15AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 102: Removing Thread Plate And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Weld seam of control arm must point upwards.

Fig. 103: Locating Weld Seam Of Control Arm
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check that output shaft is correctly seated in rear differential.
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 087 REMOVING AND INSTALLING/REPLACING BOTTOM RIGHT CONTROL ARM

NOTE: If the lower control arm is detached from the rear axle carrier/trailing arm, it is necessary after reinstallation to carry out a wheel/chassis alignment check.

Necessary preliminary tasks:

- Remove rear wheel, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- Remove output shaft from rear differential and tie back, see **33 21 001 Removing and installing / replacing left output shaft**.

NOTE: The subsequent procedure is described in the document "Removing and installing/replacing lower left control arm." See **33 32 086 Removing and installing/replacing bottom left control arm**.

After installation:

- Check that output shaft is correctly seated in rear differential.
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 160 REMOVING AND INSTALLING/REPLACING COMPRESSION STRUT FOR REAR AXLE CARRIER

IMPORTANT: Observe safety instructions for raising the vehicle, see **00 LIFTING VEHICLE WITH A LIFTING PLATFORM** .
Driving without the compression strut is not permitted!

Necessary preliminary tasks:

- Remove tension struts, see **33 32 160 Removing and installing/replacing compression strut for rear axle carrier**.
- Lower exhaust system in rear area, see **18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM (M54)** .

Release screws (1) and remove heat shield (2).

Tightening torque: 33 32 27AZ, see **33 32 CONTROL ARMS AND STRUTS** .

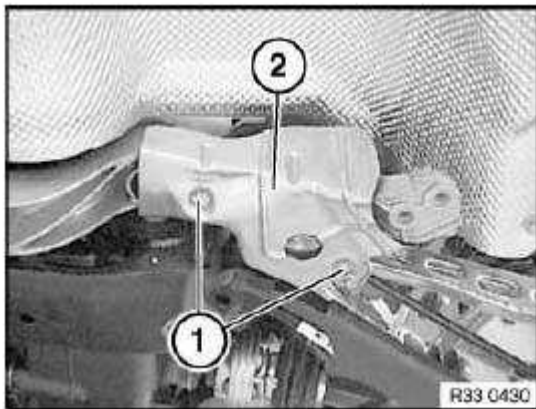

Fig. 104: Heat Shield And Screw

Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons. When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Risk of damage!

Support rear axle carrier in area of dashed line with workshop jack.

Release screw (1), press tunnel thermal insulation downwards a little and release screw (2).

Release screws (4).

Tightening torque: 33 32 17AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Release bolts (3) and remove compression strut (5).

Secure rear axle carrier by inserting bolts (3).

Installation:

Check threads for damage; if necessary, repair with Helicoil thread inserts, see **33 00 ... Notes on repairing threads**.

Fig. 105: Compression Strut, Bolt And Screw
 Courtesy of BMW OF NORTH AMERICA, INC.

Make sure handbrake Bowden cables are correctly positioned.

Tightening torque: 33 33 3AZ, see **33 33 REAR AXLE SUSPENSION** .

Replacement:

Convert both holders for handbrake Bowden cables.

33 32 170 REMOVING AND INSTALLING/REPLACING LEFT OR RIGHT TENSION STRUT

NOTE: **Build date from 07/2006:**
 Thread inserts in compression strut for securing tension strut have been omitted.

IMPORTANT: **Observe safety instructions for raising the vehicle, see 00 LIFTING VEHICLE WITH A LIFTING PLATFORM .**
Driving without tension struts is not permitted!

Release screws (1, 3).

Remove tension strut (2).

Installation:

When replacing compression strut: If necessary, replace threaded screws (3) with self-tapping screws.

Tightening torque: 33 32 26AZ, see **33 32 CONTROL ARMS AND STRUTS** .

Fig. 106: Tension Strut And Screw
 Courtesy of BMW OF NORTH AMERICA, INC.

33 32 525 REPLACING ONE BALL JOINT IN THE SEMITRAILING ARM (SEMI-TRAILING ARM REMOVED)

Special tools required:

- **33 3 331 33 330 REMOVAL AND INSTALLATION TOOL**
- **33 3 332 33 330 REMOVAL AND INSTALLATION TOOL**
- **33 3 333 33 330 REMOVAL AND INSTALLATION TOOL**
- **33 3 334 33 330 REMOVAL AND INSTALLATION TOOL**

Measure and make a note of protrusion (A) of old ball joint.

Fig. 107: Down Protrusion Distance Of Ball Joint
 Courtesy of BMW OF NORTH AMERICA, INC.

Pull out ball joint with special tools 33 3 331 , 33 3 332 and 33 3 333 .

Fig. 108: Special Tool (33 3 332), (33 3 331) And (33 3 333)
Courtesy of BMW OF NORTH AMERICA, INC.

Keep trailing arm eye and ball joint (1) clean and free from oil and grease.

Draw in new ball joint (1) with special tools 33 3 332 , 33 3 333 and 33 3 334 to previously determined protrusion (A).

Fig. 109: Special Tool (33 3 332), (33 3 334) And (33 3 333)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 671 REPLACING ONE RUBBER MOUNT IN THE UPPER CONTROL ARM (CONTROL ARM REMOVED)

Special tools required:

- 33 3 351 **33 3 350 SET OF TOOLS**
- 33 3 352 **33 3 350 SET OF TOOLS**

Press rubber mount with special tools 33 3 351 and 33 3 352 out of upper control arm.

Fig. 110: Special Tool (33 3 352) And (33 3 351)
Courtesy of BMW OF NORTH AMERICA, INC.

Place new rubber mount at chamfered end of control arm bore. Here, longer collar (A = 17 mm) of rubber mount must point upwards.

Press in rubber mount with special tools 33 3 351 and 33 3 352 until flush.

Fig. 111: Special Tool (33 3 352) And (33 3 351)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 32 681 REPLACING ONE RUBBER MOUNT IN LOWER CONTROL ARM (CONTROL ARM REMOVED)

Special tools required:

- 33 3 351 **33 3 350 SET OF TOOLS**
- 33 3 352 **33 3 350 SET OF TOOLS**

- **33 3 353 33 3 350 SET OF TOOLS**
- **33 3 354 33 3 350 SET OF TOOLS**

Attach special tool 33 3 354 between both control arms.

Press rubber mount with special tools 33 3 351 and 33 3 352 out of lower control arm.

Fig. 112: Special Tool (33 3 352), (33 3 354) And (33 3 351)
Courtesy of BMW OF NORTH AMERICA, INC.

Attach special tool 33 3 354 between both control arms.

Press in new rubber mount (1) with special tools 33 3 351 and 33 3 353 .

Fig. 113: Special Tool (33 3 354) And (33 3 351)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 AXLE MOUNTING

33 33 101 REPLACING TWO RUBBER MOUNTS FOR REAR AXLE CARRIER

Special tools required:

- 33 3 314 33 3 310 REMOVAL/INSTALLATION TOOL KIT
- 33 3 315 33 3 310 REMOVAL/INSTALLATION TOOL KIT
- 33 3 371 33 3 370 SET OF TOOLS
- 33 3 372 33 3 370 SET OF TOOLS
- 33 3 373 33 3 370 SET OF TOOLS
- 33 4 140 UNIVERSAL SUPPORT
- 33 4 142 33 4 140 UNIVERSAL SUPPORT
- 33 4 145 33 4 140 UNIVERSAL SUPPORT
- 33 4 147 33 4 140 UNIVERSAL SUPPORT
- 33 4 155 33 4 150 REMOVAL AND INSTALLATION TOOL

WARNING: Danger of explosion!
Do not point air jet from hot air blower at fuel tank!

Necessary preliminary tasks:

- Lower rear axle carrier, see 33 31 503 Lowering/raising rear axle carrier.

Assemble special tool 33 4 140 with 33 4 142 and 33 4 147 .

Fig. 114: Special Tool (33 4 210), (33 4 147) And (33 4 142)
Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew feed handle (1). If necessary, mount extension piece (3) on special tool 33 4 145 with new screw (2).

Fig. 115: Feed Handle, Mount Extension Piece And Screw
 Courtesy of BMW OF NORTH AMERICA, INC.

Position special tools 33 4 140 , 33 4 155 , 33 3 371 , 33 3 372 and nut (1) on openings of rubber mount.

NOTE: Ensure it is correctly supported on bushing of rear axle carrier.

Using a hot air blower, heat bearing bushing at max. 600°C outlet temperature for approx. 2 minutes.

Pull out rubber mount by turning special tool 33 4 155 .

Fig. 116: Special Tool (33 4 140), (33 3 372) And (33 3 371)
 Courtesy of BMW OF NORTH AMERICA, INC.

Coat rubber mount with Circo Light anti-friction agent.

IMPORTANT: Front rubber mounts differ:

Rubber mount VR = front right with elongated hole (1)

Rubber mount VL = front left

When rubber mount is fitted, arrows (2) must point down longitudinal axis of vehicle.

Fig. 117: Elongated Hole And Rubber Mount
 Courtesy of BMW OF NORTH AMERICA, INC.

Draw in rubber mount with special tools 33 3 314 , 33 3 315 , 33 3 372 and 33 3 373 as far as it will go.

Fig. 118: Special Tool (33 3 373), (33 3 372) And (33 3 314)
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check seating of coil spring with spring pads, correct if necessary
- Perform **32 00 150 KDS CHASSIS/WHEEL ALIGNMENT CHECK WITH LOAD UP TO DESIGN POSITION**

33 33 111 REPLACING ALL RUBBER MOUNTS FOR REAR AXLE SUPPORT

Special tools required:

- 33 0 001
- 33 0 002
- 33 0 011

- 33 0 012
- 33 0 051
- 33 0 052
- 33 0 140

IMPORTANT: Before removing rear axle support: In order to avoid damage to the vehicle hoists, perform weight compensation on vehicle. Load luggage compartment with sand bags.

Necessary preliminary tasks:

- Remove **rear axle support** .

Picture shows F01. Press-out and press-in directions pictured.

- Front rubber mount (1) is pulled out and in a downward direction.
- Rear rubber mount (2) is pulled out and in an upward direction.

Fig. 119: Removing Front & Rear Rubber Mounts
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Removal and installation are described on the front rubber mount.

NOTE: Edges (2) break off when rubber mount (1) is pulled out in the direction of arrow.

Fig. 120: Edges (2) Break Off When Rubber Mount (1) Is Pulled Out In Direction Of Arrow
Courtesy of BMW OF NORTH AMERICA, INC.

Assemble special tool 33 4 140 in conjunction with 33 0 011 and 33 0 012.

Fig. 121: Assemble Special Tool 33 4 140
Courtesy of BMW OF NORTH AMERICA, INC.

Withdraw rubber mount using special tools 33 4 140, 33 0 051, 33 0 052 and 33 0 001 from rear axle support bush.

Fig. 122: Withdraw Rubber Mount From Rear Axle Support Bush
 Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Make sure special tool 33 0 001 is correctly positioned in relation to rubber mount. Make sure special tool 33 4 140 is correctly supported on rear axle support bush.

Applicable to front rubber mount: (View of rear axle support from above)

IMPORTANT: Arrow (1) must point on rubber mount (2) in direction of travel.

Fig. 123: Arrow (1) Must Point On Rubber Mount (2) In Direction Of Travel
 Courtesy of BMW OF NORTH AMERICA, INC.

Applicable to rear rubber mount: (View of rear axle support from below)

IMPORTANT: Notch (1) and arrow (2) on rubber mount (3) must point in direction of travel.

Fig. 124: Notch (1) And Arrow (2) On Rubber Mount (3) Must Point In Direction Of Travel
 Courtesy of BMW OF NORTH AMERICA, INC.

Draw in rubber mount (1) with special tools 33 0 002, 33 4 140, 33 0 052 and 33 0 051 as far as it will go into rear axle support bush.

Fig. 125: Draw In Rubber Mount As Far As It Will Go Into Rear Axle Support Bush
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation: For F01/F02/F07 only: Activate and fill air suspension system

33 33 515 REPLACING TWO FURTHER RUBBER MOUNTS FOR REAR AXLE CARRIER

The procedure is described in the document "Replacing two rubber mounts for rear axle carrier", See **33 33 101 Replacing two rubber mounts for rear axle carrier.**

41 WHEEL BEARINGS

33 41 005 REPLACING LEFT DRIVE FLANGE ON REAR AXLE SHAFT

Special tools required:

- 33 2 116 33 2 110 REMOVAL AND INSTALLATION TOOL
- 33 2 160 SPACER RING
- 33 2 201 33 2 200 FIXTURE
- 33 4 041 33 4 040 SET OF TOOLS
- 33 4 042 33 4 040 SET OF TOOLS
- 33 4 043 33 4 040 SET OF TOOLS
- 33 4 045 33 4 040 SET OF TOOLS
- 33 4 048 33 4 040 SET OF TOOLS
- 33 4 200 TOOL KIT / STRIKER FIXTURE

Necessary preliminary tasks:

- Remove output shaft, see 33 21 001 Removing and installing / replacing left output shaft.
- Remove brake disc
- Remove pulse generator, see 34 52 535 REPLACING A REAR PULSE GENERATOR .

Force drive flange with special tools 33 2 116 / 33 2 201 , 33 2 160 , 33 4 200 and 5 wheel studs out of wheel bearing.

NOTE: **Rounded inside edge of special tool 33 2 160 must point to drive flange.**

Fig. 126: Special Tool (33 2 116/33 2 201), (33 4 200) And (33 2 160)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: The wheel bearing is destroyed when the drive flange is removed and cannot be reused!

Install new wheel bearing, see 33 41 153 Replacing left wheel bearing on rear axle shaft.

Installation:

Draw in drive flange with special tools 33 4 041 , 33 4 042 , 33 4 043 , 33 4 045 and 33 4 048 .

Fig. 127: Special Tool (33 4 048), (33 4 041) And (33 4 043)
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Adjust handbrake, see 34 10 014 ADJUSTING HANDBRAKE .

33 41 007 REPLACING RIGHT DRIVE FLANGE ON REAR AXLE SHAFT

NOTE: The procedure is described in the document "Replacing drive flange on rear axle shaft on left." See 33 41 005 Replacing left drive flange on rear axle shaft.

33 41 153 REPLACING LEFT WHEEL BEARING ON REAR AXLE SHAFT

Special tools required:

- 33 3 261 33 3 260 SET OF TOOLS
- 33 3 262 33 3 260 SET OF TOOLS
- 33 3 263 33 3 260 SET OF TOOLS
- 33 3 264 33 3 260 SET OF TOOLS
- 33 3 265 33 3 260 SET OF TOOLS

Necessary preliminary tasks:

- Remove drive flange for rear axle shaft, see 33 41 005 Replacing left drive flange on rear axle shaft.
- Detach wheel bearing inner race from drive flange

Press retaining ring (1) together using pliers and remove.

Installation:

Install retaining ring (1).

Check seating of retaining ring (1), correct if necessary.

Fig. 128: Pressing Retaining Ring

Courtesy of BMW OF NORTH AMERICA, INC.

Pull out wheel bearing with special tools 33 3 261 , 33 3 262 and 33 3 263 .

Fig. 129: Pulling Special Tool (33 3 261), (33 3 262) And (33 3 263)

Courtesy of BMW OF NORTH AMERICA, INC.

**IMPORTANT: Do not reuse old wheel bearing!
Note installation direction of wheel bearing.**

Installation:

Draw in wheel bearing (1) with special tools 33 3 261 , 33 3 264 and 33 3 265 .

Fig. 130: Special Tool (33 3 261), (33 3 264) And (33 3 265)
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Adjust handbrake, see 34 10 014 ADJUSTING HANDBRAKE .

33 41 155 REPLACING RIGHT WHEEL BEARING ON REAR AXLE SHAFT

NOTE: Procedure is described in the document "Replacing wheel bearing on rear axle shaft on left", see 33 41 153 Replacing left wheel bearing on rear axle shaft.

52 SHOCK ABSORBER

33 52 000 REMOVING AND INSTALLING / REPLACING REAR LEFT OR RIGHT SHOCK ABSORBER

NOTE: Read and comply with Information on replacing shock absorbers, see 33 00 ... Information on replacing shock absorbers.

Necessary preliminary tasks:

- Remove rear wheel, see 36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL .
- Remove luggage compartment panel on left and/or right, see 51 47 151 REMOVING AND INSTALLING / REPLACING LEFT LUGGAGE COMPARTMENT WHEEL ARCH TRIM .

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons. When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Support trailing arm with a workshop jack (1).

Release screw.

Installation:

Thrust washer (2) on rubber bearing must point to screw head.

Tighten bolt in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Tightening torque: 33 52 1AZ, see **33 52 SHOCK ABSORBERS** .

Fig. 131: Locating Support Trailing Arm With Workshop Jack
Courtesy of BMW OF NORTH AMERICA, INC.

Open and secure anti-drumming lining (1) in area of support bearing.

Unscrew nuts (2).

Remove shock absorber with support bearing towards bottom.

Installation:

Replace self-locking nuts.

Tightening torque: 33 52 3AZ, see **33 52 SHOCK ABSORBERS** .

Fig. 132: Anti-Drumming Lining With Nut
 Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

Remove support bearing, see **33 52 161 Replacing rear left or right thrust bearing for spring strut / shock absorber**.

Remove or detach plate (1), auxiliary damper (2) and protective tube (3) from shock absorber (4).

Installation:

Check auxiliary damper (2) and protective tube (3) for damage, replace if necessary.

Fig. 133: Detach Plate, Auxiliary Damper And Protective Tube From Shock Absorber
 Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check that output shaft is correctly seated in rear differential.

Necessary preliminary tasks:

- Remove rear shock absorber **33 52 000 Removing and installing / replacing rear left or right shock absorber**.

Unscrew nut (1).

Remove plate (2) and support bearing (3).

Installation:

Replace self-locking nut.

Tightening torque: 33 52 2AZ, see **33 52 SHOCK ABSORBERS** .

Fig. 134: Support Bearing, Plate And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

53 SPRINGS WITH SUSPENSION

33 53 ... MEASURING RIDE-LEVEL HEIGHT OF VEHICLE

Necessary preliminary tasks:

- Tighten bolt in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Determine actual ride height (A) - to do so, attach tape measure to rim flange (2) at bottom middle and measure to lower edge of wheel arch (1).

Fig. 135: Ride-Level Height Of Vehicle

Courtesy of BMW OF NORTH AMERICA, INC.

33 53 000 REMOVING AND INSTALLING / REPLACING REAR LEFT OR RIGHT COIL SPRING

IMPORTANT: Both coil springs on the relevant axle must be replaced only in the event of corrosion breakage!

Necessary preliminary tasks:

- Remove rear wheel, see **36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL** .
- Remove output shaft from rear differential and tie back, see **33 21 001 Removing and installing / replacing left output shaft**.
- Remove stabilizer link on both sides from stabilizer, see **33 55 040 Replacing stabilizer links for stabilizer**.
- If necessary, remove jointed rod from sensor lever of rideheight sensor, see **37 14 512 REPLACING REAR RIDE-HEIGHT SENSOR** .

IMPORTANT: Risk of damage!

Brake hose must not be exposed to tensile loads.

Release screw and remove bracket with brake hose.

Tightening torque: 34 32 3AZ, see **34 32 BRAKE LINES** .

Fig. 136: Locating Bracket With Brake Hose

Courtesy of BMW OF NORTH AMERICA, INC.

WARNING: Danger of injury!

Failure to comply with the following instructions may result in the vehicle slipping off the lifting platform and critically injuring other persons.

When supporting components, make sure that

- the vehicle can no longer be raised or lowered
- the vehicle does not lift off the locating plates on the lifting platform

Release screw.

Lower workshop jack (1).

Installation:

Thrust washer (2) on rubber bearing must point to screw head.

Tighten bolt in normal position, see **32 00 ... MOVING VEHICLE INTO NORMAL POSITION** .

Tightening torque: 33 52 1AZ, see **33 52 SHOCK ABSORBERS** .

Fig. 137: Locating Support Trailing Arm With Workshop Jack
Courtesy of BMW OF NORTH AMERICA, INC.

Press trailing arm downwards.

Pull out barrel spring to the side.

Remove upper spring pad (1) from take-up locator/frame side member.

Installation:

Position coil spring with upper spring pad (1) on lower spring pad (2) mounted in control arm and align to take-up locator/frame side member.

Raise trailing arm using a workshop jack.

Fig. 138: Removing Upper Spring Pad From Take-Up Locator/Frame Side Member
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Spring pads must be positively seated in the take-up locator/frame side member or control arm to prevent the coil spring from springing out of the centering mount.

Installation:

Check spring mounts (1, 3) for damage, replace if necessary.

Attach spring mount at top (1) to coil spring (2).

Fig. 139: Spring Mounts And Coil Spring
Courtesy of BMW OF NORTH AMERICA, INC.

After installation:

- Check headlight adjustment, correct if necessary, see **63 10 004 ADJUSTING HEADLIGHTS** .

55 STABILIZER BAR

33 55 000 REMOVING AND INSTALLING/REPLACING REAR STABILIZER

Necessary preliminary tasks:

- Remove emergency wheel pan, see **51 71 495 REMOVING AND INSTALLING/REPLACING EMERGENCY WHEEL PAN** .
- Remove stabilizer link on both sides from stabilizer, see **33 55 040 Replacing stabilizer links for stabilizer**.

Release screws (1).

Remove stabilizer (2) towards rear.

Installation:

Check rubber mount on both sides, replace if necessary, see **33 55 021 Replacing both rubber mounts for stabilizer mounting**.

Tightening torque: 33 55 3AZ, see **33 55 STABILIZER BAR** .

Fig. 140: Rear Stabilizer And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

Remove rubber mount on both sides from stabilizer, see **33 55 021 Replacing both rubber mounts for stabilizer mounting**.

33 55 021 REPLACING BOTH RUBBER MOUNTS FOR STABILIZER MOUNTING

Necessary preliminary tasks:

- Remove emergency wheel pan, see **51 71 495 REMOVING AND INSTALLING/REPLACING EMERGENCY WHEEL PAN** .

Release screws (1).

Tightening torque: 33 55 3AZ, see **33 55 STABILIZER BAR** .

Turn stabilizer in downwards direction.

Remove retaining bracket (2) and rubber mount (3).

Installation:

Keep retaining bracket (2), rubber mount (3) and stabilizer clean and free from oil and grease.

Fig. 141: Retaining Bracket, Rubber Mount And Screw
Courtesy of BMW OF NORTH AMERICA, INC.

33 55 040 REPLACING STABILIZER LINKS FOR STABILIZER

Special tools required:

- **31 1 140 OPEN-END WRENCH WAF 16/18**

Release nuts (1, 2); grip with special tool 31 1 140 if necessary.

Remove stabilizer link (3).

Installation:

Replace self-locking nuts.

Tightening torque: 33 55 7AZ, see **33 55 STABILIZER BAR** .

Fig. 142: Stabilizer Link And Nuts
Courtesy of BMW OF NORTH AMERICA, INC.

90 TROUBLESHOOTING

33 90 ... REAR AXLE TROUBLESHOOTING

Observe troubleshooting for shock absorbers, see [33 90 ... Troubleshooting shock absorber.](#)

REAR AXLE TROUBLESHOOTING CHART

Fault	Cause	Remedy
Grinding noise (only when cornering)	Refer to <u>34 90 ... TROUBLESHOOTING BRAKE SYSTEM</u>	
	Wheel bearings faulty	Install new wheel bearings, see <u>33 41 153 Replacing left wheel bearing on rear axle shaft.</u>
Vibration (90 - 160 km/h)	Wheel imbalance	Balance wheels, see <u>36 10 508 STATIONARY WHEEL BALANCING</u>
	Radial/lateral rim runout	Check rims, replace if necessary, see <u>36 10 713 CHECKING ONE ROAD WHEEL ON BALANCING MACHINE FOR FACE AND RADIAL RUNOUT (WHEEL REMOVED)</u>
	Radial tire runout	Match or replace tires, see <u>36 10 209 CHECKING FRONT AND REAR WHEEL FOR FACE AND RADIAL RUNOUT</u>
	Imbalance in output shaft	Replace output shaft, see <u>33 21 001 Removing and installing / replacing left output shaft</u>
Drumming	Rubber mount of final drive suspension faulty	Replace rubber mount, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
	Rubber mount of rear axle carrier faulty	Replace rubber mount, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
Rattling noise	Refer to Observe troubleshooting for shock absorbers, see <u>33 90 ... Troubleshooting shock absorber..</u>	
	Stabilizer link loose or defective	Check screw connection, replace stabilizer link if necessary, see <u>33 55 040 Replacing stabilizer links for stabilizer</u>
	Rubber mount of rear axle carrier loose or faulty	Check seat Replace rubber mount if necessary, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
Tail-end skid when braking with each side on different road surface	Rubber mount/ball joint of trailing arms faulty	Replace rubber mount/ball joint, see <u>33 32 042 Replacing a rubber mount in trailing arm, front</u>
Hesitation of rear wheels with hard braking	Rubber mount/ball joint of trailing arms faulty	Replace rubber mount/ball joint, see <u>33 32 042 Replacing a rubber mount in trailing arm, front</u>
	Observe troubleshooting for shock absorbers, see <u>33 90 ... Troubleshooting shock absorber.</u>	
	Rubber mount of	

Poor straight-running stability (steering wheel inclination)	rear axle carrier faulty	Replace rubber mount, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
	Rubber mount of control arm faulty	Replace rubber mount, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
	Rubber mount/ball joint of trailing arms faulty	Replace rubber mount/ball joint, see <u>33 32 042 Replacing a rubber mount in trailing arm, front</u>
	Rear axle alignment incorrectly adjusted	Carry out chassis/wheel alignment check, align rear axle if necessary, see <u>32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE</u>
	Steering wheel inclination: Refer to <u>32 90 ... TROUBLESHOOTING ON STEERING</u>	
Unsteady taking of curves due to self-steering or poor rear end track stability	Rubber mount of rear axle carrier faulty	Replace rubber mount, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
	Rubber mount of final drive suspension faulty	Replace rubber mount, see <u>33 17 004 Replacing all rubber mounts for differential mounting at front</u>
	Observe troubleshooting for shock absorbers, see <u>33 90 ... Troubleshooting shock absorber.</u>	
Excessive tire wear	Front or rear axle alignment incorrectly adjusted	Carry out chassis/wheel alignment check, align rear axle if necessary, see <u>32 00 ... CHASSIS/WHEEL ALIGNMENT CHECK PROCEDURE</u>

33 90 ... TROUBLESHOOTING SHOCK ABSORBER

Read and comply with Information on replacing shock absorbers, see **33 00 ... Information on replacing shock absorbers.**

TRUBLESHOOTING SHOCK ABSORBER CHART

Fault	Cause	Remedy
Wheel knocking (bottoming)	Auxiliary spring faulty	Visually inspect auxiliary spring for cracking, replace auxiliary spring, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
	Shock absorber leaking (oil/gas)	Replace shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
	Shock absorber mounting loose	Tighten shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
	Support bearing loose	Secure support bearing, see <u>33 52 SHOCK ABSORBERS</u>
	Support bearing defective (cracked)	Visually inspect for cracking, replace support bearing, see <u>33 52 000 Removing and installing /</u>

		<u>replacing rear left or right shock absorber</u>
Rattling noise	Protective tube defective/failed	Visually inspect protective tube for cracking, replace protective tube
	Rubber mount/joint eye for lower shock absorber mounting defective	Replace rubber mount/joint eye
	Shock absorber leaking (oil/gas)	Replace shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
	Worn down areas (flattened areas) on tire profile	Replace shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
Long after-swinging of body after driving over rough road	Shock absorber leaking (insufficient shock absorber effect)	Replace shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
Building-up of body in case of successive uneven surfaces	Shock absorber leaking (insufficient shock absorber effect)	Replace shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>
Wheels jumping even on normal road surfaces	Shock absorber leaking (insufficient shock absorber effect)	Replace shock absorber, see <u>33 52 000 Removing and installing / replacing rear left or right shock absorber</u>

2007 SUSPENSION

Rear Axle - Special Tools - X3

33 REAR AXLE

33 1 150 FIXTURE

Note: For detaching drive flanges.

Series: E30, E32, E34, E36, E38, E39, E46/16, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93

Transmission: GS6-17BG, GS6-37BZ, GS6-37DZ, GS6-53BZ, GS6-53DZ, rear diff. type G, rear diff. type K, rear diff. type M, S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S5D 320Z

Storage location: B49, C20, C21, C49

Order number: 33 1 150

Fixture

Consisting of:

1 = 33 1 151 Spindle

2 = 33 1 152 Drift

3 = 33 1 153 Disk

4 = 33 1 154 Adapter plate

Note: Transmission: GS6-57DZ, GS6-53BZ (G-transmission) GS6-51DZ, GS6-51BZ (H-transmission)

5 = 33 1 155 Countersunk screws M10x30 (3 x)

Note: Transmission: GS6-57DZ, GS6-53BZ (G-transmission) GS6-51DZ, GS6-51BZ (H-transmission)

Fig. 1: Fixture (31 1 150)

Courtesy of BMW OF NORTH AMERICA, INC.

33 1 300 RILLEX TAPERED ROLLER BEARING EXTRACTOR

Note: For bevel pinion and differential case (final drive) / for mounting sprocket wheel on crankshaft (M70) / for removing bearing inner race from drive flange (E36, E46)

Transmission: Rear axle differential type G, K, M

Storage location: B6, C6

Order number: 33 1 300

Rillex tapered roller bearing extractor

Consisting of:

1 = 33 1 301 Connecting piece with spindle

1 = 33 1 311 Gripper

2 = 33 1 312 Thrust piece

Note: For removing bearing inner race from drive flange - Series: E36/5

In conjunction with: 00 7 500

5 = 33 1 305 Thrust piece (old)

6 = 33 1 306 Thrust piece

7 = 33 1 307 Thrust piece

8 = 33 1 308 Thrust piece

9 = 33 1 309 Thrust piece

Note: For final drive and for mounting sprocket wheel on crankshaft (M70)

In conjunction with: 00 8 500

Fig. 2: Rillex Tapered Roller Bearing Extractor (33 1 300)
Courtesy of BMW OF NORTH AMERICA, INC.

33 1 340 FIXTURE

In conjunction with: 23 1 300

Note: For installing drive pinion in rear axle differential housing

Series: E23, E24, E28, E32, E34, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E81, E83, E85, E86, E87, E90, E91, E92

Transmission: Rear diff. type G, rear diff. type K, rear diff. type M, S5D 260Z, S5D 310Z, S5D 320Z

Storage location: C22

Order number: 33 1 340

Fixture

Consisting of:

1 = 33 1 341 Reducer

2 = 33 1 342 Spacer bushing

Note: For transmissions S5D 260Z, S5D 310Z and S5D 320Z"

Fig. 3: Fixture (33 1 340)

Courtesy of BMW OF NORTH AMERICA, INC.

33 1 360 FIXTURE

In conjunction with: 33 1 356

Note: For removing and installing outer bearing races of tapered roller bearings

Series: E23, E24, E28, E30, E32, E34, E34tou, E46, E83

Transmission: Rear diff. type K, rear diff. type M

Storage location: A6, B6

Order number: 33 1 360

Fixture

Consisting of:

1 = 33 1 361 Extractor head

2 = 33 1 362 Spindle

3 = 33 1 363 Pressure nut in bearing

4 = 33 1 364 Nut

5 = 33 1 365 Draw-in disc

Note: For bearing shell (drive, outer)

6 = 33 1 366 Slip bush

Note: For bearing shell

7 = 33 1 367 Draw-in disc

Note: For bearing shell (drive, inner)

8 = 33 1 368 Draw-in disc

Note: For bearing shell (drive, left and right)

9 = 33 1 369 Thrust washer

Fig. 4: Fixture (33 1 360)

Courtesy of BMW OF NORTH AMERICA, INC.

33 2 100 CLAMPING FIXTURE

Note: For gripping output shafts when press fitting constant-velocity joint

Series: E12, E21, E23, E24, E28, E30, E31, E32, E34, E36, E36/7, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

Storage location: C23

SI number: 1 06 94 (801)

Order number: 33 2 100

Clamping fixture

Consisting of:

1 = 33 2 101 Frame

2 = 33 2 102 Insert shell (2 x)

Note: Diameter 30 mm - model series: E38 / model: 730i

3 = 33 2 103 Insert shell (2 x)

Note: Diameter 35 mm - model series: all, except E38

Fig. 5: Clamping Fixture (33 2 100)

Courtesy of BMW OF NORTH AMERICA, INC.

33 2 110 REMOVAL AND INSTALLATION TOOL

Minimum set: Mechanical tools

In conjunction with: 33 2 150 (E53)

Note: For removing and installing output shaft in drive flange as well as for removing front wheel bearing unit.

Series: E30, E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

Storage location: C13, C14, C38

Order number: 33 2 110

Removal and installation tool

Consisting of:

1 = 33 2 111 Pressure spindle

Note: For pressing out. Model series: E30, E31, E32, E36, E38, E39, E46, E53, E65, E66, E67, E83, E85

4 = 33 2 114 Spindle

Note: For installation / model series: E30

5 = 33 2 115 Nut with bearing

Note: Model series: E30, E31, E32, E36, E38, E39, E46, E52, E53, E60, E61, E65, E66, E67, E83, E85, RR1

6 = 33 2 116 Bridge

Note: New version 09/98 Model series: E30, E31, E32, E36, E38, E39, E46, E52, E53, E60, E61, E65, E66, E67, E83, E85, E90, RR1

7 = 33 2 117 Threaded piece

Note: Model series: E30, E31, E32, E36, E38, E39, E46, E53, E65, E66, E67, E83, E85

8 = 33 2 118 Spindle for installation

Note: Model series: E31, E52, E53, E60, E61, E65, E66, E67, E83

9 = 33 2 119 Spindle

Note: For installation / model series: E36, E46

Fig. 6: Removal And Installation Tool (33 2 110)
Courtesy of BMW OF NORTH AMERICA, INC.

33 2 160 SPACER RING

Minimum set: Mechanical tools

In conjunction with: 33 2 110

Note: For removing and installing output shaft in drive flange, front and rear, as well as for removing front wheel bearing unit

Series: E46, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1

Storage location: C39

SI number: 1 17 03 (012)

Order number: 33 2 160

Spacer ring

Fig. 7: Spacer Ring (33 2 160)

Courtesy of BMW OF NORTH AMERICA, INC.

33 2 200 FIXTURE

Minimum set: Mechanical tools

In conjunction with: 33 4 200, 33 5 070

Note: For removing and installing output shaft in drive flange as well as for removing front wheel bearing unit.

Series: E30, E31, E32, E34, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

Order number: 33 2 200

Fixture

Consisting of:

1 = 33 2 201 Basic body

2 = 33 2 202 Counterholder

In conjunction with: 33 5 070

3 = 33 2 203 Spindle M20x1.5 / length 150 mm

Note: For pressing out. Model series: E30, E31, E32, E36, E38, E39, E46, E53, E65, E66, E67, E83, E85

4 = 33 2 204 Spindle M20x1.5 / length 180 mm

Note: For drawing in. Model series: E30

5 = 33 2 205 Spindle M20x1.5 / length 190 mm

Note: For drawing in. Connection: M27x1.5 Model series: E31, E52, E53, E60, E61, E65, E66, E67, E83

6 = 33 2 206 Spindle M20x1.5 / length 190 mm

Note: For drawing in. Connection: M24x1.5 Model series: E36, E46

7 = 33 2 207 Threaded piece

8 = 33 2 208 Nut with thrust bearing

Note: Model series: E30, E31, E32, E36, E38, E39, E46, E52, E53, E60, E61, E65, E66, E67, E83, E85, RR1

33 3 050 FIXTURE

Note: For removing and installing rubber mount in 20° semi-trailing arm

Series: E28, E30, E53, E83

Storage location: B6, C6

Order number: 33 3 050

Fixture

Consisting of:

1 = 33 3 051 Nut with bearing

Note: Model series: E28, E30

2 = 33 3 052 Spindle

Note: Model series: E28, E30

3 = 33 3 053 Sleeve

Note: Model series: E28, E30

4 = 33 3 054 Thrust piece

5 = 33 3 055 Thrust piece

Note: Model series: E28, E30 - Model: 518...735

6 = 33 3 056 Thrust piece

Note: Model series: E28, E30 - Model: 316...323i

Fig. 8: Fixture (33 3 050)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 140 SET OF TOOLS

Minimum set: Mechanical tools

Note: For removing and installing rubber mounts in rear axle carrier (rear axle support)

Series: E32, E34, E46, E60, E61, E63, E64, E83, E85, E86, E87

Storage location: C13

SI number: 1 04 86 (566)

Order number: 33 3 140

Set of tools

Consisting of:

1 = 33 3 141 Removal and installation disc

Note: Model series: E32, E34, E46, E85

2 = 33 3 142 Sleeve

Note: Model series: E32, E34, E46, E85

3 = 33 3 143 Washer

Note: For bracing during installation Model series: E32, E34, E46, E85

4 = 33 3 144 Spindle with lock nut

Note: Model series: E32, E34, E46, E60, E61, E63, E64, E83, E85

5 = 33 3 145 Nut with bearing

Note: Model series: E32, E34, E46, E60, E61, E63, E64, E85

Fig. 9: Set Of Tools (33 3 140)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 220 SET OF TOOLS

Minimum set: Mechanical tools

In conjunction with: 00 8 550, 33 3 103, 33 3 104, 33 3 107

Note: For removing and installing rubber mount in rear axle carrier

Series: E31, E36, E46, E83, E85, E86

Storage location: A26, B40

SI number: 1 05 90(207)

Order number: 33 3 220

Set of tools

Consisting of:

1 = 33 3 221 Shaped disk

Note: For removing front rubber mounts from rear axle carrier / model series: E31

In conjunction with: 00 8 550 and 33 3 107

2 = 33 3 222 Upper shaped disk

Note: For installing front rubber mounts in rear axle carrier

In conjunction with: 33 3 103, 33 3 104

3 = 33 3 223 Lower shaped piece

Note: For installing front rubber mounts in rear axle carrier

In conjunction with: 33 3 103, 33 3 104

4 = 33 3 224 Shaped disk

Note: For removing rear rubber mounts from rear axle carrier / model series: E31

In conjunction with: 00 8 550 and 33 3 107

5 = 33 3 225 Upper shaped disk

Note: For installing rubber mounts in rear axle carrier Model series: E31

In conjunction with: 33 3 103, 33 3 104

6 = 33 3 226 Lower shaped piece

Note: For installing rubber mounts in rear axle carrier Model series: E31

In conjunction with: 33 3 103, 33 3 104

33 3 227 Thrust piece

Note: Model series: E36, E46

33 3 228 Slip bushing

Note: Model series: E36, E46

Fig. 10: Set Of Tools (33 3 220)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 260 SET OF TOOLS

Minimum set: Mechanical tools

Note: For removing and installing rear wheel bearings in wheel carrier and for fitting drive flange

Series: E31, E34, E38, E46/16, E52, E53, E60, E61, E67, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1

Storage location: B7, B8

SI number: 1 05 90 (207)

Order number: 33 3 260

Set of tools

Consisting of:

1 = 33 3 261 Spindle with 2 nuts

Note: Model series: E31, E34, E38, E46/16, E52, E53, E60, E61, E83, RR1

2 = 33 3 262 Spacer sleeve

Note: For removing wheel bearing from wheel carrier and installing drive flange Model series: E31, E34, E38, E46/16, E52, E53, E83

3 = 33 3 263 Adapter sleeve

Note: For removing wheel bearing from wheel carrier - Model series: E31, RR1

4 = 33 3 264 Adapter sleeve

Note: For installing wheel bearing in wheel carrier Model series: E31, E34, E38, E46/16, E52, E53, E83, RR1

5 = 33 3 265 Thrust washer

Note: For installing wheel bearing in wheel carrier - Model series: E31

6 = 33 3 266 Adapter sleeve

Note: For installing drive flange and removing wheel bearing Model series: E38, E52, E53, E60, E61, E83, RR1

7 = 33 3 267 Thrust washer

Note: For installing drive flange Model series: E31, E34, E38, E46/16, E52, E53

8 = 33 3 268 Support disk

Note: For installing wheel bearing Model series: E38, E52, E53, E60, E61, E83, RR1

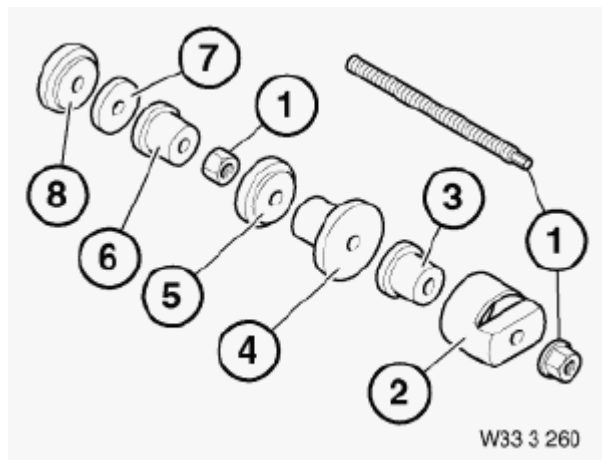

Fig. 11: Set Of Tools (33 3 260)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 270 SET OF SUPPORTS

In conjunction with: E36/5 = 33 3 303 E65 and E66 = 00 2 030, 00 2 040,

Note: For removing and installing rear axle

Series: E36/5, E60, E61, E63, E64, E65, E66, E67, E81, E83, E87, E90, E91, E92, E93

SI number: 1 01 94 (766)

Order number: 33 3 270

Set of supports

Consisting of:

1 = 33 3 271 Mounting

Note: For cross-beam

2 = 33 3 272 T-piece (2 x)

3 = 33 3 273 Base plate

Note: For hydraulic lifter

4 = 33 3 274 Hydraulic lifter

Note: Hydraulic mini-lifter Model series: E36/5, E60, E65, E66, E67

5 = 33 3 275 Pressure piece (rubber)

Note: For hydraulic lifter

Fig. 12: Set Of Supports (33 3 270)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 280 SETTING GAUGE

Note: For aligning bearing block from frame side member to wheel center

Series: E36, E46, E67, E83, E85, E86

SI number: 1 19 99 (484)

Order number: 33 3 280

Setting gauge

Fig. 13: Setting Gauge (33 3 280)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 310 REMOVAL/INSTALLATION TOOL KIT

Minimum set: Mechanical tools

In conjunction with: 33 4 181 (E46)

Note: For removing and installing rubber mounts in rear axle suspension, front and rear

Series: E31, E36, E38, E46, E60, E61, E63, E64, E65, E66, E67, E81, E83, E85, E86, E87, E90, E91, E92, E93, R53, RR1

Storage location: A7

SI number: 1 05 90 (207)

Order number: 33 3 310

Removal/installation tool kit

Consisting of:

1 = 33 3 311 Locator sleeve

Note: For removing and installing rubber mount / model series: E31, E36

2 = 33 3 312 Thrust piece

Note: For removing rubber mount at rear differential cover / model series: E31, E36, E38, E60, E61, E63, E64, E65, E66, E67, RR1

3 = 33 3 313 Thrust piece

Note: For installing rubber mount on rear differential cover - model series: E31, E36, E38 For removing rubber mount at rear differential cover - model series: E46

4 = 33 3 314 Spindle

Note: For removing and installing rubber mount Model series: E31, E36, E38, E46, E60, E61, E63, E64, E65, E66, E67, E85, RR1

5 = 33 3 315 Nut with bearing

Note: Model series: E31, E36, E38, E46, E60, E61, E63, E64, E65, E66, E67, E85, RR1

6 = 33 3 316 Thrust piece

Note: For installing rear rubber mount in rear axle carrier / model series: E31

In conjunction with: 33 3 333 and 33 3 334

Fig. 14: Removal/Installation Tool Kit (33 3 310)
Courtesy of BMW OF NORTH AMERICA, INC.

33 3 330 REMOVAL AND INSTALLATION TOOL

Minimum set: Mechanical tools

Note: For removing and installing ball joint and rubber mount in semi-trailing arm

Series: E31, E36, E38, E39, E46, E52, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, RR1

Storage location: A14

SI number: 1 10 90(288)

Order number: 33 3 330

Removal and installation tool

Consisting of:

1 = 33 3 331 Spacer sleeve

Note: For removing / model series: E36, E46

2 = 33 3 332 Extractor sleeve

Note: Model series: E36, E46

3 = 33 3 333 Spindle with forcing nut

4 = 33 3 334 Spacer sleeve

Note: For installing ball joint Model series: E31, E36, E38, E39, E46, E65, E66, E85

Fig. 15: Removal And Installation Tool (33 3 330)
Courtesy of BMW OF NORTH AMERICA, INC.

33 3 350 SET OF TOOLS

Minimum set: Mechanical tools

Note: For removing and installing rubber mount in top and bottom control arms

Series: E36, E46, E83, E85, E86

Storage location: A22

SI number: 1 10 90(288)

Order number: 33 3 350

Set of tools

Consisting of:

1 = 33 3 351 Sleeve with centering pin

Note: For pressing rubber mount in/out

2 = 33 3 352 Thrust sleeve

Note: For pressing out rubber mount in upper control arm

3 = 33 3 353 Shaped piece

Note: For pressing in rubber mount in lower control arm

33 3 354 Spacer

Note: For maintaining distance between both control arm halves when pressing rubber mount in/out

Fig. 16: Set Of Tools (33 3 350)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 360 SET OF TOOLS

Minimum set: Mechanical tools

In conjunction with: 33 3 311, 33 3 314

Note: For removing and installing rubber mount in bottom of rear axle carrier, threaded connection of rear axle differential

Series: E31, E36, E46, E83, E85, E86

Storage location: B32

SI number: 1 10 90(288)

Order number: 33 3 360

Set of tools

Consisting of:

1 = 33 3 361 Spacer sleeve

Note: For removing rubber mount in rear axle carrier at bottom / model series: E36, E46 For removing rubber mount in rear differential mounting at front left / model series: E46

In conjunction with: 33 3 333 (E36, E46), 33 3 314 and 33 3 315 (E46)

2 = 33 3 362 Shaped piece

Note: For removing and installing rubber mount in rear axle carrier at bottom, rear differential mounting and rear differential

In conjunction with: 33 3 311, 33 3 333 (installation) / 33 3 314, 33 3 315 and 33 4 173 (rear differential)

Fig. 17: Set Of Tools (33 3 360)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 370 SET OF TOOLS

Minimum set: Mechanical tools

In conjunction with: 33 3 314, 33 3 315, 33 4 140 and 33 4 155

Note: For removing and installing rubber mount in rear axle carrier

Series: E46, E83, E85, E86

Storage location: B37, C37

SI number: 1 02 98 (302)

Order number: 33 3 370

Set of tools

Consisting of:

1 = 33 3 371 Spindle

Note: Two-stage with M12 nut

2 = 33 3 372 Shaped disc

Note: For removing and installing rubber mount

3 = 33 3 373 Disc

Note: For gripping when installing rubber mount

Fig. 18: Set Of Tools (33 3 370)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 390 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving rotary shaft seal onto drive flange of rear axle differential

Series: E30, E36, E46, E81, E83, E85, E86, E87, E90, E91

Storage location: A37

SI number: 1 02 98 (302)

Order number: 33 3 390

Drift

Fig. 19: Drift (33 3 390)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 400 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving rotary shaft seal onto output flange of rear axle differential

Series: E30, E36, E46, E83, E85, E87, E90, E91

Storage location: A37

SI number: 1 02 98(302)

Order number: 33 3 400

Drift

Fig. 20: Drift (33 3 400)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 420 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seals on output flanges

Series: E30, E32, E34, E36, E38, E46, E52, E83

Transmission: HAG 220kom, HAG type M

Storage location: A32

SI number: 1 05 94(789)

Order number: 33 3 420

Drift

Fig. 21: Drift (33 3 420)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 440 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seal (with axial sealing lip) on input flange

Series: E30, E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

Transmission: Rear diff. 220kom, rear diff. 225kom, rear diff. type G

Storage location: A31

SI number: 1 05 94 (789)

Order number: 33 3 440

Drift

Fig. 22: Drift (33 3 440)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 450 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seals on output flanges

Series: E30, E31, E32, E34, E36, E38, E46, E52, E83

Transmission: HAG 220kom, HAG type G

Storage location: A32

SI number: 1 05 94(789)

Order number: 33 3 450

Drift

Fig. 23: Drift (33 3 450)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 470 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seal on input flange

Series: E30, E32, E34, E36, E38, E39, E46, E53, E60, E61, E63, E64, E65, E66, E81, E83, E85, E86, E87, E90, E91, E92, E93

Transmission: Rear diff. 188kom, rear diff. 225kom, rear diff. type M

Storage location: A32

SI number: 1 05 94 (789)

Order number: 33 3 470

Drift

Fig. 24: Drift (33 3 470)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 480 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving in retaining plate on drive shaft (rear diff Types K and M) and for driving in locking ring in front axle differential drive flange (E34 AWD, E46)

Series: E30, E32, E34, E36, E38, E39, E46, E53, E60, E61, E63, E64, E65, E66, E81, E83, E85, E86, E87, E90, E91, E92, E93

Transmission: Rear diff. 225kom, rear diff. type K, rear diff. type M

Storage location: A31

SI number: 1 01 94 (766)

Order number: 33 3 480

Drift

Fig. 25: Drift (33 3 480)

Courtesy of BMW OF NORTH AMERICA, INC.

33 3 490 DRIFT

In conjunction with: 00 5 500

Note: For driving in retaining plate on output shaft when replacing shaft seal and drive flange

Series: E31, E32, E34, E36, E36/7, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E90, E91, E92, E93, RR1, RR2

Transmission: Rear diff 225kom, rear diff type G

Storage location: A31

SI number: 1 05 94 (789)

Order number: 33 3 490

Drift

Fig. 26: Drift (33 3 490)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 030 SET OF TOOLS

Minimum set: Mechanical tools

Note: For removing and installing rear wheel bearings

Series: E23, E24, E28, E32, E34, E36, E46, E81, E83, E85, E86, E87, E90, E91, E92, E93

Storage location: C8

Order number: 33 4 030

Set of tools

Consisting of:

1 = 33 4 031 Bell

Note: For gripping when removing rear wheel bearing

2 = 33 4 032 Spindle

Note: Model series: E28

3 = 33 4 033 Thrust washer

Note: For removing rear wheel bearing / Model series: E28 / model: 518, 528i

4 = 33 4 034 Guide sleeve

Note: For installing rear wheel bearing / Model series: E28 / model: 518, 520i

5 = 33 4 035 Thrust washer

Note: For installing rear wheel bearing / Model series: E28 / model: 518, 520i

6 = 33 4 036 Guide sleeve

Note: For installing rear wheel bearing / Model series: E28 / model: 525i, 528i

7 = 33 4 037 Thrust washer

Note: For installing rear wheel bearing / Model series: E28 / model: 525i, 528i

8 = 33 4 038 Nut with bearing

Note: Model series: E28

Fig. 27: Set Of Tools (33 4 030)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 040 SET OF TOOLS

Minimum set: Mechanical tools

Note: For removing and installing rear wheel bearings

Series: E30, E36, E46, E81, E83, E85, E86, E87, E90, E91, E92, E93

Storage location: C8

Order number: 33 4 040

Set of tools

Consisting of:

1 = 33 4 041 Spindle

Note: Model series: E30, E46

2 = 33 4 042 Nut with bearing

Note: Model series: E30, E46

3 = 33 4 043 Nut

Note: Model series: E30, E46

4 = 33 4 044 Bell

Note: For gripping when removing rear wheel bearing / Model series: E30

5 = 33 4 045 Pull-out disk

6 = 33 4 046 Guide sleeve

Note: For installing rear wheel bearing / Model series: E30

7 = 33 4 047 Thrust washer

Note: For installing rear wheel bearing

8 = 33 4 048 Draw-in sleeve for rear axle shaft

9 = 33 4 049 Guide sleeve

Note: For installing wheel bearing

Fig. 28: Set Of Tools (33 4 040)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 140 UNIVERSAL SUPPORT

Minimum set: Mechanical tools

In conjunction with: 33 4 150

Note: For removing rubber mount in rear axle carrier

Series: E36, E38, E39, E39tou, E46, E52, E61, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, R53, RR1, RR2

Storage location: A7

SI number: 1 02 99 (417)

Order number: 33 4 140

Universal support

Consisting of:

1 = 33 4 141 Threaded pipe

2 = 33 4 142 Support foot (2 x)

Note: Model series: E38, E39, E46

3 = 33 4 143 Sliding piece

4 = 33 4 144 Guide rod

5 = 33 4 145 Guide rod

Note: With threaded lug

6 = 33 4 146 Locating plate

Note: With screws

7 = 33 4 147 Thrust piece (2 x)

Note: With screws - Model series: E38, E39, E46

8 = 33 4 148 Support foot, long (2 x)

Note: Model series: E39/2, E65, E67, RR1

9 = 33 4 149 Thrust piece (2 x)

Note: With countersunk head screw - Model series: E39/2, E65, E67, E87

Fig. 29: Universal Support (33 4 140)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 150 REMOVAL AND INSTALLATION TOOL

Minimum set: Mechanical tools

In conjunction with: 33 4 140, 33 3 371

Note: For removing and installing rubber mount on rear axle carrier

Series: E38, E39, E39tou, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, RR1, RR2

Storage location: B38, B8, C7, C8

SI number: 1 06 94 (801)

Order number: 33 4 150

Removal and installation tool

Consisting of:

1 = 33 4 151 Pressure plate

Note: For removal / model series: E38, E39, E46, E52

2 = 33 4 152 Pressure plate

Note: For installation Model series: E38, E39, E46, E52, RR1

3 = 33 4 153 Support plate

Note: For installation / model series: E38, E39, E46, E52

4 = 33 4 154 Spindle with lock nut

Note: Model series: E38, E39, E46, E52, E60, E61, E63, E64

5 = 33 4 155 Nut with bearing

In conjunction with: 33 3 371 (E46)

6 = 33 4 156 Spindle, long

Note: Model series: E39/2, E65, E66, E67, RR1

7 = 33 4 157 Pressure plate

Note: For installation - model series: E39/2, E65, E66, E67, RR1

8 = 33 4 158 Pressure plate

Note: For removal - model series: E53, E65, E66, E67, RR1

9 = 33 4 159 Support disk

Note: For installation - model series: E53, E65, E66, E67, RR1

Fig. 30: Removal And Installation Tool (33 4 150)
Courtesy of BMW OF NORTH AMERICA, INC.

33 4 170 REMOVAL/INSTALLATION THRUST PIECES

Minimum set: Mechanical tools

In conjunction with: 33 3 314, 33 3 315, 33 3 362

Note: For removing and installing rubber mount at front and rear of rear axle differential, solid rubber mount

Series: E38, E39, E46, E83, E85, E86

Storage location: B34

SI number: 1 06 94(801)

Order number: 33 4 170

Removal/installation thrust pieces

Consisting of:

1 = 33 4 171 Support tube

Note: For removal

2 = 33 4 172 Thrust piece

Note: For installation

3 = 33 4 173 Support plate

Note: For installation

In conjunction with: 33 3 114, 33 3 315, 33 3 362 (E46)

4 = 33 4 174 Thrust piece

Note: For removal

Fig. 31: Removal/Installation Thrust Pieces (33 4 170)
Courtesy of BMW OF NORTH AMERICA, INC.

33 4 180 REMOVAL/INSTALLATION TOOL

Minimum set: Mechanical tools

In conjunction with: 33 3 314, 33 3 315

Note: For removing and installing rubber mount in rear axle differential

Series: E39, E46, E60, E61, E63, E64, E83, E85, E86

Storage location: B34

SI number: 1 12 95 (992)

Order number: 33 4 180

Removal/installation tool

Consisting of:

1 = 33 4 181 Support tube

Note: For removing

2 = 33 4 182 Thrust piece

Note: For installing

3 = 33 4 183 Support plate

Note: For installing

4 = 33 4 184 Thrust piece

Note: For removing

Fig. 32: Removal/Installation Tool (33 4 180)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 200 TOOL KIT / STRIKER FIXTURE

Minimum set: Mechanical tools

In conjunction with: 33 2 116

Note: For removing rear wheel flange when replacing wheel bearings

Series: E12, E21, E23, E24, E28, E30, E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1

SI number: 1 06 94 (801)

Order number: 33 4 200

Tool kit / striker fixture

Consisting of:

1 = 33 4 201 Impact rod with handle

3 = 33 4 203 Impact piece

5 = 33 4 205 Adapter

Note: For removing wheel guide joint from E53, E83

In conjunction with: Impact tool 33 4 200

33 4 204 M20 nut and M20 flat nut

Note: Nuts 33 4 204 are integrated in 33 4 201 33 4 204 is only continued as a spare part number.

Fig. 33: Tool Kit / Striker Fixture (33 4 200)
Courtesy of BMW OF NORTH AMERICA, INC.

33 4 240 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving in radial seal on output flange in rear axle differential

Series: E30, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E91, E92, E93

Storage location: A31

SI number: 1 10 95(976)

Order number: 33 4 240

Drift

Fig. 34: Drift (33 4 240)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 250 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving radial seal into output flange.

Series: E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E90, E91, E92, E93, RR1, RR2

Storage location: A31

SI number: 1 02 96 (035)

Order number: 33 4 250

Drift

Fig. 35: Drift (33 4 240)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 260 SET OF TOOLS

In conjunction with: 33 3 260

Note: For removing and installing front wheel bearings in wheel carrier

Series: E53, E60, E61, E67, E83, E90, E91, E92, RR1

Storage location: C41

Order number: 33 4 260

Set of tools

Consisting of:

1 = 33 4 261 Bushing

Note: For extracting wheel bearing from wheel carrier

2 = 33 4 262 Disk

Note: For installing wheel bearing in wheel carrier

Fig. 36: Set Of Tools (33 4 260)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 320 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving radial seal onto output flange of rear differential. Rear differential:168K / L

Series: E30, E36, E46, E83, E85, E87, E90

Order number: 33 4 320

Drift

Fig. 37: Drift (33 4 320)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 330 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving in radial seal on output flange in rear axle differential. Rear differential: 188K / L

Series: E30, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E91, E92, E93

Order number: 33 4 330

Drift

Fig. 38: Drift (33 4 330)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 400 PULLER FIXTURE

Note: For removing inner wheel bearing races on rear axle

Series: E12, E21, E23, E24, E28, E30, E30/C, E30tou, E31, E32, E32/3, E34, E34tou, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1

SI number: 1 05 99 (426)

Order number: 33 4 400

Puller fixture

Consisting of:

1 = 33 4 401 Basic body

2 = 33 4 402 Spindle

3 = 33 4 403 Wrench, large

4 = 33 4 404 Wrench, small

5 = 33 4 405 Clamping pliers (45...51 mm)

6 = 33 4 406 Clamping pliers (50...55 mm)

7 = 33 4 407 Clamping pliers (55...61 mm)

Note: Model series: E67

Fig. 39: Puller Fixture (33 4 400)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 420 SUPPORT

In conjunction with: 00 2 030

Note: For supporting rear differential during removal and installation.

Series: E31, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E81, E83, E85, E86, E87, E90, E91, E92, RR1, RR2

Order number: 33 4 420

Support

Consisting of:

1 = 33 4 421 Base plate

2 = 33 4 422 Adapter set

4 = 33 4 424 Spindle with pressure piece

5 = 33 4 425 Support angle

Fig. 40: Support (33 4 420)

Courtesy of BMW OF NORTH AMERICA, INC.

33 4 426 MOUNTING ADAPTER

Note: Locator for E85 Z4 M. SI 01 10 06 (264)

SI number: 01 10 06 264

Order number: 33 4 426

Mounting adapter

33 5 014 THRUST PIECE WITH SPLINED KEY

Order number: 33 5 014

Thrust piece with splined key

Fig. 42: Thrust Piece With Splined Key (33 5 014)
Courtesy of BMW OF NORTH AMERICA, INC.

33 5 070 EXTENSION PIECE (2)

Minimum set: Mechanical tools

In conjunction with: 33 5 040, 33 5 050, 33 5 060

Note: Pull-out extension for 33 5 040, 33 5 050, 33 5 060.

Series: E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E81, E83, E85, E86, E87, E90, E91, E92, E93, RR1, RR2

SI number: 01 21 06 (300)

Order number: 33 5 070

Extension piece (2)

Consisting of:

1 = 33 5 071 Extension (1 x)

Fig. 43: Extension Piece (2) (33 5 070)
Courtesy of BMW OF NORTH AMERICA, INC.

33 5 080 DRIFT

Minimum set: Mechanical tools

Note: For driving in shaft seal on drive shaft.

Transmission: Diff. 215 Sp, diff. 220kom, diff. 225kom, diff. type G

SI number: 01 21 06 (300)

Order number: 33 5 080

Drift

Fig. 44: Drift (33 5 080)

33 10 FINAL DRIVE E46 / E83 / E85 168K

TECHNICAL DATA - FINAL DRIVE E46 / E83 / E85 168K

Use only approved rear differential oils.		
New oil filling volume	ltr.	0.9
Oil change volume	ltr.	0.9

33 00 GENERAL - TRACK WIDTH E83

TECHNICAL DATA - GENERAL - TRACK WIDTH E83

Track width for normal position and press-in depth (ET)		
- ET39	mm	1556
- ET46	mm	1542

33 00 REAR AXLE - RIDE HEIGHT E83

TECHNICAL DATA - REAR AXLE - RIDE HEIGHT E83

Ride height specification		in normal position (attach tape measure to rim flange at bottom middle and measure to lower edge of wheel arch)
Deviation from nominal value for all wheels together	Max. mm	10
Series		
17" rim	mm \pm 10	673
18" rim	mm \pm 10	685
19" rim	mm \pm 10	698
20" rim	mm \pm	- -

	10	
Sport suspension (not low slung)		
17" rim	mm ± 10	673
18" rim	mm ± 10	685
19" rim	mm ± 10	698
20" rim	mm ± 10	- -

10 FINAL DRIVE

33 10 FINAL DRIVE E39 / E46 / E83 / E85 188K

TECHNICAL DATA - FINAL DRIVE E39 / E46 / E83 / E85 188K

Use only approved rear differential oils.		
New oil filling volume	ltr.	1.0
Oil change volume	ltr.	1.0

33 10 FINAL DRIVE E46 / E83 / E85 168K

TECHNICAL DATA - FINAL DRIVE E46 / E83 / E85 168K

Use only approved rear differential oils.		
New oil filling volume	ltr.	0.9
Oil change volume	ltr.	0.9

11 FINAL DRIVE WITH COVER

33 10 FINAL DRIVE E39 / E46 / E83 / E85 188K

TECHNICAL DATA - FINAL DRIVE E39 / E46 / E83 / E85 188K

Use only approved rear differential oils.		
New oil filling volume	ltr.	1.0
Oil change volume	ltr.	1.0

33 10 FINAL DRIVE E46 / E83 / E85 168K

TECHNICAL DATA - FINAL DRIVE E46 / E83 / E85 168K

Use only approved rear differential oils.		
---	--	--

New oil filling volume	ltr.	0.9
Oil change volume	ltr.	0.9

41 WHEEL BEARINGS

31 21 WHEEL BEARINGS AND STEERING KNUCKLE ALL

TECHNICAL DATA - WHEEL BEARINGS AND STEERING KNUCKLE ALL

Bearing units lubricated for entire service life and cannot be disassembled		
max. axial runout of wheel hub at wheel bearing flange	max. mm	< 0.03

33 41 WHEEL BEARINGS

TECHNICAL DATA - WHEEL BEARINGS

Double-row, angular ball bearing lubricated for service life and not to be disassembled		
Max. axial wheel bearing play	max. mm	0.06 ... 0.08

2007 SUSPENSION

Rear Axle - Tightening Torques - X3

11 FINAL DRIVE WITH COVER

33 11 REAR DIFFERENTIAL CASE WITH COVER

REAR DIFFERENTIAL CASE WITH COVER - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Case Covers Transmission allocation	E36, E38, E39, E46, E53, E60, E61, E65, E66, E83, E85, E86	M10 8.8	168N 168K 188 188N 188K 210 210N 215	45 Nm

	E31, E38, E39, E60, E63, E64	M12x50 10.9 (black)	Replace screws	135 Nm

31 REAR SUB-FRAME

33 31 REAR AXLE CARRIER

REAR AXLE CARRIER - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Vibration damper to rear axle carrier	E36 / E38 / E46 / E83	M12		77 Nm
	E65 / E66 / E67	M12		100 Nm

32 CONTROL ARMS AND STRUT

33 32 CONTROL ARMS AND STRUTS

CONTROL ARMS AND STRUTS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1 AZ Trailing arm to rear axle carrier	E34 (M5)		Replace screw tighten with special tool 33 3 060 and torque wrench Hazet 6291-2CT	55 Nm
	E30, E32, E34, E36		tighten in normal position	67 Nm
	E30, E32, E34, E36	10.9		77 Nm
2AZ Trailing arm to console	E31	M14 x 1.5		127 Nm
3AZ Trailing arm to wheel carrier	E31	M18 x 1.5		278 Nm
4AZ Traction strut to wheel carrier	E31		Tapered spigot and bore must be free of grease	80 Nm
	E38, E52			
	E39		Tapered spigot and bore must be free of grease	55 Nm
	E53			56 Nm
	E60, E61, E63, E64, E65, E66, E67	M10	Replace nut	65 Nm
	E60, E63, E64, E65, E66	M12	Replace nut	100 Nm
5AZ Control arm to rear axle support	E31		tighten in normal position	95 Nm
	E38		tighten in normal position	60 Nm
	E39		tighten in normal position With torque wrench Hazet 6290-CT	60 Nm
	E52		tighten in normal position	60 Nm
	E53		tighten in normal position with special tool 32 3 150 and torque wrench Hazet 6291 -ICT	59 Nm
	E60, E61, E63, E64, E65, E66, E67		Replace nut tighten in normal position	65 Nm
6AZ Support arm to rear axle support	E31	M14 x 1.5		127 Nm
7AZ Support arm to wheel carrier	E31			150 Nm
8AZ Upper control arm to wheel carrier	E31	M14 x 1.5		127 Nm
	E38, E52			160 Nm
	E39			142 Nm

	E53		Replace nut	165 Nm
	E60, E61, E63, E64, E65, E66		Replace nut	175 Nm
	E67		Replace nut	110 Nm
9AZ Interconnecting link to trailing arm	E31	M16 x 1.5	Tapered spigot and bore both free of grease	120 Nm
10AZ Integral arm to upper control arm	E31	M14 x 1.5		127 Nm
11 AZ Upper/lower control arms to trailing arm	E36, E46	M12 x 1.5	Replace nut tighten in normal position	110 Nm
12AZ Trailing arm to console	E36, E46			110 Nm
	E83, E85, E86	M12 x 1.5 10.9		100 Nm
13AZ Trailing arm console to body	E36, E46, E83, E85, E86			77 Nm
14AZ Upper control arm to rear axle carrier	E31	M12 x 1.5	tighten in normal position	77 Nm
	E36	M12 10.9	tighten in normal position Always replace antifatigue bolts with combination bolts and washers, see	77 Nm
	E38, E39, E52		tighten in normal position	110 Nm
	E52		tighten in normal position	110 Nm
	E46, E83, E85, E86		tighten in normal position	77 Nm
	E53, E60, E61, E63, E64		Replace nut tighten in normal position	100 Nm
	E65, E66, E67		Replace nut tighten in normal position	
			Jointing torque	100 Nm
			Torque angle	90 °
15AZ Lower control arm to rear axle carrier	E36	M12 10.9	tighten in normal position Always replace antifatigue bolts with combination bolts and washers, see	77 Nm
	E46, E83, E85, E86		tighten in normal position	77 Nm
16AZ Support bracket on body	E21 / E30			28 Nm
17AZ Compression strut on body	E46, E83	M8 8.8		21 Nm
	E30, E32, E34, E36, E85, E86	M8 10.9		30 Nm
	E60, E61, E63, E64	M10 10.9		48 Nm

	E65, E66, E67	M10 10.9		38 Nm
18AZ Auxiliary control arm to trailing arm and rear axle carrier	E32, E34	M14 x 1.5	tighten in normal position	127 Nm
19AZ Additional strut on rear axle carrier	E32, E34	M12 x 1.5		110 Nm
20AZ Swinging arm to rear axle support	E38	Front	tighten in normal position	60 Nm
	E39	Front	tighten in normal position	58 Nm
	E52	Front	tighten in normal position	105 Nm
	E53, E60, E61, E63, E64, E65, E66, E67	Front	Replace nut tighten in normal position	100 Nm
	E38	Rear	tighten in normal position	130 Nm
	E39	Rear M12	tighten in normal position	115 Nm
	E39 / Touring, M5	Rear M14	tighten in normal position	174 Nm
	E52	Rear M14	tighten in normal position	160 Nm
	E53, E60, E61, E63, E64, E65, E66, E67	Rear M14	Replace nut tighten in normal position	165 Nm
21AZ Integral link on front wheel carrier	E38, E39, E52, E53		tighten in normal position	105 Nm
	E60, E61, E63, E64, E65, E66, E67		tighten in normal position	100 Nm
22AZ Screw connection, swinging arm, integral link, wheel carrier	E38		tighten in normal position	236 Nm
	E39, E52		Replace nut tighten in normal position	256 Nm
	E53		Replace nut tighten in normal position	250 Nm
	E60, E61, E63, E64, E65, E66, E67		Replace nut tighten in normal position	240 Nm
23AZ V-strut to tension strut / body	E46 / M3 / M3 CSL		Replace screws	
			Jointing torque	59 Nm
			Torque angle	90 °
24AZ Upper control arm to trailing arm	E85, E86	M12 x 1.5 8.8	Replace nut	100 Nm
	E83	M12 x 1.5	Replace nut	106 Nm

25AZ Lower control arm to trailing arm	E85, E86	M12 x 1.5 10.9	Replace nut tighten in normal position	77 Nm
	E83	M12 x 1.5 10.9	Replace nut tighten in normal position	100 Nm
26AZ Tension strut to compression strut / body	E83	M10		60 Nm
27AZ Heat shield to compression strut	E83	M6		5 Nm
28AZ Heat shield to compression strut	E65, E66, E67	M8		19 Nm

33 AXLE MOUNTING

33 33 REAR AXLE SUSPENSION

REAR AXLE SUSPENSION - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Rubber mount to rear axle carrier	E21, E23			95 Nm
	E21, E24, E28			40 Nm
2AZ Stud to body	E36			120 Nm
	E36 / Z3 / Compact			127 Nm
	E46, E85, E86			90 Nm
3AZ Rear axle carrier with rubber mounts to body	E36, E46, E83, E85, E86	M12 x 1.5		77 Nm
	E36	M14 x 1.5		140 Nm
	E38			127 Nm
	E39, E52, E53			163 Nm
	E60, E61, E63, E64, E65, E66, E67			165 Nm
4AZ Rear rubber mount to body	E32, E34	M10	Thread free from oil and grease Secure with Loctite No. 270	45 Nm
5AZ Rear axle carrier to rear rubber mount	E32, E34	M12		77 Nm
6AZ Fixing, rubber mount/rear axle carrier, front	E67			8 Nm

41 WHEEL BEARINGS

33 41 WHEEL BEARINGS

WHEEL BEARINGS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Rear axle shaft to drive flange	E12, E21, E23, E24	Collar nut yellow chromated	Replace collar nut	435 Nm
	E28	Collar nut waxed white M22	Replace collar nut	190 Nm
	E23, E24, E28, E32, E34	Collar nut waxed white M27	Replace collar nut	250 Nm
2AZ Bearing unit on wheel carrier	E39		Replace screws	
			Jointing torque	30 Nm
			Torque angle	90 °
	E60		Replace screws	
			Jointing torque	30 Nm
			Torque angle	110 °
	E53, E61, E63, E64, E65, E66			100 Nm
3AZ Drive flange to axle shaft	E53, E60, E61, E63, E64, E65, E66, E67	M27	Replacing collar nut and lightly oil contact face	420 Nm
	E31, E36, E38, E39, E46, E52, E83, E85, E86	M27	Replacing collar nut and lightly oil contact face	300 Nm
	E36, E46, E85, E86	M24	Replacing collar nut and lightly oil contact face	250 Nm
	E30, E36	M22	Replacing collar nut and lightly oil contact face	200 Nm

52 SHOCK ABSORBER

33 52 SHOCK ABSORBERS

SHOCK ABSORBERS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Shock absorber to trailing arm/wheel carrier/swinging arm/support arm/control arm (tighten in normal position)	E12, E23, E24, E28, E32, E34, E38, E52			127 Nm
	E21			54 Nm
	E30, E36/7, E36/5			77 Nm
	E31			115 Nm
	E36, E46, E83, E85, E86	M12		100 Nm

	E39, E53	M14	Replace nut	127 Nm
	E60, E61, E63, E64, E65, E66	M14	Replace screw	165 Nm
	E67	M16	Replace screw	250 Nm
2AZ Shock absorber piston rod on thrust bearing	E21, E30			15 Nm
	E23, E24, E28, E34			25 Nm
	E36, E46, E83	M10	Replace nut	14 Nm
	E38, E39, E52	M10	Replace nut	23 Nm
	E38, E39	M14	Replace nut	27 Nm
	E53, E60, E63, E64, E65, E66, E67	M12	Replace nut	27 Nm
	E61	M12	Replace nut	28 Nm
	E85, E86	M10 x 1	Replace nut	13 Nm
3AZ Support on body/rear axle carrier	E36, E38	M8	Replace nut	24 Nm
	E39	Nut and bolt yellow chrome-plated	Replace nut	24 Nm
	E39	Nut and bolt silver-grey	Replace nut	28 Nm
	E46, E52, E60, E63, E64, E65, E66, E67	M8	Replace nuts	28 Nm
	E53	M10	Replace nuts	56 Nm
	E83, E85 / S54, E86 / S54	M8	Replace nuts	24 Nm
	E85 / except S54, E86 / except S54	M8	Replace nuts	27 Nm

55 STABILIZER BAR

33 55 STABILIZER BAR

STABILIZER BAR - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Stabilizer to trailing arm	E30, E31, E36 / Z3 / Compact	M8	tighten in normal position	22 Nm
	E31	M10	tighten in normal position	42 Nm
2AZ Stabilizer link on anti-roll bar/swinging arm	E38			42 Nm

	E39, E52			65 Nm
	E53			100 Nm
	E60, E61, E63, E64	M10		65 Nm
	E65, E66, E67	M10		58 Nm
	E60, E61, E63, E64, E65, E66, E67	M12		100 Nm
3AZ Retaining bracket, stabilizer bar to rear axle support	E46, E52, E85			22 Nm
	E53			19 Nm
	E60, E61, E63, E64	M8		28 Nm
	E65, E66, E67	M10		60 Nm
	E83	M8		21 Nm
4AZ Stabilizer link to bracket	E46, E85, E86	M8	Replace nut	22 Nm
5AZ Bracket stabilizer link to upper control arm	E46, E85, E86	M8	Replace nuts	22 Nm
6AZ Vibration damper to right stabilizer retaining bracket	E61	M12		100 Nm
7AZ Stabilizer link to stabilizer bar / upper control arm	E83	M10	Replace nuts	65 Nm

KINEMATIC DIAGNOSIS SYSTEM AND ENVIRONMENT

BMW KDS (Beissbarth)

G03179502

Fig. 1: Identifying Kinematic Diagnosis System And Environment
Courtesy of BMW OF NORTH AMERICA, INC.

1. FOREWORD

1.1 Objectives

Wheel alignment has become an increasingly complex subject. The aim of this BMW Service Technology bulletin, therefore, is to achieve several objectives:

- Creation of guidelines for working with the BMW Kinematic Diagnosis System (KDS).
- Familiarization with wheel alignment technology for current vehicles and clarifying any questions which

arise in this connection.

- Transparency and clarification of different terms.
- Clarification of the causes of errors in the past, such that they can be avoided after reading this document.
- Creation of conditions for dealing safely with the BMW KDS.

1.2 Further development of the BMW Kinematic Diagnosis System

- The BMW Kinematic Diagnosis System is an integrated part of automotive system concepts. It ensures that work is carried out in a particularly rational manner which is appropriate for BMW requirements, such that you can also be certain of being prepared for future technological developments. As far as precision and performance in wheel alignment and tuning is concerned, BMW, together with leading manufacturers, has made the best of what is technically feasible: the BMW Kinematic Diagnosis System.
- The BMW Kinematic Diagnosis System manufactured by Beissbarth is more than just the further development of conventional wheel alignment equipment. It sets new standards in precision, performance, speed and handling. It is a guarantor for the perfection which BMW service customers rely on.
- Ride comfort, road safety and tyre wear depend to a large extent on the perfect interplay of the vehicle's kinematic functions. BMW is constantly launching new generations of chassis which are even better than their predecessors. This is why there are fewer kinematics system adjusting points and narrower tolerances when measuring and tuning the chassis.
- With the use of the multi-link rear suspension and the E36, the electronic wheel alignment devices are no longer suitable for BMW wheel alignment purposes. This applies to both the measuring procedure and measuring precision. The generation of equipment which was approved with the E36 series still fulfils all the requirements placed on a modern wheel alignment device, including the use of the latest computer technology.
- Only BMW Kinematic Diagnosis Systems manufactured by Beissarh and Bosch may be used for wheel alignment.

1.3 Technical Data

G03179503

Fig. 2: Technical Data Display

Courtesy of BMW OF NORTH AMERICA, INC.

BMW KINEMATIC DIAGNOSIS SYSTEM - TECHNICAL DATA SPECIFICATIONS

1)	Display	- 17" graphic screen with high-resolution graphics (640x480 pixels with 256 colours)
2)	On-screen text	- In the appropriate national language
3)	Wheel dimensions	- 12"...20"
4)	Vehicle memory locations	- Unlimited
5)	Rotating plates	- Load bearing capacity 1000 kg, angle of rotation +/- 360°, 450 x 450 x 50 mm (L x W x H), sliding range +/- 50 mm, weight 18 kg
6)	Sliding plates	- Loadbearing capacity 1000 kg, angle of rotation +/- 10°, 450x450 x 50mm (L x W x H)
7)	Electrical connection	- 100...115 V/220...240V 50/60 Hz, 0.5 kW (other connections on request)

1.4 Scope Of Delivery

1 - PC display device with graphic screen, graphical tablet, small or large equipment cabinet including automatic charging station, DIN A4 dot matrix printer

4 - Measuring sensors with CCD camera technology and infrared data transmission with built-in power supply

1 - Cable set (comprising 4 cables)

1 - Brake clamping device

1 - Steering lock device

2 - Electronic precision rotating plates with integrated sensor without access ramps

2 - Sliding plates without access ramps

4 - BMW quick-clamping units, comprising a P8-68 locating bell and P267 01 quick-acting clamp including coated holding claws

1 - Operating instructions for BMW KDS (8 languages)

1 BMW software and the BMW vehicle set-point data with setting screens as well as text for the measurement preparations

1.5 Accessories Required

2 Locating rods for positioning the vehicle

1 Set of sand bags for the prescribed loading

1.6 Accessories recommended

4 - Quick-clamping units

2 - Sets of access ramps

1 - Remote control display

1 - Trolley (for ballast bags, rotating and sliding plates and 4 quick-acting clamps)

2. MEASURING OPTIONS USING THE BMW KINEMATIC DIAGNOSIS SYSTEM

2.1 Front Axle

- Toe-in (single and total toe-in in relation to the geometrical drive axis)
- Camber (with steering wheel pointing straight ahead)
- Wheel displacement (in relation to the left-hand front wheel)
- Castor, kingpin inclination and toe-differential angle

2.2 Rear Axle

- Toe-in (single and total toe-in in relation to the longitudinal centre plane of the vehicle -> previously called symmetrical axis)
- Geometrical drive axis
- Camber

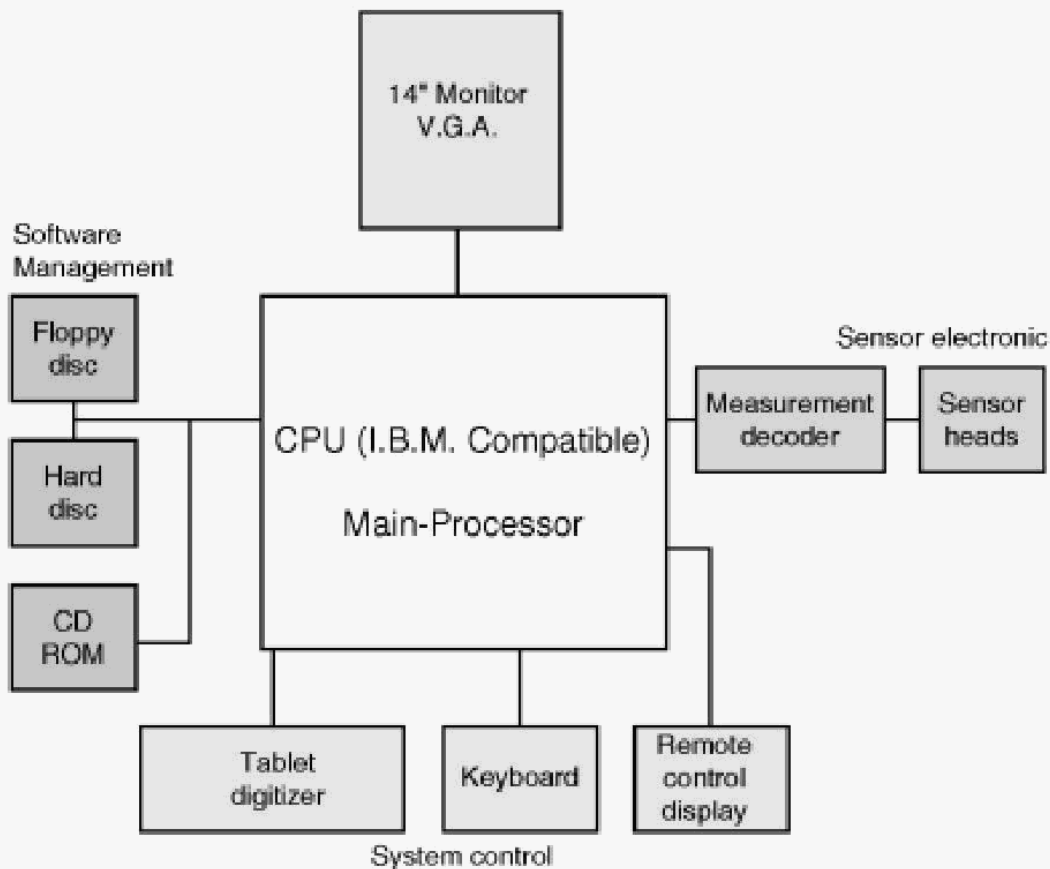

2.3 Other Measuring Options

- Rear Wheel Displacement
- Wheelbase Difference
- Lateral Displacement On Right
- Lateral Displacement On Left
- Track Difference
- Axial Displacement

3. SYSTEM DESCRIPTION

3.1 BMW Kinematic Diagnosis System 1, Based On The Beissbarth ML4000

microline 4000 system concept

G03179504

Fig. 3: BMW Kinematic Diagnosis System Concept Chart
Courtesy of BMW OF NORTH AMERICA, INC.

The KDS 1 is available in two different designs at no extra charge:

1. Mobile Workstation

G03179505

Fig. 4: Identifying Mobile Workstation
Courtesy of BMW OF NORTH AMERICA, INC.

2. Mobile Compact Cabinet

G03179506

Fig. 5: Identifying Mobile Compact Cabinet
Courtesy of BMW OF NORTH AMERICA, INC.

The larger workstation offers a small storage area for accessories, whilst the compact cabinet is mobile and ideal for restricted working areas. Both variants can be supplied as a cableless measuring system (infrared). From the point of view of measuring technology, there is only a difference in the handling and equipping of the system. For both designs, the four measuring sensors are stored in integrated inserts with rechargeable battery charging points. When automatically charged over night, the measuring sensor batteries provide enough power for 10 hours of continuous use.

3.2 Computer

The KDS 1 system comprises tested and reliable industrial components. The computer is an IBM-compatible, 32-bit Intel processor with CD ROM drive to the industry standard.

G03179507

Fig. 6: Identifying System Comprises Tested And Reliable Industrial Components
Courtesy of BMW OF NORTH AMERICA, INC.

3.3 Graphical Tablet

All functions are shown in graphical form on a "pictogram" panel. The panel is protected by a plexiglass cover. It can easily be replaced if more extensive design modifications are necessary. The operator interface has no membrane and is thus protected against damage. The main functions are activated by clicking the icon with the digital pen.

G03179508

Fig. 7: Identifying Graphical Tablet

Courtesy of BMW OF NORTH AMERICA, INC.

3.4 Equipment Cabinet

The PC with graphic monitor and removable operating panel, supports for the measuring sensors, the remote control and the A4 printer are integrated into the workstation. The charging station is located in the cabinet and can also be connected to the measuring sensors and the remote control using the plug-in cables (operating while simultaneously charging the batteries).

G03179509

Fig. 8: Identifying Equipment Cabinet
Courtesy of BMW OF NORTH AMERICA, INC.

3.5 Remote Display

A cableless remote display can be supplied on request. The remote control keys are only active during measuring and adjustment (not for customer data input, or if selecting a vehicle or editing the setpoint data etc.). The following displays are supported by the remote control:

- Measured value with setpoint/actual comparison and tolerance bar
- Steering graphics for steering routines
- Live overview of the track/camber values with a setpoint/actual comparison
- Rim run-out compensation

G03179510

Fig. 9: Identifying Remote Display
Courtesy of BMW OF NORTH AMERICA, INC.

3.6 Measuring Sensors With CCD Camera

The measuring sensors are each equipped for automatic measurement with two CCD cameras and their own processor for the cableless infrared transmission of data with integrated batteries. Benefits:

- No temperature deviation
- Very high measuring resolution (the track
- Single track range of more than +/- 9 degrees for the constant display of toe-in when changing the tie-rod ends
- Exact system accuracy, i.e. when carrying out measurements at the vehicle following rim run-out compensation, the toe-in and camber measurements are accurate to 2 angular minutes

G03179511

Fig. 10: Measuring Sensors With CCD Camera
Courtesy of BMW OF NORTH AMERICA, INC.

3.7 BMW Quick-Acting Clamp

BMW quick-acting clamp for holding the measuring sensors precisely in position and measuring without rim run-out compensation.

NOTE: Any existing quick-acting clamps, e.g. from older F1600s or ML-3000s, must not be used on the BMW KDS.

G03179512

Fig. 11: Measuring BMW Quick-Acting Clamp For Holding
Courtesy of BMW OF NORTH AMERICA, INC.

3.8 Rotating/Sliding Plates

- Electronic precision rotating plates for the front wheels with integrated sensor (360 degree measuring range)
- Stable sliding plates for the rear wheels with a swivelling/rotating top plate
- Accessories: Cover hood for aluminum rotating plates

G03179513

Fig. 12: Identifying Rotating/Sliding Plates
Courtesy of BMW OF NORTH AMERICA, INC.

3.9 Sensor Pins

- A new BMW light alloy wheel (styling no. 18) has been available as optional equipment from April 1993. When measurements are being made on vehicles with these wheels, new sensor pins are required for the quick-acting clamps of the recommended wheel alignment equipment.
- The new sensor pins are included in the scope of supply for new deliveries of KDS 1 (order number: BS 90 19 11).

G03179514

Fig. 13: Identifying Sensor Pins

Courtesy of BMW OF NORTH AMERICA, INC.

3.10 Spoiler Adapter

- In the case of vehicles with very low spoilers, the sensor beam may be broken by the spoiler between the measuring sensors. This primarily occurs in front of the front axle.
- The spoiler adapter is used here as a connecting element between the measuring equipment clamp and the measuring sensor. Thanks to the adapter, the sensors are placed 50 mm lower, thus allowing the sensor beam to move freely below the spoiler.

G03179515

Fig. 14: Identifying Spoiler Adapter
Courtesy of BMW OF NORTH AMERICA, INC.

3.11 Quick-Clamping Units

- Quick-clamping units for wheel alignment on non-BMW vehicles with rim run-out compensation.
- Rims without sensors boreholes (rims for BMW vehicles from other manufacturers)

G03179516

Fig. 15: Identifying Quick-Clamping Units For Wheel Alignment Non-BMW
Courtesy of BMW OF NORTH AMERICA, INC.

3.12 Retainers

- The most varied clamping options for the measuring equipment are possible thanks to the versatile retainers and the rubber-coated thrust pieces, even on exotic light-alloy rims.

Fig. 16: Identifying Retainers

Courtesy of BMW OF NORTH AMERICA, INC.

4. WORKSTATION

4.1 Environment

All lifting platforms currently recommended by BMW (see Workshop Equipment Planning documentation, Issue 11) for wheel alignment meet the requirements for the BMW KDS.

No particular requirements have to be met in respect of the location at which the BMW KDS is used. The measuring device can be installed over working pits or on lifting platforms.

Requirements:

- Wheel alignment pits
- Pillar-type lifts with set-down device
- 2 plunger-type lifting platforms with set-down device
- Repair stands with set-down device
- One measuring area (approx. 4.5 m x 7.0 m).
- The rotating plates must be pinned to the platform

The support surfaces for the rotating and sliding plates may only display the following maximum height difference:

- from left to right +/- 0.5 mm
- from front to back +/- 1.0 mm
- diagonally +/- 1.0 mm.

G03179518

Fig. 17: Cutaway View Of For Rotating And Sliding Plates
 Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: A difference in the height of the rotary plates of +/- 2 mm from left to right results in a measuring error of 4.8° in the camber.
 As a comparison: The camber tolerance on the E36 is +/- 10'. The tyre tread difference or varying tyre pressure cause measuring errors of the same magnitude.

4.2 Preconditions For Alignment

When carrying out the wheel alignment, the front and rear wheels must be centred on the rotating and sliding plates in order that all wheel suspensions remain free of tension during the steering routine and adjustment work. As a result, the rotating and sliding plates for the relevant wheel bases and track widths of the vehicle to be aligned must be moved.

4.3 Measuring Tolerance

All measuring tolerances are system tolerances. This means that the sum of all individual tolerances gives the value shown in the example. Example of camber: Quick-acting clamp + measuring sensor + computer = 1' at a measuring range of +/- 3° (all BMW vehicles are within this measuring range).

4.4 Levelling The Measuring Station

The manufacturers of the BMW KDS (Beissbarth/Bosch) are able to measure the measuring area to the required accuracy using levelling devices. Any "normal" water level is not suitable for this. Lifting platforms must be levelled under load so that the uneven deflection in the travel rails is taken into account.

IMPORTANT: Adjustment work for the lifting platform concerned must be executed by a specialist (manufacturer's after-sales service).

5. CHASSIS-RELATED TERMS

5.1 Toe-Differential Angle

Description:

- The toe-differential angle (a) is the angular position of the internal wheel on the curve in relation to the external wheel on the curve when driving round bends. The steering is designed such that the angular position of the wheels in relation to each other changes as the steering angle increases.
- In ideal cases, the wheel axes meet at point D in any steering position (except for straight ahead).

Fig. 18: Identifying Toe-Differential Angle
Courtesy of BMW OF NORTH AMERICA, INC.

5.2 Camber

- The camber is the angle of inclination of the wheel in relation to the vertical.

G03179520

Fig. 19: Identifying Camber Angle

Courtesy of BMW OF NORTH AMERICA, INC.

5.3 Toe-In

- The toe-in is the reduction in the distance between the front of the wheels and the rear. The toe-in prevents the wheels from moving apart whilst driving (wobbling and grinding).

Fig. 20: Identifying Toe-In Angle

Courtesy of BMW OF NORTH AMERICA, INC.

5.4 Caster

- The castor is the kingpin angle seen from the side in the opposite direction of travel. The line through the centre of the spring strut mount and control arm ball joint corresponds to the kingpin.

G03179522

Fig. 21: Identifying Castor Angle

Courtesy of BMW OF NORTH AMERICA, INC.

5.5 Geometrical Drive Axis/Symmetrical Axis

- (1) The geometrical drive axis is the line bisecting the angle of the overall rear wheel toe. The measurements of the front wheels relate to this axis.
- (2) The symmetrical axis represents the centre line through the front and rear axes.

Fig. 22: Identifying Geometrical Drive Axis Angle
Courtesy of BMW OF NORTH AMERICA, INC.

5.6 Wheel Displacement Angle

- The wheel displacement angle is the angular deviation of the connecting line of the wheel contact points in relation to a line running at 90° to the geometrical drive axis. The wheel displacement angle is positive if the right-hand wheel is displaced to the front, and is negative if it is displaced to the rear.

Fig. 23: Identifying Wheel Displacement Angle
Courtesy of BMW OF NORTH AMERICA, INC.

5.7 Kingpin Offset

- The kingpin offset is the distance from the centre of the wheel contact point to the contact point of the kingpin extrapolation.

G03179525

Fig. 24: Identifying Kingpin Offset Angle
 Courtesy of BMW OF NORTH AMERICA, INC.

6. WHEEL SUSPENSION

Those parts which connect the wheel to the mostly load-bearing floor elements of the bodywork and guide it in the required direction belong to the wheel suspension. They are connected by axles or other comparable structures and guided by the arms. The wheel suspension plays a decisive role in the handling characteristics of a vehicle. Two main groups have to be distinguished: 1. Rigid axle suspension and 2. Independent wheel suspension.

6.1 Rigid Axle Suspension

RIGID AXLE SUSPENSION SPECIFICATIONS

Description	Advantages	Disadvantages
The rigid axle suspension has a rigid connection between both wheels or wheel pairs. Any change in one wheel is more or less transferred to the other. It is now only fitted as a rear axle, if at all. However it is frequently used for lorries or busses.	In the event of deflection taking place, there are no changes to the camber or wheel toe. This means: less tyre wear and good track stability.	Non-driven rear axles may also acquire negative camber as well as increasing tyre lateral guidance, thus increasing tyre wear.

6.2 Independent Wheel Suspension

INDEPENDENT WHEEL SUSPENSION DESCRIPTION

Description	Advantages	Disadvantages
State-of-the-art individual wheel suspension is available on BMW vehicles on the front and rear axles. This development has its cause in mass inertia, as a reduction in the non-suspended mass improves wheel and ground contact, and the wheel stays better on the road. Control arms and trailing arms, which have to absorb high longitudinal and lateral forces to some extent, are required for guiding independently suspended wheels.	Wheels suspended independently from each other have no mutual influence on each other.	Depending on the type, changes may occur in the camber, wheel toe, track width, castor and wheelbase.

7. WHEEL ALIGNMENT PROCEDURE

7.1 Measuring Options

An overview of all measuring options and values (VA = front axle, HA = rear axle) is shown below.

MEASURING OPTIONS SPECIFICATIONS

Measuring options	Measuring accuracy	In measuring range	Total measuring range
Total wheel toe (VA + HA)	+/- 2'	+/-2°	+/-18°
Single wheel toe (VA + HA)	+/-2'	+/-2°	+/-9°
Camber (VA + HA)	+/-1'	+/-3°	+/-10°
Wheel displacement (VA)	+/-2'	+/-2°	+/-9°
Geometrical drive axis	+/-2'	+/-2°	+/-9°

Castor	+/-4'	+/-18°	+/-22°
Kingpin inclination	+/-4'	+/-18°	+/-22°
Toe-differential angle	+/-4'	+/-20°	+/-20°
Maximum steering angle (VA)	+/-4'	+/-60°	+/-300°
Maximum steering angle (HA)	+/-4'	+/-9°	+/-9°
Castor correction range	+/-4'	+/-7°	+/-10°

NOTE: The measuring accuracy details only apply when using the precision rotating and sliding plates as well as the BMW quick-acting clamps.

7.2 Preparatory Work

Before commencing the measurement, preparatory work must be carried out at the measuring area and on the vehicle (see BMW KDS operating instructions). Preparatory work includes:

- Easy-running rotating and sliding plates
- Aligning the rotating and sliding plates in relation to the track width and wheelbase
- Centering the vehicle on the plates
- Applying the parking brake
- Removing the lock pins on the plates to prevent tension in the chassis under loading
- Checking the rim and tyre size, tread depth, tyre pressure, steering wheel play, wheel bearings and condition of suspension and shock absorbers
- Fastening the measuring equipment to the wheels
- Loading the vehicle according to BMW KDS specifications
- Rock the vehicle firmly with the brakes released to ensure a stable centre position
- Lock the service brake using the brake clamping device

7.3 Initial/Final Measurement

This measurement can be carried out as a program-guided measurement in the same way as any subsequent adjusting work and the final measurement. The sequence of the chassis measuring points to be called up is specified and controlled by the system software. The individual steps comprise:

- Driving straight ahead to correctly record the wheel toe and camber values for the rear axle
- Steering routine for recording the castor, kingpin inclination and toe-differential angle
- Recording the wheel toe and camber of the front axle (adjust the steering centre point in advance)
- Steering routine for measuring the maximum steering angle on the left/right
- Checking the overview of measured values with the setpoint and actual comparison of all measured values

7.4 Printing Out The Data

- Carry out all work in the same way as with the program-guided measurement.
- Before measuring the wheel toe and camber values for the rear axle, the steering must be in the "straight ahead" position to ensure that it is perfectly aligned in relation to the longitudinal centre plane of the vehicle.
- Before measuring the single wheel toe values on the front axle, the centre of steering must be established to ensure the correct position of the steering wheel.

8.2 System Settings

The following settings must only be entered or set once: language, display format, date/time, advertising text, remote control with display, rotating plate selection and printer settings. They remain stored.

9. BMW KINEMATIC DIAGNOSIS SYSTEM COMPARISON (BOSCH - BEISSBARTH)

BMW KINEMATIC DIAGNOSIS SYSTEM SPECIFICATIONS

Bosch		Beissbarth
Measured value recording	Infrared	CCD camera
Data transmission	Cable	Infrared / cable
Measuring sensor power supply	Cable	Battery/ cable
Remote control	Infrared	Infrared
Remote control with measured value display	Cable	Infrared
Setpoint data memory	Floppy disk	Hard disk
Measured value memory	Always the last vehicle measured	Unlimited vehicle memory
Operating system	--	MS-DOS
Languages	English and one language on request	EN, DE, NI, SV, IT, FR, SP (further languages can be called up)
Update	3.5" floppy disk	3.5" floppy disk using TIS/DIS
Monitor	20"	17"
Computer	--	Pentium
Disk drives	2 x floppy disk	1 x floppy, 1 x CD ROM

10. CONTROL MODIFICATION (MENU)

10.1 Remote Control With Display

The following steps show how the remote control with display is activated:

1. Call up the "Service" menu in special functions ("S" key)
2. Call up the "Remote control" sub-menu in the "Service" menu.
3. Select the "Remote control with display" item in the "Remote control" sub-menu - this configuration is retained.

IMPORTANT: In the case of equipment without remote control, this must be configured to "No remote control".

10.2 Brief Operating Instructions

1. Activate the remote control with the "ON" button (it may also be switched on during alignment). The title page will appear on the LCD.
2. Select "Straight ahead" of the "Initial measurement", "Adjustment work" or "Final measurement" at the measuring equipment cabinet. The steering graphics for "Straight ahead" will appear on the LCD.
3. Use the "Forward arrow" to change to the next measurement image. Display blocks will appear on the LCD with the designation of the measured value and tolerance bar with the measured value. If the measured value is within the tolerance range, it is shown in dark figures against a light background. If the measured value is outside the tolerance range, it will be shown in inverse video (light figures against a dark background).
4. By pressing the "F" key shortly, you can move alternately between the designation of the measured value and the setpoint value with the tolerance inside the display blocks.
5. You can scroll through the measured values using the "Forward arrow", "Backward arrow" and "Cancel" (red dot) keys. The function of these keys is identical to that of the keys on the graphics panel.
6. Even with "Free alignment", it is possible to scroll through the measured values in the same way as with "Program-guided alignment".
7. During measurement, the report print-out can be initiated using the "Printer" key. The remote control keys are only active during measurement and adjustment (not during customer data input, vehicle selection etc.).

10.3 Display Support

- Measured values with a setpoint/actual comparison and tolerance bar (setpoint figures can be displayed with the "F" key).
- Steering graphics for steering routines.
- Overview of measured values with current setpoint/actual comparison
- Rim run-out compensation.
- With all other functions (e.g. customer input), the title illustration appears on the LCD display.

If the data transmission from the remote control to the computer is interrupted, the remote control icon in the bottom right-hand corner of the screen changes colour from green to red and the illustration on the LCD display is shown inversely - black turns to white, white to black. This change does not take place in the title illustration. Once the line-of-sight connection has been re-established, the remote control continues to operate from the point of interruption in the program. A continuous visual connection during alignment is therefore not necessary.

- The "Hour glass" icon in the LCD display means: "Please wait".
- The "Battery" icon in the top right-hand corner of the LCD display means that the battery reserve has been reached.
- To switch off the remote control: press the "F" key for 5 seconds, then return it to its charging unit or

connect it to a charge cable. The title illustration will again appear as a charging check.

- If, during the measurement, the remote control has been placed back in the charging unit, it must be switched on again using the "ON" button.

11. UPDATING THE SOFTWARE/SETPOINT DATA

Floppy disks will no longer be sent to BMW partners who have acquired a "BMW KDS (Beissbarth/Bosch)". For cost-related reasons, you can create these disks yourself on the "DIS-tester" or on the "TIS/EPC server". The data for this is regularly updated on the TIS CD.

11.1 Requirements

- BMW KDS (Beissbarth/Bosch)
- TIS CD program status (Beissbarth): from CD 12/95
- EPC program status: from 12/95
- TIS CD program status (Bosch): from CD 08/97
- DIS program status: from V6.0
- 3.5" diskettes, 1.44 MB (Beissbarth 5 diskettes/Bosch 1 diskette)

11.2 Procedure (Beissbarth)

1. Go to the "Administration" screen
2. Select the KDS button
3. Select Beissbarth
4. Insert "Diskette 1" on request and confirm with "OK" (program diskette 1 of 2 is created, label it)
5. Insert "Diskette 2" on request and confirm with "OK" (program diskette 2 of 2 is created, label it)
6. Insert "Diskette 3" on request and confirm with "OK" (setpoint data diskette 1 of 3 is created, label it)
7. Insert "Diskette 4" on request and confirm with "OK" (setpoint data diskette 2 of 3 is created, label it)
8. Insert "Diskette 5" on request and confirm with "OK" (setpoint data diskette 3 of 3 is created, label it)
9. Perform update and/or setpoint data on the KDS in the usual manner with the diskettes which have just been created.

11.3 Procedure (Bosch)

1. Go to the "Administration" screen
2. Select the KDS button
3. Select Bosch
4. Label "Diskette 3.1", insert it into the drive on request and confirm with "OK" (2x) --> Setpoint data is copied to the diskettes.
5. Insert setpoint data diskette 3.1 into the 3.1 floppy disk drive, insert operating system diskette 3.0 into the 3.0 drive.
6. Switch on the machine in the usual manner.

IMPORTANT: When creating the KDS diskettes, all data on the diskettes used is overwritten.

NOTE: In the event of an error, a corresponding message is shown and the program is cancelled completely. The procedure must be run from the beginning again and all data on the diskette will be deleted. A new diskette may have to be used.

12. CREATING, COPYING AND EDITING SETPOINT DATA

12.1 Copying

- Press the "C" button and select the vehicle to be copied.
- Select the "**Edit setpoint data**" menu item from the special functions. Create a new vehicle in the usual manner. The setpoint values for the last vehicle selected will appear in the data input screen. Enter the data and save the data record.

12.2 Creating

- Press the "C" button and select the "**Edit setpoint data**" menu item from the special functions. Create a new vehicle in the usual manner. An empty data input screen will appear. Enter the data and save the data record.

12.3 Editing

- Factory-programmed setpoint data can neither be deleted nor modified. If this data does need to be modified, a new vehicle with modified setpoint data must be created. New vehicles created by the user are identified by a "+" in the selection menu. These vehicles can be deleted by the user using the "-" key or modified using the "<>" key. These keys only appear if vehicles have been entered by the user.

13. SPECIAL FUNCTIONS

13.1 Customer-Specific Printer Report Header

The sub-item "**Customer-specific text**" must be called up in the "**Special functions**" menu. An input screen will appear on the monitor. This input screen must be filled out with the name and address and stored with the "S" screen key. The text entered is inserted into the report header.

13.2 Adjusting Options

- Call up the "**Service**" menu in the special functions ("S" key).
- Select the "**Wheel toe adjustment**" item or the "**Camber adjustment**" item from the "**Adjustment**" sub-menu. The toe and camber adjustment program will guide the user step by step through the adjustment using text and images. The measuring deviation for each measuring sensor will be shown on the screen when the adjustment has been completed.
- You can store the adjustment values in the measuring sensor using the "**Store**" key or you can quit the program with the "**Red dot key**" without saving them (check). The adjustment values can be printed out.

13.3 Rotating Plate Test

- Call up the "**Service**" menu in the special functions ("**S**" key).
- Call up the "**Rotating plate**" item in the "**Service**" menu. Turn the left-hand and right-hand rotating plate and check the display on the screen. Important: The measuring range is +/- 306 degrees.

13.4 Viewing And Deleting Customer Entries From Database

- Call up the menu item "**Delete**" in the "**Database**" menu in the special functions. The data input screen will appear. Fill in the search fields with the data to be deleted.
- Use the "-" button to delete this data record. A new data record can then be highlighted and deleted with the digital pen.
- You can scroll through the entire database with the "**Arrow up**" and "**Arrow down**" keys.

14. MODIFICATIONS WITHIN PROGRAM

Further modifications were carried out within the program which only slightly change the program sequence but which optimise the alignment in respect of comfort and speed. This is described below:

- Optimisation of the rim run-out compensation in respect of speed.
- Optimisation of the steering routines: Highlighted values within the gate can still be corrected. The message "**Rotating plates not connected**" no longer causes the steering routine to be cancelled. Further measurements can be carried out after the rotating plates have been connected.
- Standardisation of screen colours with the colours on the tablet.
- Addition of texts in several foreign languages.
- Elimination of program-related and cosmetic faults.
- Electronic water level.
- Omission of kingpin inclination measurement.

15. FAULTS

15.1 Tyre Faults

TYRE FAULTS SPECIFICATIONS

Fault	Effect
1) Wheel toe, camber, toe-differential angle and castor not correct	1) Severe tyre squeaking even at relatively low speeds
2) Excessive toe-in and excessive positive camber	2) Tyres are worn down on one outside edge in the longitudinal direction
3) Excessive negative camber	3) Tyre wear on inside edge
4) Worn front-axle suspension on front-wheel-drive vehicles	4) Increased noise / Vehicle pulls on one side when accelerating
5) Incorrect wheel alignment	5) Wheels scrubbing / Tyre surface shows feathering in the tread

6) Play in the suspension due to mechanical parts (suspension, steering)	6) Washout / Wobbling of front wheels
7) Tyre pressure too low	7) Outside tyre surface wear

15.2 Front Axle Faults

FRONT AXLE FAULTS SPECIFICATIONS

Fault	Cause	Remedy
1. Toe deviation	<ul style="list-style-type: none"> a. Vehicle not in normal position b. Tie rod(s) bent c. Tie rod ball joints worn d. Rubber mount in control arm defective 	<ul style="list-style-type: none"> a. Correct height level b. Replace tie rod(s) c. Replace tie rod(s) d. Replace control arm
2. Camber deviation: The camber is fixed during the design stage and cannot be adjusted.	<ul style="list-style-type: none"> a. Rubber mount in control arm defective b. Control arm deformed c. Spring strut deformed d. Traction strut worn e. Spring deflection too great f. Front axle carrier deformed g. Spring strut mount deformed h. Distortion in the floor assembly (engine bracket) 	<ul style="list-style-type: none"> a. Replace control arm b. Replace control arm c. Replace spring strut d. Replace control arm e. Replace coil spring, height level f. Replace front axle carrier g. Repair forward structure h. Repair body
3. Castor deviation: The castor is fixed during the design stage and cannot be adjusted.	<ul style="list-style-type: none"> a. Rubber mount for tension / traction strut defective b. Tension / traction strut deformed c. Control arm deformed d. Spring strut deformed e. Wheelhouse deformed (spring strut mount) f. Distortion in the floor assembly (engine bracket) 	<ul style="list-style-type: none"> a. Replace rubber mount b. Replace tension / traction strut c. Replace control arm d. Replace spring strut e. Repair forward structure f. Repair body

4. Deviation from the geometrical drive axis	<p>Requirement: Total wheel toe is correct</p> <p>a. Distortion in the floor assembly</p>	<p>a. Repair body</p>

Further details on the "Kinematic Diagnosis System" can be found in the operating instructions for the BMW KDS (Beissbarth/Bosch).

Functional and system descriptions are not subject to change. Parts availability and immediate ordering availability cannot be derived from this information. The specialist departments will be providing further details at the relevant time.

RUNFLAT INDICATOR

All models

G03179527

Fig. 26: Identifying Runflat Indicator
Courtesy of BMW OF NORTH AMERICA, INC.

INTRODUCTION

The Run Flat Indicator (RPA) monitors the tyre pressure throughout the journey.

The entire vehicle weight is carried by the air pressure in the tyres. If the pressure in one of the tyres should drop, the tyre will gradually "cave in". The resulting flexing means that the defective tyre will quickly receive additional damage. The tyre could burst.

Some 80 % of all flat tyres are caused by small holes (e.g. caused by nails). The holes result in a gradual loss of pressure in the affected tyre. Many "tyre blowouts" can be traced back to preliminary damage caused by a gradual loss of pressure.

A gradual loss of pressure in one tyre may remain unnoticed for a long time. The lack of pressure only makes itself clearly felt when driving when the tyre is almost completely empty.

As tyre pressure drops, the radius of the wheel and with it the tyre's rolling circumference will also decrease. The upshot is that the wheel speed of the affected tyre is increased.

The RPA records the wheel speeds using the wheel-speed sensors of the Dynamic Stability Control (DSC). The RPA compares the speeds of the individual wheels and computes an average speed. In this way the RPA is able to detect a loss of tyre pressure.

The RPA detects a drop in pressure below about 30 % +/- 10 % of the initial value. The RPA indicator and warning light indicates a drop in tyre pressure. The RPA will indicate this after just a short distance, as a rule after a few minutes, from a certain minimum speed (e.g. 25 km/h) up to the permissible top speed.

IMPORTANT: Responsibility resides with the driver at all times.

Check tyre pressures regularly, at least twice a month and before embarking on lengthy journeys.

During initialisation, the set tyre pressure is taken as the initial value for the current set of tyres.

If all 4 tyres lose pressure at the same rate, the wheel speeds will also change at the same rate. The RPA is unable to detect a uniform drop in pressure in all tyres (e.g. due to diffusion = natural loss of air from all 4 tyres)

IMPORTANT: Correct function of the Run Flat Indicator is not guaranteed when the emergency wheel is fitted.

As the emergency wheel has a much smaller diameter, the correct operation of the RPA can no longer be guaranteed.

BRIEF DESCRIPTION OF COMPONENTS

The SMG system comprises the following key components:

4 Wheel Speed Sensors The wheel-speed sensors of the Dynamic Stability Control (DSC) measure the wheel speeds of the individual wheels.

RPA button (E46, E53, E83, E85) The RPA button is only needed for initializing the PRA.

(RPA initialisation means "teaching the system the tyre pressures".

CID: Central Information Display Vehicles that are equipped with CID are initialized using the CID.

On-board computer button and rocker switch on turn-signal/main-beam switch (E87, E90, E91) Initialisation is performed on the LCD display, using the BC button and the rocker switch on the turn-signal/main-beam switch. The on-board computer functions are selected with the rocker switch.

The RPA software is in the following control units, depending on model series:

- **RPA Control Unit** (E46 all-wheel drive)

The E46 All-wheel drive has a separate RPA control unit.

The 4 wheel-speed sensors measure the wheel speeds. The DSC control unit sends the signals through 4 direct wires to the RPA control unit.

Alternatively

- **DSC control unit with additional software for Run Flat Indicator** (E46, E53, E60, E61, E63, E64, E83, E85, E87, E90, E91)

With DSC Mk60 and DSC 8, the RPA is integrated into the DSC control unit through additional software.

Alternatively

- **CIM: Chassis integration module** (E65, E66)

The CIM controls:

- Servotronic
- Steering column adjustment
- Run Flat Indicator (RPA)

The following control units are involved in the functions of the Run Flat Indicator:

- **CAS: Car Access System** E60, E61, E63, E64, E65, E66, E87, E90, E91

The CAS control unit provides input signals relating to terminal status (e.g. terminal 15 ON).

- **GM: Basic Module** E46, E53, E83, E85

The general module provides input signals relating to terminal status (e.g. terminal 15 ON).

- **JBE: Junction Box Electronics** E87, E90, E91

The JBE is the data interface (= gateway) between the K-CAN and the PT-CAN. (K-CAN stands for "Body Controller Area Network"; PT-CAN stands for "Powertrain Controller Area Network") The junction box consists of the junction-box electronics and the electrical distribution centre.

- **KGM: Body-Gateway Module** E60, E61, E63, E64 from 09/2005

The body-gateway module replaces the safety and gateway module (SGM). The KGM forms the data interface (= gateway) between the K-CAN and the PT-CAN.

- **M-ASK/CCC: Multi-Audio System Controller/Car Communication Computer** The M-ASK/CCC will emit an acoustic warning through the loudspeakers if tyre pressure drops. (On vehicles without M-ASK or CCC, the instrument cluster will emit the warning.)
- **SGM: Safety and gateway module** E60, E61, E63, E64 up to 09/2005 E65, E66 from 03/2004

The SGM is the data interface (= gateway) between the K-CAN, bytflight and the PT-CAN.

- **SZL: Steering Column Switch Cluster** E87, E90, E91

The signals from the on-board computer button and from the rocker switch are recorded and processed in the SZL. The data are transmitted to the instrument cluster through a direct wire (on-board computer).

- **ZGM: Central Gateway Module** E65, E66 until 03/2004

The ZGM forms the data interface (= gateway) between the K-CAN and the PT-CAN.

- **KOMBI and CID: Instrument Cluster and Central Information Display** A fault in the RPA or drop in tyre pressure will be indicated by the RPA indicator and warning light in instrument cluster. At the same time, the symbol will light up in the LC display.

Faults registered by the RPA are indicated as follows by the RPA indicator and warning light (for variations, please refer to national version):

- The RPA indicator and warning light lights up:
 - **Red (with acoustic signal):** Drop in tyre pressure more than approx. 30 % +/- 10 %. Driving safety is no longer guaranteed.
 - **Yellow:** RPA failed

Information about the Check-Control message can be called up in the CID (CID is fitted depending on the vehicle's equipment).

RPA Indicator And Warning Lights And Central Information Display

Installation Location

The Run Flat Indicator (RPA) has the following displays in the instrument cluster:

- RPA Indicator And Warning Light
- Symbol In LC Display

G03179527

Fig. 27: Identifying Runflat Indicator (E83 Shown)
Courtesy of BMW OF NORTH AMERICA, INC.

Item	Description	Item	Description
1	Symbol for check control message (yellow or red) on E60	2	"BMW Service" menu in the Central Information Display (CID)
3	Check control message in the Central Information Display (CID)		

G00313240

Fig. 28: Identifying RPA Warning In Central Information Display
 Courtesy of BMW OF NORTH AMERICA, INC.

How It Works RPA fault is displayed as follows:

- Via the RPA indicator and warning light The RPA indicator and warning light lights up:
 - **Red (with acoustic signal):** Drop in tyre pressure more than approx. 30 % +/- 10 %. Driving safety is no longer guaranteed.
 - **Yellow:** The RPA has developed a fault.
- Indicator or symbol in LC display (yellow or red).
- Check control message in Central Information Display (CID) with additional information text.

If the RPA should fail, the following Check-Control messages are possible (for example):

RPA FAILURE MESSAGES & EXPLANATIONS

Check Control Message In CID Status Bar	Further Information
Flat tyre!	Flat tyre Stop the vehicle carefully.

	<p>Please refer to the Owner's Handbook for how to change a wheel.</p> <p>Tyres with emergency-running characteristics (RSC): The journey can be continued for a limited distance at speeds up to max. 80 km/h, please refer to the Owner's Handbook.</p> <p>Have the tyres checked by the nearest BMW Service</p>
Run Flat Indicator failure!	<p>Run Flat Indicator</p> <p>Run Flat Indicator failed Flat tyres cannot be detected.</p> <p>Have the problem checked by BMW Service as soon as possible.</p>

SYSTEM FUNCTIONS

The Run Flat Indicator (RPA) comprises the following functions:

- Self-test
- Initialisation
- Detects drop in tyre pressure
- Visual and acoustic warning

Self-Test

The RPA performs a self-test when terminal 15 is switched ON. A fault in the RPA is indicated by the RPA indicator and warning light and by a symbol in the LCD display.

Initialisation

Initialisation is started manually (e.g. by pressing the RPA button). Then (after the journey has started), initialisation will run as a fully automatic calibration sequence. In other words, the circumference of individual tyres are recorded and evaluated.

To allow a drop in tyre pressure to be detected, the system considers different speed ranges and driving situations. Taking account of the driving situation means that the system has to be primed for each speed range individually.

From 09/2004 (starting with E87), these speed ranges and driving situations have been combined into 3 calibration ranges. This means greater clarity for output via the BMW diagnosis systems Group Tester One (GT1) and DISplus.

The initialisation phase lasts approx. 5 to 15 minutes for the individual speed ranges. The end of the initialisation phase is not indicated.

Detects Drop In Tyre Pressure

The RPA records the wheel speeds using the wheel-speed sensors from the DSC. The RPA compares the speeds of the individual wheels and computes an average speed. In this way the RPA is able to detect a loss of tyre pressure. (In the event of a tyre losing pressure, the tyre rolling circumference of the affected tyre is also reduced.)

Visual And Acoustic Warning

A drop in pressure in one tyre of approx. 30 % +/- 10 % from the initial value is indicated by the RPA indicator and warning light. In addition, an acoustic signal sounds.

Signal output: Depending on the model concerned, either via the instrument cluster or the multi-audio system controller (M-ASK)/Car Communication Computer (CCC).

NOTE: ***DSC malfunction***
The sensors used by the RPA are all monitored by the DSC. If DSC detect a fault, the RPA will also register a malfunction.

SPECIAL CONDITIONS FOR SYSTEM FUNCTION

The following operating conditions may cause a delay in the warning being given in the event of a drop in tyre pressure:

- Heavy braking
- Rapid acceleration
- High rate of lateral acceleration
- Cornering (in a tight corner)
- Vehicle speed dropping below a minimum speed (the RPA only responds when a certain minimum speed has been reached)
- Large difference in slip (between axles or between wheel on one side of vehicle)
- Initialisation not being completed in current speed range (see "Controls")
- Winter conditions

The following operating conditions may cause a delay in the warning being given in the event of a drop in tyre pressure:

- Driving with snow chains fitted

Driving with snow chains may impair the correct function of the RPA.

The system will work as normal again after the snow chains have been removed and the vehicle is driven for a few minutes. (Repeat initialisation not necessary.)

NOTE: **Do not perform initialisation when snow chains are fitted.**
Initialisation and snow chains will cause incorrect adaptation values.

- Trailer towing

Initialisation should be performed when a trailer with a weight greater than approx. 300 kg is being towed.

Repeat the initialisation process after detaching or unloading the trailer.

- Old/new tyres

NOTE: Only fit tyres with the same tread depth!

Avoid fitting tyres with greatly different tread depth (from approx. 2 millimetres) on one axle. The different diameters mean that the correct operation of the RPA is no longer guaranteed.

In the following cases, the system will **not emit a warning despite a drop in tyre pressure being detected** :

- The same amount of pressure is lost in 2 or more tyres.
- Drops in tyre pressures caused by diffusion and affecting all 4 tyres equally
- If a tyre is damaged with a sudden loss of all pressure (tyre blowout, warning is given too late)

OPERATION

The Run Flat Indicator (RPA) is initialized using the following control elements:

- RPA button
- On-board computer button on turn-signal/main-beam switch
- With iDrive in the Central Information Display (CID) with the controller

IMPORTANT: Always perform initialisation immediately after correcting the tyre pressure, especially if a tyre is changed or the wheels are interchanged. Only check tyre pressures when the tyres are cold.

Set the tyres to the correct pressure before performing initialisation. During initialisation, the set tyre pressure is taken as the initial value for the current set of wheels.

Correct the tyre pressures when the tyres are cold to prevent the data recorded from being affected by temperature.

IMPORTANT: Responsibility resides with the driver at all times.

Check tyre pressures regularly, at least twice a month and before embarking on lengthy journeys. During initialisation, the set tyre pressure is taken as the initial value for the current set of tyres.

Initialise the RPA in the following situations:

- If tyre pressure is changed
 - (tyre pressure is corrected or reset)
- If the position of the tyres is changed (change of axles, wheels), even if the tyre pressure is not changed
- If a tyre is changed or the wheels are interchanged
 - (e.g. old tyres for new tyres, summer tyres for winter tyres, etc.)

Start initialisation as follows:

- Terminal 15 ON
 - (engine OFF or ON, do not pull away)
- Vehicles **with** RPA button
 - Press and hold the RPA button until the RPA indicator and warning light lights up yellow for a few seconds
- Vehicles **with** BC button (on-board computer function)
 - In the on-board computer function select "RPA" and "INIT" (LCD display) with the rocker switch on the turn-signal/main-beam switch. Press the BC button to confirm.
 - Press and hold the BC button for approx. 5 seconds, until a box with a tick appears behind the "INIT" display.
- Vehicles with Central Information Display

Initialisation is performed via the Central Information Display (CID) and controller.

- Select "RPA" in the "Settings" menu and confirm.
- Select "Set" and confirm.
- Drive off

The end of the initialisation phase is not indicated.

Preconditions For Activation

The Run Flat Indicator (RPA) is automatically activated when terminal 15 is switched ON. The RPA cannot be switched off manually.

NOTES FOR SERVICE STAFF

Service staff should note the following points:

General information:

General information for Service staff on the Run Flat Indicator The following general information on the Run Flat Indicator (RPA) is given for Service staff:

- Wheel-Speed Sensor Failure
- Read Off Status Of Initialisation Phase

Wheel-Speed Sensor Failure If no signal is received from one of the wheel-speed sensors, the RPA will switch to "inactive" mode after approx. 2 minutes. The RPA indicator and warning light lights up yellow. The fault is indicated with a check control message. A fault is recorded in the fault memory of the RPA control unit.

If the RPA is integrated into the DSC, a fault will be recorded in the DSC control unit. If the signal returns after a signal failure, the RPA will be active again after driving for approx. 30 minutes. The fault will remain stored in the fault memory.

Read off status of initialisation phase The status of the initialisation phase can be displayed in the service functions for the control unit concerned (e.g. DSC control unit).

Diagnosis:

Encoding/Programming The Run Flat Indicator

- **Encoding** At the factory, the Run Flat Indicator (RPA) software is adapted to the model series concerned (encoding data). The RPA is encoded with the encoding data. Here, different parameters specific to the various vehicle models are written into the control unit.
- **Programming** The RPA is automatically programmed with the software for the Dynamic Stability Control (DSC).

US NATIONAL VERSION

A flat tyre is indicated as follows:

- E53, E83, E85

Yellow RPA indicator and warning light **without** acoustic signal

- E60, E61, E63, E64, E65, E66, E90, E91

Yellow RPA indicator and warning light **with** acoustic signal

An RPA failure is indicated as follows:

- Yellow RPA indicator and warning light **without** acoustic signal

Subject to alteration due to misprints, errors and technical modifications.

TYRES WITH EMERGENCY RUNNING CHARACTERISTICS AND TYRE

PRESSURE WARNING SYSTEMS

All models

GENERAL INFORMATION

Warning Systems

BMW AG offers two different systems to warn the driver of a drop in tyre pressure.

WARNING SYSTEMS SPECIFICATIONS

System	Description	Measuring principle
RDC	Tyre pressure control	Tyre pressure/temperature
RDW	Tyre pressure warning	Comparison of wheel speeds

Emergency Running Systems

In addition to the warning systems, two emergency running systems are also employed to prevent a depressurised tyre from caving in:

Components of emergency running system with self-supporting tyres:

EMERGENCY RUNNING SYSTEM COMPONENTS (WITH SELF-SUPPORTING TYRES)

RDW (standard equipment)	Tyre pressure warning
RDC (available as option from 03/2000)	Tyre pressure control
SST	Self Supporting Tyre
EH2 disc wheel	Disc wheel with Extended Hump 2

Components of emergency running system with integrated support ring:

EMERGENCY RUNNING SYSTEM COMPONENTS (WITH INTEGRATED SUPPORT RING)

Support ring	NOTE: In the future, only for heavy safety vehicles (E38/3)
RDC (optional)	Tyre pressure control
H2 disc wheel	Standard disc wheel with Hump 2

TYRE PRESSURE CONTROL (RDC)

RDC System Description

RDC permanently monitors the tyre pressure and the temperature in the tyres, both while the vehicle is being driven and when it is stationary. Data is transmitted via data telegram by the wheel electronic units to the antennas installed in the wheel housing and on to the RDC control unit. There, the data received is compared with the stored limit values.

After correcting the air pressure with the engine off and the ignition on, press the Set button and hold (approx. 6 seconds) until the words "Set tyre pressure" appear in the instrument cluster (instrument cluster high) or the yellow LED lights up (basic instrument cluster).

If the limit values are exceeded, the driver will be warned via the instrument cluster in two stages, as follows:

RDC WARNING SYSTEM (LOSS OF TIRE PRESSURE)

Loss of tyre pressure	Warning
Drop in tyre pressure of 0.2 to 0.4 bar	Yellow LED on basic instrument cluster, or Text: "Check tyre pressure" on instrument cluster high Gong: no
Drop in tyre pressure of more than 0.4 bar	Red LED on basic instrument cluster, or Text: "Tyre failure" on instrument cluster high Gong: yes

Advantages of RDC

ADVANTAGES OF RDC

1) Safety	<ul style="list-style-type: none"> ○ early warning in the event of rapid loss of pressure ○ warning of loss of tyre pressure through normal diffusion
2) Comfort	<ul style="list-style-type: none"> ○ unchanging ride comfort ○ instruction to check tyre pressure as necessary
3) Service life, economy	<ul style="list-style-type: none"> ○ minimisation of tyre wear ○ minimisation of fuel consumption
4) New developments	<ul style="list-style-type: none"> ○ allow tyres with emergency running characteristics to be fitted ○ no spare wheel if tyres with emergency running characteristics are fitted (saves weight)

RDC System Layout

Fig. 29: RDC System Layout

Courtesy of BMW OF NORTH AMERICA, INC.

Component Description

RDC Control Unit

Fully diagnosis-compatible

Task:

Evaluates the following telegrams from the wheel electronic units:

- Tyre Pressure
- Tyre Air Temperature
- Identification Number Of Wheel Electronic Unit

- Remaining Service Life Of Wheel Electronic Unit Battery

Fig. 30: Identifying RDC Control Unit
Courtesy of BMW OF NORTH AMERICA, INC.

If required, information or a warning is transmitted.

Wheel Electronic Unit With Valve

Components:

- Pressure Sensor
- Temperature Sensor
- Transmitter
 - Frequencies According To Country
- Power Supply

- Service Life: Approx. 7 Years
- Not Exchangeable

Fig. 31: Identifying Wheel Electronic Unit With Valve
Courtesy of BMW OF NORTH AMERICA, INC.

Installation Location Of Wheel Electronic Unit In Disc Wheel

The wheel electronic unit (1) is screwed to the valve (2) on the disc wheel (3)

Identifying feature: Metal Tyre Valves

NOTE: Different valves have to be used to allow for the different disc wheel sizes. The valves are colour-coded. The correct coding can be taken from the spare parts catalogue.

G03179531

Fig. 32: Identifying Installed Position Of Wheel Electronic Unit In Disc Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

Antenna

There is an antenna in each wheel housing.

Task: Receives telegrams and forwards these to the RDC control unit.

G03179532

Fig. 33: Identifying RDC Antenna

TYRE PRESSURE WARNING RDW

RDW System Description

RDW measures the wheel speeds on all four wheels, using the wheel speed sensors of the ABS/ASC or ABS/DSC system. It compares the wheel speeds of the diagonally opposite wheels and of the average speed.

In the event of a drop in tyre pressure, the dynamic diameter of a wheel will change, leading to a changed wheel speed.

A drop in tyre pressure of 30 +/- 10 % can be detected on all wheels from about 15 km/h (10 mph) up to the vehicle's top speed.

If this value is exceeded, the driver will be warned via the instrument cluster as follows:

RDW SYSTEM DESCRIPTION

Loss of tyre pressure	Warning
Loss of tyre pressure of 30 +/- 10 %	Red LED Text: "Tyre failure" Gong: yes The vehicle is not to be driven faster than 80 km/h (50 mph).

NOTE: A cautious driving style with moderate forward and transverse acceleration will help to prolong the service life of the defective tyre.

Advantages of RDW

With two exceptions, the advantages of RDC also apply to RDW.

Exceptions:

- no warning of loss of tyre pressure through normal diffusion
- tyre pressure still have to be checked regularly, every 14 days

RDW System Layout

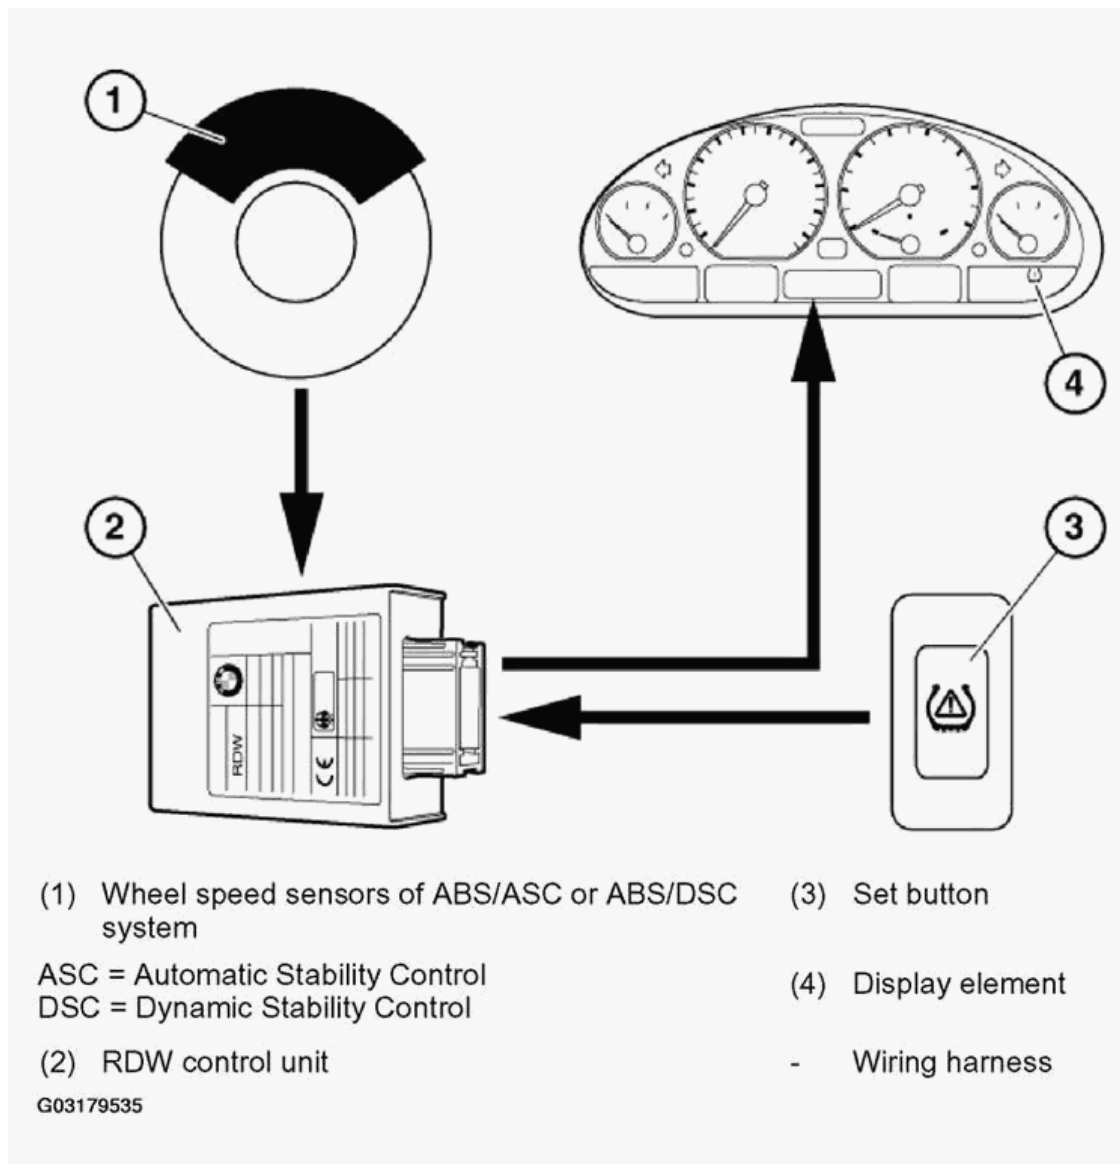

Fig. 36: RDW System Layout

Courtesy of BMW OF NORTH AMERICA, INC.

Component Description

RDW Control Unit

Fully diagnosis-compatible

Task:

- evaluates wheel speeds.
- a warning is transmitted as required.

Fig. 37: Identifying RDW Control Unit

EMERGENCY RUNNING SYSTEMS

Introduction

Tyres with emergency running characteristics can still be used for a certain distance even if they suffer a complete loss of pressure. There are two different systems which meet these requirements:

- emergency running system with self-supporting tyres
- emergency running system with integrated support ring

Emergency Running Systems Setup

Emergency Running System With Self-Supporting Tyres

The side walls of the self-supporting tyre are reinforced. In conjunction with a special disc wheel, the tyre can still be used for a certain distance even if it suffers a complete loss of pressure.

Mobility is retained for the following distances up to a speed of 80 km/h (50 mph) and with a cautious, suitably adapted driving style:

EMERGENCY RUNNING SYSTEM DESCRIPTION

Unloaded vehicle	max. 500 km (300 miles)
Unloaded roadster	less than 250 km (150 miles)

Self-supporting tyres demand permanent monitoring of the tyre pressure to ensure that the driver is given adequate warning if pressure is lost during a journey. For this reason, these tyres are only available in conjunction with the warning system RDW and from 03/2000 also with RDC.

To prevent the self-supporting tyres from becoming detached from the disc wheel in the event of a complete loss of tyre pressure, they must be fitted to newly developed wheels with modified disc wheel humps, but with unchanged tyre seating (= standard disc wheel).

However, the new wheels can also be used for standard tyres of the same size.

Comparison Standard Tyres/Self-Supporting Tyres

Standard Tyres, Unpressurised

Fig. 40: Identifying Unpressurised, Standard Tyres

EH2 Disc Wheel For Emergency Running System With Self-Supporting Tyre

G03179542

Fig. 43: Identifying EH2 Disc Wheel

Courtesy of BMW OF NORTH AMERICA, INC.

1. Extended Hump 2 of disc wheel
2. Drop centre relocated a few millimetres to the centre (precentring on outside)

NOTE: The new EH2 disc wheels (extended Hump 2 inner and outer) will be used more frequently on BMW vehicles in the future as they can also help to delay standard tyres from being lost in the event of a drop in tyre pressure.
Example: from current 1.1 bar to 0.6 bar (X5 or Landrover disc wheel)

Emergency Running System With Integrated Support Ring

(In the future, primarily on heavy safety vehicles)

The support ring is made of a high-strength resilient plastic and is fitted on the disc wheel inside the tyre. The support ring can only be removed using special tools which have been specially approved by BMW. It can only

be removed after destroying the tyre.

Emergency running systems with integrated support ring are used in particular on heavy safety vehicles. They allow the vehicle to be driven away from a potential danger without dropping speed even if the tyres have suffered a complete loss of pressure (flight situation).

It is possible as an option to have the tyre pressure monitored by an RDC system. The RDC is installed by pressing the components into the support ring before it is fitted.

For further information on the subject of "Tyre pressure warning systems and tyres with emergency running characteristics", please refer to the vehicle Owner's Handbook.

A Parts Information bulletin will be published with information on how to order parts.

Functional and system descriptions are not subject to change. Parts availability and immediate ordering

availability cannot be derived from this information. The specialised departments will inform the markets with further details at the appropriate time.

STORING WHEELS AND TYRES

All Models

WHEELS/TYRES - GENERAL NOTES

The service of storing a customer's wheels is one which is now almost taken for granted. For this reason, we have published this BMW Technical Service bulletin to provide a uniform storage concept, which will prevent damage being caused due to incorrect storage.

The tyre's rubber will age under the influence of sunlight, heat, humidity, movements in the air and ozone, and will thus lose some of its stability and elasticity. For this reason, tyres should never be stored in the open-air. If open-air storage cannot be avoided, the wheels/tyres must be stored in a clean and dry condition and covered with waterproof material. It is essential that wheels/tyres are protected against rain, snow and sunlight, but due to the risk of corrosion they must not be stored in tyre sacks. For more information on protective covers for wheels and tyres, see SI 36 01 88 (864).

Wheels/tyres with tyre pressure control (RDC) must not be cleaned with high-pressure cleaning equipment. For general information on RDC, **TYRES WITH EMERGENCY RUNNING CHARACTERISTICS AND TYRE PRESSURE WARNING SYSTEMS**.

Storage Requirements

The following requirements apply in general to storage in enclosed rooms:

STORING WHEELS AND TYRES SPECIFICATIONS

cool	15...25 °C / sources of heat screened, or 1 m minimum distance from source of heat
dry	Prevent water and condensation Avoid contact with mineral lubrication products
dark	Protect from direct sunlight and high-UV artificial light
moderate ventilation	Avoid a supply of oxygen and ozone

In short, the storage room should be cool and dry. It is not necessary to heat the room during the winter. In the summer, the doors and windows should be kept closed to ensure that no air can circulate. In addition, the windows can also be coated with sun protection paint.

The storage room should not contain any working electric machinery, welding equipment, distribution boxes etc. as electrical sparks generate ozone which can have a serious impact on the surface of the tyre (ozone cracks).

Tyres should not be allowed to come into contact with oil, petrol, or other mineral lubricants as these dissolve rubber, making the tyre porous.

Preparing Wheels/Tyres

1. Before removing a wheel, mark its position on the vehicle.
2. Whenever possible, keep the tyre on its wheel (complete wheels).
3. Correct the inflation pressure and recheck every 2 months.
4. Ensure that tyres are stored at a sufficient distance above the ground. Wheels/tyres should never be stored on the ground.
5. Complete the storage forms. These should contain the following data:
 - Type and size of tyre
 - Condition and tread depth
 - Customer's address
 - Date and signature of customer

Wheel/Tyre Storage Requirements

A. Tyre fitted to wheel

Do not store upright, ...

NOTE: If storing the wheels upright cannot be avoided, the inflation pressure must be increased to 3.5 bar.

G03179545

B. Tyres Not Fitted

Do not stack, ...

G03179548

Fig. 49: DO NOT Store Wheel/Tyre In Staked Position (Tyres Not Fitted)
Courtesy of BMW OF NORTH AMERICA, INC.

... do not hang, ...

Fig. 50: DO NOT Store Wheel/Tyre In Hanging Position (Tyres Not Fitted)
Courtesy of BMW OF NORTH AMERICA, INC.

... but rather store them upright and turn them every 4 weeks.

NOTE: **Never store tyres on the ground.**
 Use commercially available shelves.

Wheel and Tires - Special Tools - X3

36 WHEELS AND TIRES

36 1 010 SPRING LIFTER

Note: For lifting retaining spring when removing and installing balance weight

Series: E12, E21, E23, E24, E28, E30, E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, E87, E90, E91, E92, E93

Storage location: A28

SI number: 1 01 96(034)

Order number: 36 1 010

Spring lifter

Fig. 1: Spring Lifter (36 1 010)

Courtesy of BMW OF NORTH AMERICA, INC.

36 1 020 TYRE PLIERS

Note: For compressing sides of tires when removing and installing retaining spring

Series: E12, E21, E23, E24, E28, E30, E31, E32, E34, E36, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, E87, E90, E91, E92, E93

SI number: 1 01 96(034)

Order number: 36 1 020

Tyre pliers

Fig. 2: Tyre Pliers (36 1 020)

36 1 120 LEVER

Note: For prying off Styling 90 wheel cover

Series: E60, E61, E63, E64, E65, E66, E67, E83, E86, E87, E90, E92

SI number: 1 14 01(766)

Order number: 36 1 120

Lever

Consisting of:

1 = 36 1 121 Lever, individual

2 = 36 1 122 Support

Fig. 5: Lever (36 1 120)

Courtesy of BMW OF NORTH AMERICA, INC.

36 1 250 WHEEL HUB GRINDER

Note: For cleaning wheel hubs

Series: E12, E21, E23, E24, E28, E30, E30/C, E30tou, E31, E32, E32/3, E34, E34tou, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E38, E38/3, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E92, R50, R52, R53, RR1, RR2

SI number: 1 15 03 (005)

Order number: 36 1 250

Wheel hub grinder

Consisting of:

1 = 36 1 251 Basic body

Note: Basic body with mounting screws (slotted pan-head screw)

2 = 36 1 252 Grinding wheel

3 = 36 1 253 Slotted pan-head screw (3 x)

Note: For securing grinding wheel on basic body

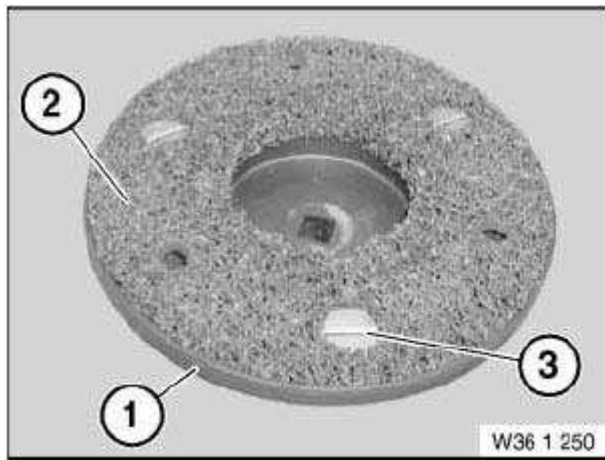

Fig. 6: Wheel Hub Grinder (36 1 250)

Wheels & Tires - Repair Instructions - X3

10 WHEELS

36 10 209 CHECKING FRONT AND REAR WHEEL FOR FACE AND RADIAL RUNOUT

Special tools required:

- 36 1 030 TESTER .

Necessary preliminary tasks:

- Check wheel bearings

Lift vehicle.

Check wheel with special tool 36 1 030 (measuring fixture) for lateral runout and radial runout, see 36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS .

Fig. 1: Lateral Runout With Special Tool (36 1 030)
Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 2: Checking Radial Runout With Special Tool (36 1 030)
Courtesy of BMW OF NORTH AMERICA, INC.

If applicable, remove balance weights.

Fig. 3: Lateral Runout Of Rim With Special Tool (36 1 030)
Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 4: Radial Runout With Special Tool (36 1 030)
Courtesy of BMW OF NORTH AMERICA, INC.

36 10 300 REMOVING OR INSTALLING FRONT OR REAR WHEEL

Special tools required:

See, **36 WHEELS AND TYRES**

- 36 1 120
- 36 1 250
- 36 1 300

IMPORTANT: Observe safety instructions on 00 LIFTING VEHICLE WITH A LIFTING PLATFORM .

Follow instructions on initializing Run Flat Indicator (RPA), see 36 11 500 Initializing Run Flat Indicator (RPA).

After completing installation, check again that all wheel bolts are tightened to specified torque.

Tightening torque: 36 10 1AZ, see 36 10 WHEELS .

Observe the following procedure to prevent shift errors and imbalance:

- Loosen wheel bolts.
- Wheel positioned with valve facing down.
- If several wheels are removed simultaneously, mark the installation locations of the wheels on the tires (e.g. with chalk).
- Mark out wheel to wheel hub.
- Mark out lockable wheel bolt in relation to wheel.
- Release wheel bolts, remove wheel.

Fig. 5: Valve And Nut

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Contact surfaces between:

- brake disk and disk wheel,
- brake disk and wheel hub,

must be free from grease.

Remove dirt, grease residues and corrosion from contact

face (1) with a drill and special tool 36 1 250.

IMPORTANT: Do not operate special tool 36 1 250 with an impact screwdriver!

NOTE: Degrease contact face with universal cleaner.

NOTE: If there are grease residues in the area of the wheel stud bore, the brake disk must be removed and cleaned, see 34 11 220 REMOVING AND INSTALLING/REPLACING BOTH FRONT BRAKE DISCS .

Fig. 6: Contact Face With Special Tool (36 1 250)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove dirt, grease residues and corrosion from contact face (1) with a drill and special tool 36 1 250.

IMPORTANT: Do not operate special tool 36 1 250 with an impact screwdriver!

NOTE: Degrease contact face with universal cleaner.

Fig. 7: Brake Disc With Special Tool (36 1 250)
Courtesy of BMW OF NORTH AMERICA, INC.

Check brake disk retaining bolt (1) for secure seating.

IMPORTANT: Mounting bolt (1) must not under any circumstances protrude over contact surface (2) between brake disk and disk wheel.

Tightening torque brake disk retaining bolt:

Front axle 34 11 1AZ, see **34 11 FRONT BRAKE**

Rear axle 34 21 1AZ, see **34 21 REAR BRAKE**

Fig. 8: Brake Disk Retaining Bolt And With Contact Surface
Courtesy of BMW OF NORTH AMERICA, INC.

Apply a thin coat of grease to wheel centering (1) in disk wheel.

Fig. 9: Wheel Centering In Disk Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

Wheel studs with taper:

- a. Wheel bolt - galvanized
- b. Wheel bolt - black chrome plated
- c. Wheel bolt - black chrome plated and lockable
- d. Lockable wheel stud with adapter, black chrome-plated

NOTE: To release and tighten down lockable wheel stud, use a matching adapter from special tool 36 1 300.

Fig. 10: Wheel Stud With Adapter

Courtesy of BMW OF NORTH AMERICA, INC.

Clean wheel bolts and check threads for damage, replace, if necessary.

Replace rusty wheel bolts.

IMPORTANT: Do not apply oil to new wheel bolts.

Before inserting, wipe threads and tapers of used wheel bolts with an oil cloth.

**IMPORTANT: You may use an impact or power screwdriver to insert the wheel bolts and join the wheel until a tightening torque of 20 Nm is obtained.
Do not under any circumstances use an impact or power screwdriver to tighten down the wheel bolts (in diagonal sequence); this must be done by hand.**

Tighten down wheel bolts with a calibrated torque wrench to prescribed tightening torque.

Tightening torque 36 10 1AZ, see **36 10 WHEELS** .

IMPORTANT: Disk wheel must rest uniformly against brake disk.

Fig. 11: Down Wheel Bolts With Calibrated Torque Wrench
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: For wheels with Styling 90 wheel cover.
The wheel cover can be removed for cleaning and removal of foreign objects.

Fit special tool 36 1 120 (3) as shown on rim (1) (near valve).

Engage removal fork of special tool 36 1 120 (3) in wheel cover (2).

Pull off wheel cover (2) with handle of special tool 36 1 120 (3).

Fig. 12: Rim With Wheel Cover
Courtesy of BMW OF NORTH AMERICA, INC.

36 10 508 STATIONARY WHEEL BALANCING

Special tools required:

See **36 WHEELS AND TYRES** .

- 36 1 010
- 36 1 020

Necessary preliminary tasks:

- Remove the wheel, see **36 10 300 Removing or installing front or rear wheel.**

IMPORTANT: Use only BMW-approved balance weights.

Remove any fitted balancing weights, stones in tread pattern and larger contaminants.

Check tire pressure, check tire for condition, damage, flat spots (out-of-round caused by e.g. stopping the car with hot tires); if necessary, check wheel and tire for radial and lateral runout, see **36 10 209 Checking front and rear wheel for face and radial runout**

Fig. 13: Checking Wheel And Tyre For Radial And Lateral Runout
 Courtesy of BMW OF NORTH AMERICA, INC.

Use BMW-approved centering elements of relevant balancing machine manufacturers.

1. Basic flange
2. Wheel centering element
3. Type flange
4. Clamping nut

Also refer to section on **WORKSHOP EQUIPMENT** .

Fig. 14: Basic Flange, Wheel Centering Element And Clamping Nut
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: To avoid retooling errors, it will be necessary to fit the wheel on the balancing machine in the same way (e.g. valve facing down) as it is then fitted on the car. Balance wheel in accordance with operating instructions of relevant balancing machine.

On light-alloy rims with distinctive J-shape rim flange, proceed as follows:

1. Gently force off tire side wall with special tool 36 1 020 at appropriate point from rim flange.
2. Install retaining clip (1).
3. Remove special tool 36 1 020.

Fig. 15: Retaining Clip Special Tool (36 1 020)
 Courtesy of BMW OF NORTH AMERICA, INC.

Raise retaining clip with special tool 36 1 010. Slide balance weight underneath and allow it to snap into place.

Fig. 16: Special Tool (36 1 010)
Courtesy of BMW OF NORTH AMERICA, INC.

Arrangement of balance weights for light-alloy rims with distinctive J-shape rim flanges.

1. Spring retainer
2. Balance weight

Adhesive weights must be used on all other light-alloy rims. **36 10 WHEELS ONE-PART ALLOY WHEELS** .

Fig. 17: Spring Retainer And Balance Weight
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: When using adhesive weights, proceed as follows:

1. Carefully remove any adhesive weights. Do not damage rim when doing so.
2. Select suitable location for fitting.

3. Clean adhesive area thoroughly.

IMPORTANT: On the E87 with 16" tires, do not use stick-on weights; use only clamp-on weights instead.

36 10 713 CHECKING ONE ROAD WHEEL ON BALANCING MACHINE FOR FACE AND RADIAL RUNOUT (WHEEL REMOVED)

Special tools required:

See 36 WHEELS AND TYRES .

- 36 1 030
- 36 1 031
- 36 1 032
- 36 1 033
- 36 1 034
- 36 1 035
- 36 1 036

Necessary preliminary tasks:

- Remove wheel, see 36 10 300 Removing or installing front or rear wheel.

Mount wheel in balancing machine.

To avoid retooling errors, fit the wheel on the balancing machine in the same way as it is also fitted on the car (valve position facing down).

Fig. 18: Wheel And Tyre For Radial And Lateral Runout
Courtesy of BMW OF NORTH AMERICA, INC.

Use suitable wheel centering element supplied with corresponding balancing machine.

1. Basic flange
2. Wheel centering element
3. Type flange
4. Clamping nut

Also refer to section on **WORKSHOP EQUIPMENT** .

Fig. 19: Basic Flange, Wheel Centering Element And Clamping Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Use special tool 36 1 030 for testing.

Special tool 36 1 030 consists of:

1. Stand 36 1 031
2. Post with clamp 36 1 032
3. Holder with clamp 36 1 033
4. Clamp 36 1 034
5. Measuring roller 36 1 035
6. Dial gauge 36 1 036

Fig. 20: Special Tool (36 1 031), (36 1 032) And (36 1 036)
 Courtesy of BMW OF NORTH AMERICA, INC.

Position special tool 36 1 030 on tire tread.

Turn wheel by hand and measure max radial tire runout, see **36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS** .

NOTE: Measuring device must be vertical to tire tread.

Fig. 21: Special Tool (36 1 030)
 Courtesy of BMW OF NORTH AMERICA, INC.

Position special tool 36 1 030 on tire side wall.

Turn wheel by hand and measure max lateral tire runout, see **36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS** .

NOTE: Measuring device must be vertical to tire side wall.
Never measure on printed text on tire!
If necessary, check disk wheel (rim) for radial and face runout, see 36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS .

Fig. 22: Special Tool (36 1 030)

Courtesy of BMW OF NORTH AMERICA, INC.

36 10 715 CHECKING RIM FOR FACE AND RADIAL RUNOUT

Necessary preliminary tasks:

- Remove wheel, see 36 10 300 Removing or installing front or rear wheel.
- Check front and rear wheel for face and radial runout, see 36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS .
- Pull tire off rim
- Remove fitted balance weights
- Remove dirt from rim well and rim flange

IMPORTANT: Disk wheels must not be repaired!

Mount disk wheel in balancing machine.

Fig. 23: Mount Disk Wheel In Balancing Machine
Courtesy of BMW OF NORTH AMERICA, INC.

Use suitable wheel centering element supplied with corresponding balancing machine.

1. Basic flange
2. Wheel centering element
3. Type flange
4. Clamping nut

Also refer to section on **WORKSHOP EQUIPMENT** .

Fig. 24: Basic Flange, Wheel Centering Element And Clamping Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Place dial gauge sensor on rim shoulder.

Turn wheel by hand and measure max radial runout, see **36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS** .

Carry out measurement on both rim shoulder sides.

NOTE: Dial gauge must be vertical to rim shoulder.

Fig. 25: Checking Radial Runout With Dial Gauge
Courtesy of BMW OF NORTH AMERICA, INC.

Position sensor on rim flange.

Turn wheel by hand and measure max lateral runout, see **36 10 WHEELS ONE-PART ALLOY WHEELS ;36 10 WHEELS STEEL AND ALUMINUM STRIP WHEELS ;36 10 WHEELS TWO-PART ALLOY WHEELS** .

Carry out measurement on both rim flanges.

NOTE: Dial gauge must be vertical to rim flange.

Fig. 26: Checking Lateral Runout With Dial Gauge
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Avoid transformation errors during subsequent installation tasks.

11 DISC WHEELS (RIMS)

36 11 105 REMOVING AND INSTALLING RDC (TIRE PRESSURE CONTROL) CONTROL UNIT

IMPORTANT: Read and comply with notes on PROTECTION AGAINST ELECTROSTATIC DAMAGE (ESD PROTECTION) .

Necessary preliminary tasks:

- Remove right luggage compartment trim panel. See **51 47 161 REMOVING AND INSTALLING/REPLACING RIGHT LUGGAGE COMPARTMENT WHEEL ARCH TRIM** .

Press sound-insulating material (1) to one side slightly. Release screw (2) and carefully swing out control unit holder a little.

Fig. 27: Press Sound-Insulating Material (1) To One Side Slightly
Courtesy of BMW OF NORTH AMERICA, INC.

Disconnect plug connection (1). Press lug (2) in direction of arrow and pull out control unit (3) towards top.

Fig. 28: Disconnect Plug Connection (1)
Courtesy of BMW OF NORTH AMERICA, INC.

Replacement:

- Carry out **PROGRAMMING/CODING**

36 11 115 REMOVING AND INSTALLING/REPLACING RDC RECEIVING AERIAL

Necessary preliminary tasks:

- Remove rear **UNDERBODY PROTECTION** .

Disconnect plug connection (1).

Fig. 29: Removing Receiving Aerial

Courtesy of BMW OF NORTH AMERICA, INC.

Gently press retaining tabs apart in direction of arrow and remove receiving aerial (2).

36 11 121 REMOVING AND INSTALLING/REPLACING AN RDC TRIGGER TRANSMITTER (FRONT)

Necessary preliminary tasks:

- Remove front wheel arch trim. See **51 71 040 REMOVING AND INSTALLING/REPLACING FRONT LEFT OR RIGHT WHEEL ARCH COVER** .

Press through studs (1) of expander rivets towards rear. Remove trigger transmitter (2).

Installation:

If necessary, replace plastic nuts.

Fig. 30: Press Through Studs (1) Of Expander Rivets Towards Rear
Courtesy of BMW OF NORTH AMERICA, INC.

36 11 533 REMOVING AND INSTALLING/RENEWING/TIRE PRESSURE CONTROL WHEEL ELECTRONICS (2ND GENERATION)

IMPORTANT: Before removing or refitting, check which generation of wheel modules is fitted. If the electronic wheel module has been removed, the complete valve must be replaced.

NOTE: There are two different electronic wheel modules. The SP303 electronic wheel module must be used with RDC-01 and RDC-02 from model year 03/06. The Gen3 electronic wheel module must be used with RDC-LC from model year 09/09. If a tire sealant has been used, replace the electronic wheel module. When a tire has been removed, do not clean the rim with installed electronic wheel module with high-pressure cleaner. Do not treat electronic wheel module with solvents, cleaning agents etc. If dirty, wipe with a clean cloth only. Before the installation of new wheel electronics with valve, thoroughly clean the valve bore of the wheel rim. Do not clean electronic wheel module with compressed air.

- Remove tire

Labelling of Gen3 electronic wheel module for RDC-LC

1. Data Matrixcode
2. BMW part number
3. FCC ID = radio authorization
4. Electronic wheel module ID
5. Transmission frequency
6. Pressure sensor
7. Width across flats of union nut

8. Tightening torque
9. Production date of electronic wheel module

Fig. 31: Labelling Of Gen3 Electronic Wheel Module For RDC-LC
 Courtesy of BMW OF NORTH AMERICA, INC.

Labelling of electronic wheel modules SP303 RDC-01 and RDC-02

1. Transmission frequency of electronic wheel module
2. Large Torx socket screw
3. BMW part number
4. Tightening torque of Torx screw and union nut
5. Width across flats of union nut
6. Serial number of electronic wheel module
7. Production date of electronic wheel module

Fig. 32: Labelling Of Electronic Wheel Modules SP303 RDC-01 And RDC-02
 Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: The following illustrations only show removal and refitting of the 3rd generation wheel module. The instructions also apply without alteration to the wheel module SP303.

Removing electronic wheel module Release union nut (1).

Fig. 33: Release Union Nut (1)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove wheel module and valve (1) from valve hole.

Fig. 34: Remove Wheel Module And Valve (1) From Valve Hole
Courtesy of BMW OF NORTH AMERICA, INC.

Using suitable pliers (2), unscrew valve (1) from the thread of the square-head bolt (3), while holding the wheel module (4) firm. Completely unscrew valve (1). Remove square-head bolt from wheel module holder.
Installation: Replace valve.

Fig. 35: Using Suitable Pliers (2), Unscrew Valve (1) From The Thread Of The Square-Head Bolt (3)
 Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Before the installation of new wheel electronics with valve, thoroughly clean the valve bore of the wheel rim! Also make sure that the valve bore is free of burrs

Installing electronic wheel module: Insert new square-head bolt (1) in wheel module (2). Screw single-use valve insert (3) three turns onto square-head bolt (1).

Fig. 36: Installing Electronic Wheel Module Insert New Square-Head Bolt (1) In Wheel Module (2)
 Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Make sure the square head screw (1) fits exactly in the holder for the electronic wheel module!

Insert valve insert with electronic wheel module into cleaned valve bore. Both outer feet on the underside of the wheel module must be resting against the rim wall.

Fig. 37: Make Sure The Square Head Screw (1) Fits Exactly In The Holder For The Electronic Wheel Module

Courtesy of BMW OF NORTH AMERICA, INC.

Screw on sleeve nut (1) by hand as far as it will go. Tighten sleeve nut until the inner strip-off ring breaks. Breakage is perceptible audibly and tangibly (momentary drop in torque resistance). Then fully tighten sleeve nut (1). Tightening torque, see 36 11 1AZ in **36 11 WHEEL RIMS** .

Fig. 38: Screw On Sleeve Nut (1) By Hand As Far As It Will Go

Courtesy of BMW OF NORTH AMERICA, INC.

Important! Fixing must not under any circumstances be retightened! The square-head bolt should be located precisely in the wheel module holder. After tightening, the electronic wheel module must fit snugly on the rim!

36 11 500 INITIALIZING RUN FLAT INDICATOR (RPA)

NOTE: **Checking the tire pressure is based on monitoring the speeds of the wheels in relation to each other. A tire puncture is detected and signalled by way of a deviation in specific speed ratios.**
The four tires mounted on the vehicle are monitored while the vehicle is

moving.

Initialization must be carried out in each case immediately after tire pressures have been corrected, after tires/wheels have been replaced and after repairs to the air spring system.

IMPORTANT: The Run Flat Indicator does not function when the vehicle is driven with the compact spare wheel.

36 11 503 RDC RESETTING

NOTE: RDC monitors the tire inflation pressure in the four wheels. Each tire incorporates an electronic wheel circuit, which constantly monitors the tire inflation pressure. The system signals when the inflation pressure drops in one or more tires. Resetting must be carried out in each case immediately after tire pressures have been corrected, after tires/wheels have been replaced and after repairs to the air spring system.

36 11 533 REMOVING AND INSTALLING / REPLACING RDC WHEEL ELECTRONICS

Special tools required:

- 00 2 190

NOTE: If a tire sealant has been used, replace the wheel electronics. When a tire has been removed, do not clean the rim with installed wheel electronics with high-pressure cleaning equipment. Do not treat wheel electronics with solvents, cleaning agents etc. If dirty, wipe with a clean cloth only. Do not clean wheel electronics with compressed air.

IMPORTANT: If the wheel electronics have been removed, the complete valve must be replaced.

Necessary preliminary tasks:

- Remove tire, see **36 12 001 Replacing a tire.**

Labelling of wheel electronics

1. Transmitting frequency of wheel electronics
2. Large Torx socket
3. BMW part number
4. Tightening torque of Torx screw and union nut
5. Width across flats of union nut

- 6. Serial number of wheel electronics
- 7. Date of manufacture of wheel electronics

Fig. 39: Torx Socket Crew And Wheel Electronics
 Courtesy of BMW OF NORTH AMERICA, INC.

Removing wheel electronics

Release Torx socket crew (1) and remove wheel electronics (2).

Fig. 40: Torx Socket Crew And Wheel Electronics
 Courtesy of BMW OF NORTH AMERICA, INC.

Release union nut with special tool 00 2 190; if necessary, grip valve insert (1) at cylindrical section of ball head.

Remove valve insert from rim.

Fig. 41: Union Nut With Special Tool (00 2 190)
Courtesy of BMW OF NORTH AMERICA, INC.

Remove washer (1).

Fig. 42: Washer
Courtesy of BMW OF NORTH AMERICA, INC.

Installing wheel electronics

Insert new Torx socket screw (1) in wheel electronics (2) and secure firmly.

Twist new valve insert (3) by hand approx. 3 turns onto screw (1).

NOTE: Do not tighten screw; wheel electronics and valve insert must be loosely joined together.

Fig. 43: Torx Socket Screw, Wheel Electronics And Valve
Courtesy of BMW OF NORTH AMERICA, INC.

Insert valve insert with wheel electronics into cleaned valve bore.

Here the radial bore (1) for gripping on the circumference of the valve insert ball head must point outwards.

Fig. 44: Radial Bore
Courtesy of BMW OF NORTH AMERICA, INC.

Insert the brace (1) supplied with the valve into the valve insert bore.

Fit new washer and screw on new union nut (2) by hand as far as it will go.

Tighten down union nut (2) while using brace (1) to prevent valve insert from turning.

Installation:

Tightening torque: 36 11 1AZ, see **36 11 WHEEL RIMS** .

Fig. 45: Brace And Union Nut

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: The screw connection must be tightened to the specified torque in one go!
Do not under any circumstances retighten the screw connection!
Remove brace, otherwise it may damage the tire.

Press wheel electronics gently into well base and tighten Torx socket screw (1).

Installation:

Tightening torque: 36 11 2AZ, see 36 11 WHEEL RIMS .

IMPORTANT: The screw connection must be tightened to the specified torque in one go!
Do not under any circumstances retighten the screw connection!

Fig. 46: Torx Socket Screw

Courtesy of BMW OF NORTH AMERICA, INC.

12 TIRES

36 12 001 REPLACING A TIRE

Fig. 47: Changing Tyre Machine
Courtesy of BMW OF NORTH AMERICA, INC.

Refer to the operating manual of the relevant fitting equipment manufacturer for details on how to fit the tire correctly. However, it is essential to make sure that the equipment is in proper working condition and there is no damage to the disc wheel or the tire.

NOTE: Comply with approved tires, tire sizes and optional extra.
Follow instructions on initializing run flat indicator:

- Run flat indicator (RPA)

NOTE: Pay attention to different tire markings:

- Item (1) Marking denoting BMW-approved tires. Ensure that only BMW-approved tires are fitted.
- Item (2) RSC is the abbreviation for R unflat S ystem C omponent (runflat

tires).

- **Item (3) Outside.** The tire must be fitted so that the wording **Outside** is always situated on the outside of the rim.

IMPORTANT: Many tires are directional!

Fig. 48: Tyre Point

Courtesy of BMW OF NORTH AMERICA, INC.

The arrow on the tire must point in the direction of travel for each wheel!

Models with M Mobility system

If the tire was filled with the M-Mobility system after a puncture, it will be necessary before removal to drill an approx. 25 mm dia. hole in the side wall of the tire. Allow sealing compound to flow out through this bore and dispose of compound in compliance with environmental regulations. Clean disc wheel after removing tire.

Tyre removal with a fitting machine:

Unscrew valve insert, discharge air, force off tire bead from rim flange with pressing-off horn of device on outside and inside.

If tire beads are stuck, first release the tire with the pressing - off horn at several points of the wheel before actually pressing off, apply tire mounting paste between tire and rim flange and press off the tires completely.

Pull off balance weights on rim and clean rim to remove large pieces of dirt.

Clamp wheel on mounting machine.

Narrow rim shoulder always faces upwards.

Fig. 49: Removing Wheel Rim

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Vehicles with RDC:

To prevent the pressing-off horn from damaging the RDC wheel electronics, do not rest the pressing-off horn on both rim sides in the area of the valve.

Swing or fold mounting pillar into position and let it engage.

Adjust mounting head, pressing it on the rim edge fully, and turn down the lever for the clamp; normally the distance of the mounting head will set in automatically.

The valve should be approx. 15 cm to the right of the assembly head (so as to prevent the tire iron from damaging the wheel electronics).

Raise tire bead with tire iron over mounting finger.

Fig. 50: Raising Tyre Bead With Tyre Iron Mounting Finger

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: On aluminium rims, it is best to use a tire iron coated (either fully or partially) with shrink-on plastic tubing to prevent damage.

Let fitting machine run back a short distance (counterclockwise); tire bead will slip fully onto mounting finger.

Then let fitting machine run forward in stages (clockwise).

In so doing, always check whether the lower bead is fully resting in the well and allow the tire time to move.

If the bead clamps, stop the machine and let it run back slightly.

Fig. 51: Removing Tyre Bead

Courtesy of BMW OF NORTH AMERICA, INC.

If the upper bead is pulled off the rim, also lift the bottom bead over the mounting finger with the tire iron.

Let machine run back a short distance again and then forward (clockwise) briefly until there is complete separation of the tire from the rim.

IMPORTANT: Vehicles with RDC:

Tyre bead must not press onto wheel electronics.

Fig. 52: Removing Tyre Rim

Courtesy of BMW OF NORTH AMERICA, INC.

Release lock and tilt back or swing away mounting pillar.

Unclamp and clean rim.

Replace valve.

Coat rim flange and tire beads with mounting paste.

IMPORTANT: Vehicles with RDC:

When the wheel electronics are installed, the rim must not be cleaned with high-pressure cleaning equipment.

Visually inspect wheel electronics for external damage and check for tight fit; do not retighten screw and union nut. If one of the valve parts is loose, replace the entire valve.

Keep wheel electronics free of tire mounting paste.

Fig. 53: Releasing Lock And Tilt Back

Courtesy of BMW OF NORTH AMERICA, INC.

Clamp rim on fitting machine, valve must be located at 180° to mounting head.

Slide on tire with lower bead partially over rim flange.

Swing or tilt mounting pillar into position and lock.

Check adjustment of mounting finger, readjusting if necessary, and clamp.

Press tire under mounting finger by hand.

Tyre bead should seat in rollers next to mounting finger.

Let fitting machine run forward (clockwise) a short distance.

Lower tire bead will drop into well.

IMPORTANT: Vehicles with RDC:

Fit lower tire bead so that no pressure forces are exerted on wheel electronics.

Fig. 54: Tyre Under Mounting Finger

Courtesy of BMW OF NORTH AMERICA, INC.

Turn wheel again into fitting position so that valve is at 180° to mounting head.

Press upper tire bead under mounting finger. Tyre bead should seat in rollers next to mounting finger.

IMPORTANT: Do not pinch or damage bead.

Operate fitting machine forwards (clockwise) little by little; while doing so, make sure the lower tire bead remains in the well.

IMPORTANT: Vehicles with RDC:

Fit upper tire bead so that no pressure forces are exerted on wheel electronics.

Fig. 55: Pressing Upper Tyre Bead Under Mounting Finger
Courtesy of BMW OF NORTH AMERICA, INC.

After mounting, first release clamps and then inflate tire (without valve).

Increase pressure up to 3.3 bar (330 kPa) in steps (jumping pressure).

If the tire bead does not slip on all round at the rim edge, do not increase pressure further but rather drain off air.

Press off tire bead again, coat rim flange again with tire mounting paste, and pump up again to 3.3 bar. When the beads are resting properly on the rim shoulders, increase inflation pressure to max. 4.0 bar to "settle" the tire.

Screw in valve insert and correct tire pressure.

Fig. 56: Releasing Clamping Claws
Courtesy of BMW OF NORTH AMERICA, INC.

36 12 005 REPLACING A RUNFLAT TIRE

Follow the fitting machine manufacturer's operating instructions.

It is absolutely essential to ensure that the equipment is in proper working condition and that there is no damage to the disc wheel and tire.

After completion of work, balance wheels, see 36 10 508 Stationary wheel balancing.

IMPORTANT: Only fitting machines which are approved for fitting runflat tires may be used!
Please refer to the operating instructions of the respective fitting machine for details of the exact fitting procedure.
Use only BMW-approved plastic-covered tire irons.
Use only BMW-approved tire mounting paste.

NOTE: Pay attention to different tire markings:

- Item (1) Marking denoting BMW-approved tires. Ensure that only BMW-approved tires are fitted.
- Item (2) RSC is the abbreviation for R unflat S ystem C omponent (runflat tires).
- Item (3) Outside. The tire must be fitted so that the wording Outside is always situated on the outside of the rim.

Fig. 57: Identifying Tyre Point

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Many tires are directional!
The arrow on the tire must point in the direction of travel for each wheel!

After completing fitting, first release clamping claws.

Inflate with air (without valve insert).

Increase pressure up to 3.3 bar in stages (jumping pressure).

If the tire bead does not slip fully past the rim edge all round, do not under any circumstance increase the pressure.

Release air and force off tire bead again.

Coat rim flange with tire mounting paste again.

Inflate tire again up to 3.3 bar.

When tire beads are resting perfectly on rim shoulders, increase inflation pressure to max. 4.0 bar to "settle" tire.

Screw in valve insert and correct tire pressure.

Fig. 58: Releasing Clamping Claws
Courtesy of BMW OF NORTH AMERICA, INC.

Follow instructions on initializing Run Flat Indicator (RPA), see **36 11 500 Initializing Run Flat Indicator (RPA)**.

**IMPORTANT: Advise the customer to avoid heavy acceleration in the initial period.
The mounting paste can cause the tire to turn on the rim and give rise to imbalance.**

13 MOUNTING

36 13 SUBSEQUENT INSTALLATION OF WHEEL-BOLT LOCK

Loosen wheel bolts.

Raise car so that wheel can be turned freely.

Release wheel studs to such an extent that the wheel can move freely on the wheel hub.

Turn wheel so that valve is face down.

Remove top wheel stud and insert wheel stud lock.

Fig. 59: Valve And Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Possible play in wheel center and wheel weight could cause imbalance.

This imbalance is reduced to a minimum by installing the somewhat heavier wheel-bolt lock in the top wheel-bolt position.

In this position - wheel stud lock at top, valve at bottom - tighten wheel studs hand-tight in diagonal sequence.

Lower car and tighten wheel bolts crosswise.

Tightening torque: 36 10 1AZ, see **36 10 WHEELS** .

If this sequence of fitting the wheel stud lock is followed by a customer complaint about wheel imbalance, it will be necessary to finish-balance the wheels.

Fig. 60: Tightening Down Wheel Bolts With Calibrated Torque Wrench

Courtesy of BMW OF NORTH AMERICA, INC.

SUSPENSION

Wheels And Tires - Operating Fluids

1.0 TIRE MOUNTING PASTE

Use only a lubricant specifically designed for this purpose (former BMW Part No. 81 22 9 407 288).

Wurth Tire Mounting Paste Part No. 892800

Silicone sprays are not acceptable, as they are extremely slippery and don't dry. If applied to the tire bead, it is likely that the tire moves on the rim, causing an imbalance.

2.0 WHEEL CLEANERS

Liquids for cleaning the alloy wheels must be strong enough to lift brake dust, road dirt, etc. off the painted wheel surface with minimum manual agitation, yet not attack the wheel material. The following cleaner has been thoroughly tested for optimum cleaning action and long-term compatibility with the wheel's surfaces:

Wheel Cleaner Spray BMW Part No. 82 14 1 467 045

3.0 WHEEL HUB COVERS

Covers may be affixed to the alloy rim by using Loctite 638 (former BMW Part No. 07 58 9 056 030). Covers may only be used once.

WHEEL HUB COVERS SPECIFICATION

Loctite 638	-	Wurth Part No. 8936010
	-	Loctite Part No. 21447

The cooling-turbine wheel covers of the M5 (E34) produced from March 1990 to October 1990 may be secured to the wheel by applying Loctite 242 to the attaching screw threads. First clean screw threads with Loctite Cleaning Solvent 755.

4.0 ANTI-CORROSION PASTE

Apply small amounts of Plastilube paste evenly around the centering cone of the alloy wheel rim and onto the contact areas of the brake hub.

Plastilube BMW Part No. 81 22 9 407 103.

TRANSMISSION

Automatic Transmission - Operating Fluids

1.0 GENERAL INFORMATION ON AUTOMATIC TRANSMISSION FLUIDS

Automatic Transmission Fluid was developed especially for automatic transmissions. It requires additives which are carefully matched with each other, a high viscosity index and a solidification point below -40°F/-40°C.

Friction behavior of Automatic Transmission Fluid in plate-type clutches under very different operating conditions is extremely important. Other important factors are:

- Wear protection
- Oil film shear resistance
- Adhesive property
- Oxidation resistance
- Corrosion inhibition
- Sludge prevention
- Temperature-dependent viscosity changes
- Compatibility with sealing materials.

2.0 OIL ADDITIVES

Automatic transmissions are designed so that oil additives are not necessary. BMW disapproves the use of any oil additives and cannot accept the liability for any consequential damage which results from using oil additives.

3.0 APPROVED AUTOMATIC TRANSMISSION FLUIDS FOR INITIAL FILLINGS AND CORRECTING FLUID LEVELS

3.1 GM TRANSMISSIONS

USE OF ANY OTHER OIL WILL CAUSE A NON WARRANTABLE TRANSMISSION FAILURE

***Transmission identification plate can be utilized to determine proper transmission fitted in vehicle**

A4S 270R (THM-R1W)

E36

328Xi from 9/06 production to present

The fluid can be sourced locally until a BMW PN is available.

3.2 ZF TRANSMISSIONS

USE OF ANY OTHER OIL WILL CAUSE A NON WARRANTABLE TRANSMISSION FAILURE

***Transmission identification plate can be utilized to determine proper transmission fitted in vehicle**

ZF 3HP22, 4HP22, 4HP24

Utilizes Castrol TQ or Texaco Havoline Automatic Transmission Fluids of the Dexron® III formulation. Never mix any other oil with this transmission fluid when doing repairs or topping up.

A5S 310Z (5HP18)

E36

M3 from 1995 to 1999 production

Utilizes a lifetime filling of synthetic transmission fluid, ESSO LT 71141, no subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 71141, BMW Part No. 83 22 9 407 807.

E34

530i/iT from 1993 through 1995 production

Utilizes Castrol TQ or Texaco Havoline Automatic Transmission Fluids of the Dexron® III formulation. Never mix any other oil with this transmission fluid when doing repairs or topping up.

A5S325Z (5HP19)

E46

323i/Ci/Cic from 3/00 to 8/00 production

325iT from 4/01 production to present

330i/Ci/Cic from 6/00 production to present

325i/Ci/Cic from 9/00 production to present

No subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 71141, BMW Part No. 83 22 9 407 807.

E39

525i/iT from 3/01 production to present

530i from 3/01 production to present

No subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 71141, BMW Part No. 83 22 9 407 807.

A5S 440Z (5HP24)

E31

840Ci from 9/96 to the present

No subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 71141, BMW Part No. 83 22 9 407 807.

E38

740i/iL from 1/97 production to present

No subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 71141, BMW Part No. 83 22 9 407 807.

E39

540i/iT from 1/97 production to present

No subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 711 41, BMW Part No. 83 22 9 407 807.

E53

X5 4.4i from 9/99 production to present

X5 4.6i from 9/01 production to present

No subsequent transmission fluid changes are necessary. Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 711 41, BMW Part No. 83 22 9 407 807.

A5S 560Z (5HP30)

E31

840Ci equipped with M60 engine

Utilizes a lifetime fill of transmission fluid, no subsequent oil changes are necessary on this transmission. If transmission fluid is required for repair purposes, use only the oil approved for this transmission. It is not permitted to mix this oil with other grades of transmission fluid.

Shell LA 2634, BMW Part No. 83 22 9 407 765.

E31

840Ci equipped with M62 engine

850Ci equipped with M73 Engine

Utilizes lifetime fill of transmission fluid, no subsequent transmission fluid changes are necessary.

Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 711 41, BMW Part No. 83 22 9 407 807.

E32

740i/iL from 1993 through 1994 production

Utilizes a lifetime fill of transmission fluid, no subsequent oil changes are necessary on this transmission. If transmission fluid is required for repair purposes, use only the oil approved for this transmission. It is not permitted to mix this oil with other grades of transmission fluid.

Shell LA 2634, BMW Part No. 83 22 9 407 765.

E34

540i/iT from 1993 through 1995 production

Utilizes a lifetime fill of transmission fluid, no subsequent oil changes are necessary on this transmission. If transmission fluid is required for repair purposes, use only the oil approved for this transmission. It is not permitted to mix this oil with other grades of transmission fluid.

Shell LA 2634, BMW Part No. 83 22 9 407 765.

Effective with model year 1995 and later:

E31

850Ci from 10/94 to 6/97 production

840Ci from 12/95 to 8/96 production

Utilizes lifetime fill of transmission fluid, no subsequent transmission fluid changes are necessary.

Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 711 41, BMW Part No. 83 22 9 407 807.

E38

750iL from 1/95 production to present

740i/iL from 7/94 to 12/96 production

Utilizes lifetime fill of transmission fluid, no subsequent transmission fluid changes are necessary.

Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 711 41, BMW Part No. 83 22 9 407 807.

E39

540i/iT from 3/96 to 12/96 production

Utilizes lifetime fill of transmission fluid, no subsequent transmission fluid changes are necessary.

Never mix any other oil with this transmission fluid when doing repairs or topping up.

ESSO LT 711 41, BMW Part No. 83 22 9 407 807.

GA6HP19Z

E82/E88, E90/91/92

325i, 328i, 330i, 335i, All

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

E60/61

525i, 530i from 8/03 production to present

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

GA6HP19ZTU

E70 3.0i from start production to present

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

GA6HP26Z

E60

545i from 8/03 production to present

550i All

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

E63, E64

645Ci, 645CiC from start of production to present

650Ci, 650CiC All

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

E65

745i from 11/2001 production to present

750i All

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any

other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

E66

745Li from 3/2002 production to present

750Li All

760Li from 9/2002 production to present

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

GA6HP26ZTU

E70

X5 4.8i from start production to present

The transmission fluid has a Condition Based Service interval of approximately 100,000 miles. Never mix any other oil with this transmission fluid when doing repairs or topping up.

Shell M-1375.4, BMW Part No. 83 22 0 142 516.

4.0 CHECKING TRANSMISSION FLUID LEVEL

Due to the substantial expansion of transmission fluid when heated it is only possible to measure the oil level correctly at specified oil temperatures (after driving a distance of about 12 mi./20 km). All transmissions should be checked between a

ZF 3HP and 4HP

Due to the substantial expansion of transmission fluid when heated it is only possible to measure the oil level correctly at specified oil temperatures (after driving a distance of about 12 mi./20 km).

A5S 560Z, A5S440Z, GA6HP19Z, GA6HP26Z, GA6HP26Z, A5S325Z, A5S 310Z

All 5 and 6 speed transmissions require the fluid to be checked when fluid temperature is between 30-50° Celsius using DIS Plus or GT1. Do not check fluid level after temperature has exceeded 50° Celsius.

A4S 270R, A4S 310R and A5S 360R

See appropriate AUTOMATIC TRANSMISSION article for fluid level check procedure. These transmissions

generally do not have a dipstick and fluid level check (if necessary) must be performed through the oil fill hole.

Automatic Transmission - Repair Instructions - X3

00 TRANSMISSION ASSEMBLY

00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Pour oil only into appropriately marked containers
- Do not pour oil into drinking vessels (drinks bottles, glasses, cups or mugs)
- Observe country-specific safety regulations

First aid measures:

- Do not induce vomiting.

If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

If the person affected is unconscious, do not administer anything by mouth, place the person in the recovery position and seek immediate medical attention.

00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear protective goggles
- Wear oil-resistant protective gloves
- Observe country-specific safety regulations

First aid measures:

- Eye contact: Rinse eyes immediately with plenty of water for at least 15 minutes; if available, use an eye-rinsing bottle. If irritation of the eyes persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

NOTE: Do not use solvents/thinners.

00 SAFETY INSTRUCTIONS FOR HANDLING OIL

**WARNING: Danger of poisoning if oil is ingested/absorbed through the skin!
Risk of injury if oil comes into contact with eyes and skin!**

Recycling:

Observe country-specific waste-disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

NOTE: Do not flush oil away with water or aqueous cleaning agents.

00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R)

**IMPORTANT: Use only the approved transmission fluid.
Failure to comply with this requirement will result in serious damage to the**

automatic transmission!

Remove exhaust system bracket (1).

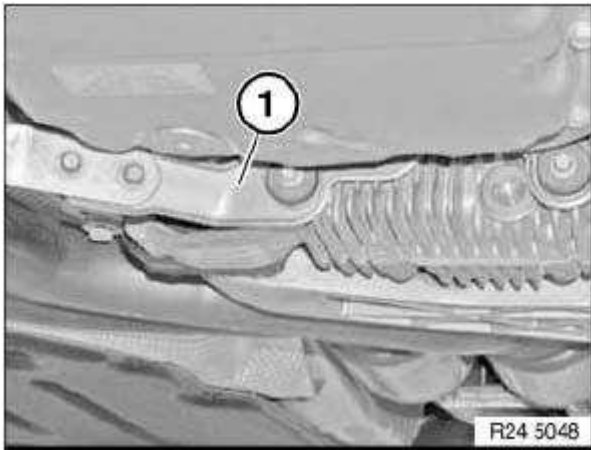

Fig. 1: Exhaust System Bracket

Courtesy of BMW OF NORTH AMERICA, INC.

Topping up transmission fluid after a repair:

Stand vehicle on a level surface and secure against rolling off.

Undo filler plug (1).

Installation:

Replace sealing ring.

Top up transmission fluid until it emerges from filling orifice.

Start engine.

Replenish transmission fluid until it emerges from filling orifice.

Screw in filler plug (1).

Tightening torque: 24 11 7AZ, see **24 11 TRANSMISSION HOUSING, TRANSMISSION OIL SUMP** .

Press brake pedal to floor and shift through all gears several times at idle speed. Then shift to "P" position (Park).

Then check fluid level.

Fig. 2: Filler Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Checking fluid level:

- Connect BMW Diagnosis and Information System (DIS) to vehicle.
- Call up Service functions (drive).
- Carry out fluid level check in accordance with instructions.

23 .. UNIVERSAL TRANSMISSION BRACKET

Special tools required:

- 00 2 030
- 23 0 132 , see **23 MANUAL TRANSMISSION**
- 23 4 050 , see **23 MANUAL TRANSMISSION**

NOTE:

- The universal transmission bracket is introduced for the E60 AWD
- Suitable for manual and automatic transmissions

IMPORTANT: Front and rear supports (1) can be laterally adjusted by means of screws (2).
Carrier (3) of rear supports (1) can be longitudinally adjusted by means of screw.
Supports must be adapted in length and width to the transmission.

Fig. 3: Rear Supports, Screws And Carrier
Courtesy of BMW OF NORTH AMERICA, INC.

Supporting transmission:

Support transmission with special tools 23 4 050, 23 0 132 , 00 2 030 .

IMPORTANT: Transmission must be secured with tensioning strap (1).

Fig. 4: Special Tools (23 4 050), (23 0 132) And (00 2 030)
Courtesy of BMW OF NORTH AMERICA, INC.

23 UNIVERSAL TRANSMISSION RETAINING BRIDGE

Special tools required:

- 00 1 450
- 24 0 200 SUPPORT

NOTE: ○ The transmission retaining bridge 24 0 200 is suitable for both manual and automatic transmissions

**IMPORTANT: Adapters and spindles must be adapted for positive locking to the transmission.
(Risk of injury)**

Adapt adapters (1) and spindle with thrust piece (3) to transmission.

Adapt length with slide (2).

Screw in spindle (4).

IMPORTANT: Before mounting on assembly stand 00 1 450 , check retaining bridge for secure seating.

Fig. 5: Adapters, Thrust Piece Spindle And Special Tool (24 0 200)
Courtesy of BMW OF NORTH AMERICA, INC.

24 00 018 ADJUSTING SELECTOR LEVER (A5S 360R / 390R, A4S 200R, 6HP26Z/19Z)

NOTE: **Check cable for ease of movement.
Move selector lever to "P" position.**

Grip clamping sleeve (1).

Slacken nut (2).

Press selector lever (3) forwards into park position. Press cable (4) in direction of arrow and release again.

Grip clamping sleeve (1).

Tighten down nut (2).

Tightening torque 25 16 2AZ , see 25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION .

Fig. 6: Clamping Sleeve, Nut And Selector Lever
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Move selector lever to "P" position.

Check whether parking gear is engaged by turning propeller shaft.

24 00 018 ADJUSTING SELECTOR LEVER (GA6L45R) AWD

NOTE: **Check cable for ease of movement.**
 Move selector lever to "P" position.

Grip clamping sleeve (1).

Loosen nut (2).

Press selector lever (3) forward into park position. Press cable (4) in direction of arrow, then release again.

Grip clamping sleeve (1).

Tighten nut (2).

Tightening torque, 25 16 2AZ. , see 25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION

Fig. 7: Clamping Sleeve, Nut, Selector Lever And Cable
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Move selector lever to "P" position.

Check whether parking gear is engaged by turning propeller shaft.

24 00 018 ADJUSTING SELECTOR LEVER (GA6L45R)

NOTE: Check cable for ease of movement. Move selector lever to "P" position.

Grip clamping sleeve (1). Slacken nut (2). Press selector lever (3) forwards into park position. Press cable (4) in direction of arrow and release again. Grip clamping sleeve (1). Tighten down nut (2). Tightening torque, see 25 16 2AZ in **25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION** .

Fig. 8: Press Cable (4) In Direction Of Arrow And Release Again
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Move selector lever to "P" position. Check whether parking gear is engaged by turning propeller shaft.

24 00 032 REMOVING AND INSTALLING AUTOMATIC TRANSMISSION (GA6L45R)

Special tools required:

See **MAINTENANCE AND GENERAL INFORMATION - SPECIAL TOOLS** , **23 MANUAL TRANSMISSION** , **24 AUTOMATIC TRANSMISSION**

- 00 2 030
- 00 9 010
- 00 9 120
- 00 9 130
- 23 0 132
- 23 4 050
- 24 1 110
- 24 2 390
- 24 4 160
- 24 4 161
- 24 4 166

IMPORTANT: After completion of work, check transmission fluid level, see **00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R)** .

Use only the approved transmission fluid .

Failure to comply with this requirement will result in serious damage to the automatic transmission!

IMPORTANT: Aluminium-magnesium materials.

No steel screws/bolts may be used due to the threat of electrochemical corrosion.

A magnesium crankcase requires aluminium screws/bolts exclusively.

Aluminium screws/bolts must be replaced each time they are released .

The end faces of these screws/bolts are painted blue for the purposes of reliable identification.

Jointing torque and angle of rotation must be observed without fail (risk of damage) .

Necessary preliminary tasks:

- Disconnect battery negative lead, see **THE BATTERY** .
- Remove underbody protection with bracket at front and rear.
- Remove reinforcement plate

- Remove complete exhaust system
- Remove heat shields
- Remove front propeller shaft at transfer box and tie to one side
- Support engine with lifter when removing transmission

Release bolts (1).

Remove bracket and heat shield.

Unclip lines (2).

Remove bracket (3).

Fig. 9: Bolts, Lines And Bracket
Courtesy of BMW OF NORTH AMERICA, INC.

Disconnect plug connector (1).

Release screws (2).

Remove retaining plate (3).

Tightening torque: 24 00 2AZ, see **24 00 TRANSMISSION IN GENERAL** .

Fig. 10: Plug Connector, Screws And Retaining Plate
Courtesy of BMW OF NORTH AMERICA, INC.

Release aluminium screws on right next to cable retaining plate with special tool 00 9 010 .

Blue aluminium screws/bolts must be replaced.

Tightening torque: 24 00 2AZ, see **24 00 TRANSMISSION IN GENERAL** .

Fig. 11: Special Tool (00 9 010)
Courtesy of BMW OF NORTH AMERICA, INC.

Grip clamping sleeve (1).

Loosen nut (2).

Release screws (3).

Remove cable (4).

Tightening torque: 25 16 1AZ, see **25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION** .

Installation:

Adjust selector lever, see 24 00 018 Adjusting selector lever (A5S 360R / 390R, A4S 200R, 6HP26Z/19Z).

Fig. 12: Clamping Sleeve, Nut, Screws And Cable
Courtesy of BMW OF NORTH AMERICA, INC.

Release screw (1).

Disconnect hydraulic lines (2) to transmission fluid cooler.

Installation:

Replace sealing rings.

Fig. 13: Screws And Hydraulic Lines
Courtesy of BMW OF NORTH AMERICA, INC.

Release nut (1) and bracket from transmission oil lines on oil sump.

Fig. 14: Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Detach plugs (1) and (2) from servomotor.

Fig. 15: Plugs And Servomotor
Courtesy of BMW OF NORTH AMERICA, INC.

Supporting transmission:

Support transmission with special tools 23 4 050, 23 0 132 and 00 2 030 .

Secure transmission with tensioning strap (1).

Tasks are described in Transmission bracket, see **23 .. UNIVERSAL TRANSMISSION BRACKET** .

After completion of work, check transmission oil level.

Fig. 16: Special Tools (23 4 050), (23 0 132) And (00 2 030)
Courtesy of BMW OF NORTH AMERICA, INC.

- Remove propeller shaft from transmission.
- Release center bearing.
- Tie propeller shaft to one side.

Tasks are described in Removing propeller shaft, see **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .

IMPORTANT: Do not allow propeller shaft to hang from fixed ball joint (risk of damage) .

Unfasten screws and remove transmission cross-member.

Tightening torque: 24 71 1AZ, see **24 71 TRANSMISSION MOUNTS** .

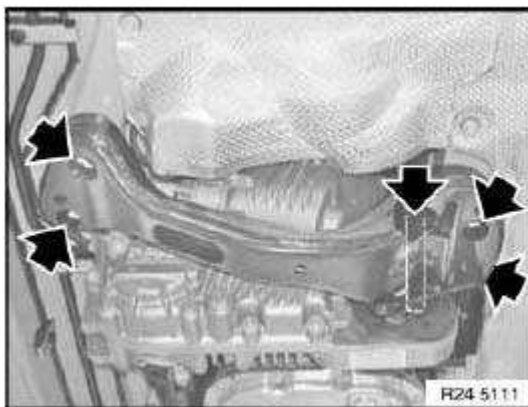

Fig. 17: Locating Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Crank engine at vibration damper in direction of rotation until screw (1) is visible in opening.

Release all screws of torque converter with special tool 24 1 110 .

Crank engine further and release remaining 5 bolts.

Tightening torque: 24 40 1AZ, see **24 40 TORQUE CONVERTER** .

Fig. 18: Screw

Courtesy of BMW OF NORTH AMERICA, INC.

Prepare special tool (1) 24 4 161 with shaped piece (2) 24 4 166.

Fig. 19: Special Tool (24 4 161) And Shaped Piece

Courtesy of BMW OF NORTH AMERICA, INC.

Insert special tool 24 4 160 into opening of transmission housing and tensions slightly with screw (1).

Raise by turning screw (2) and clamp down.

Then tighten down screw (1).

Fig. 20: Screws And Special Tool (24 4 161)
Courtesy of BMW OF NORTH AMERICA, INC.

- Unlock and disconnect plug (1) by turning.
- Do not touch pins.
- Release cable from retainers.
- Insert special tool 24 2 390 in sealing sleeve.

Operations are described in

Notes on mechatronics, see **24 34 561 Notes on mechatronics (GA6L45R)**.

IMPORTANT: Read and comply with important note.

Fig. 21: Disconnecting Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws.

Installation:

Observe **screw fastening sequence** without fail.

Tightening torque: 24 00 1AZ, see **24 00 TRANSMISSION IN GENERAL** .

Aluminium screws **must** be replaced.

Tightening torque: 24 00 2AZ, see **24 00 TRANSMISSION IN GENERAL** .

Fig. 22: Screw Fastening Sequence
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Tighten down screws/bolts to specified torque.

Secure special angle of rotation tool 00 9 120 with magnet 00 9 130 to underbody and screw down blue aluminium screws/bolts in accordance with angle of rotation.

Tightening torque: 24 00 2AZ, see **24 00 TRANSMISSION IN GENERAL** .

Fig. 23: Special Tools (00 9 120) And (00 9 130)

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Bore (1) in driving disk must be accessible from opening on engine oil pan.

Fig. 24: Bore In Driving Disk

Courtesy of BMW OF NORTH AMERICA, INC.

Check that dowel sleeves are correctly seated.

Replace damaged dowel sleeves.

Fig. 25: Dowel Sleeves

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Rotate torque converter until bore in torque converter is flush with bore in driving disk.

Flange automatic transmission to engine.

24 00 050 INSTALLING REPLACEMENT TRANSMISSION (GA6L45R)

Drain automatic transmission fluid at oil drain plug.

Tightening torque: 24 11 6AZ, see 24 11 TRANSMISSION HOUSING, TRANSMISSION OIL SUMP .

Recycling:

Catch and dispose of escaping transmission fluid.

Observe country-specific waste-disposal regulations

IMPORTANT:

- **Before installing replacement transmission, always flush transmission fluid cooler together with lines, see 17 21 500 FLUSHING OIL COOLER WITH LINES (AUTOMATIC TRANSMISSION) .**
- **After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) .**

Replacement transmission is supplied filled with transmission fluid.

Use only the approved transmission fluid .

Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove transfer case (AWD), see 27 10 010 REMOVING AND INSTALLING TRANSFER CASE (ATC 400 X-DRIVE) .
- Remove automatic transmission, see 24 00 032 Removing and installing automatic transmission (GA6L45R).

Remove transportation lock (1).

Convert all cable holders.

Convert all seal plugs.

Remove protective cap on output shaft.

IMPORTANT: After removing transportation lock, secure torque converter against slipping out.

Transmission identification:

- on type plate

Fig. 26: Transportation Lock

Courtesy of BMW OF NORTH AMERICA, INC.

11 TRANSMISSION CASE, OIL SUMP

24 11 007 REPLACING SEALING PLUG (GA6L45R)

Special tools required:

- 24 4 340 (Lever)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks: Remove rear underbody protection.

Remove holder (2).

Fig. 27: Remove Holder (2)

Courtesy of BMW OF NORTH AMERICA, INC.

Unlock sealing plug with special tool 24 4 340 in direction of arrow and remove.

Fig. 28: Unlock Sealing Plug With Special Tool 24 4 340

Courtesy of BMW OF NORTH AMERICA, INC.

24 11 011 REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION SUMP (GA6L45R)

IMPORTANT: Remove transmission sump only after it has cooled down.

After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) .

Use only the approved transmission fluid. See AUTOMATIC TRANSMISSION - OPERATING FLUIDS . .

Failure to comply with this requirement will result in serious damage to the automatic transmission!

Recycling:

Catch and dispose of escaping transmission fluid.

Observe country-specific waste-disposal regulations.

Necessary preliminary tasks:

Remove rear underbody protection.

Remove exhaust system bracket from transmission.

Remove oil drain plug (1).

Tightening torque: 24 11 6AZ, see **24 11 TRANSMISSION HOUSING, TRANSMISSION OIL SUMP** .

Drain automatic transmission fluid.

Installation:

Replace oil drain plug.

Fig. 29: Oil Drain Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew all bolts.

Remove transmission sump (1).

Installation:

Screw in bolts (1 to 17) in specified order until bolt heads make contact.

Tightening torque: 24 11 5AZ, see **24 11 TRANSMISSION HOUSING, TRANSMISSION OIL SUMP** .

Fig. 30: Tightening Sequence Of Bolts
 Courtesy of BMW OF NORTH AMERICA, INC.

Clean sump magnet (1) and check for metal filings/borings.

Remove gasket (2) from transmission sump.

Clean sealing faces and groove with a cloth.

Insert new gasket in transmission sump groove.

IMPORTANT: Do not degrease transmission sump with cleaning agent.

Fig. 31: Sump Magnet And Gasket
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

The gasket is correctly installed when it is engaged in the locating openings of the transmission sump.

Fig. 32: Locating Openings Of Transmission Sump
Courtesy of BMW OF NORTH AMERICA, INC.

24 11 665 REMOVING AND INSTALLING/REPLACING TRANSMISSION OIL FILTER (GA6L45R)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove transmission fluid sump.

Remove transmission oil filter (1) with a suitable tool (2). Installation: Replace oil filter gasket.

Fig. 33: Remove Transmission Oil Filter (1) With A Suitable Tool (2)
Courtesy of BMW OF NORTH AMERICA, INC.

24 11 666 REMOVING AND INSTALLING/REPLACING TRANSMISSION OIL FILTER GASKET (GA6L45R)

Special tools required:

- 13 5 250
- 24 4 390
- 24 4 400

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks: Remove transmission oil filter.

Pull transmission oil filter gasket out of housing with special tools 24 4 390 and 13 5 250.

Fig. 34: Pull Transmission Oil Filter Gasket Out Of Housing With Special Tools 24 4 390 And 13 5 250
Courtesy of BMW OF NORTH AMERICA, INC.

Drive transmission filter gasket into housing with special tool 24 4 400.

Fig. 35: Drive Transmission Filter Gasket Into Housing With Special Tool 24 4 400
Courtesy of BMW OF NORTH AMERICA, INC.

13 EXTENSION HOUSING, BEARINGS, SEAL

24 13 014 REPLACING OUTPUT FLANGE RADIAL SHAFT SEAL (GA6L45R) AWD

Special tools required:

- 24 4 320
- 24 4 330

IMPORTANT: After completion of work, check transmission fluid level, see **00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R)** . Use only approved transmission oil, see **00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R)** . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove rear underbody protection.
- Remove exhaust system.
- Remove heat shields.
- Support **transmission**.
- Remove transmission cross-member. See **22 32 050 REPLACING CROSS-MEMBER FOR TRANSMISSION MOUNTING** .
- Remove transfer box. See **27 10 010 REMOVING AND INSTALLING TRANSFER CASE (ATC 400 X-DRIVE)** .

Mount special tool 24 4 320 and secure with hook wrench (1). Screw in spindle (2) until radial shaft seal is released.

Fig. 36: Mount Special Tool 24 4 320 And Secure With Hook Wrench (1)
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: Coat sealing lips of new radial shaft seal with clean transmission oil. Drive in radial shaft seal with special tool 24 4 330 until it stops.

Fig. 37: Drive In Radial Shaft Seal With Special Tool 24 4 330
Courtesy of BMW OF NORTH AMERICA, INC.

24 13 014 REPLACING OUTPUT FLANGE SHAFT SEAL (GA6L45R)

Special tools required:

- 23 0 020
- 23 1 210
- 24 4 360
- 24 4 370

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237

CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237
CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove underbody protection.
- Remove heat shields.
- Remove complete exhaust system
- Remove front muffler (N45T/N46T)
- Remove transmission cross-member

Remove propeller shaft from transmission. Release centre bearing. Tie propeller shaft to one side. Tasks are described in **.26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY .**

NOTE: To rotate propeller shaft, unlock parking gear.

Release screws. Remove transmission bearing block (1). Tightening torque, see 24 71 6AZ in **24 13 TRANSMISSION EXTENSION, BEARINGS, SEALS .**

Fig. 38: Remove Transmission Bearing Block (1)
Courtesy of BMW OF NORTH AMERICA, INC.

Grip output flange (1) with special tool 23 0 020. Release nut with special tool 23 1 210. Tightening torque, see 24 13 3AZ in **24 13 TRANSMISSION EXTENSION, BEARINGS, SEALS .** Installation: Apply a streak of Loctite 277 over complete thread width. Replace nut and secure with a mandrel (8 mm) by caulking.

Fig. 39: Grip Output Flange (1) With Special Tool 23 0 020
Courtesy of BMW OF NORTH AMERICA, INC.

Detach output flange from output shaft. Remove spacer.

Push special tool 24 4 360 onto output shaft (1). Locking hooks (2) must enter completely.

Fig. 40: Locking Hooks (2) Must Enter Completely
Courtesy of BMW OF NORTH AMERICA, INC.

Turn locks (1) counterclockwise. Screw in bolt (2) until radial shaft seal is released.

Fig. 41: Screw In Bolt (2) Until Radial Shaft Seal Is Released
 Courtesy of BMW OF NORTH AMERICA, INC.

Oil sealing lip on radial shaft seal (1). Drive radial shaft seal (1) firmly home with special tool 24 4 370.

Fig. 42: Oil Sealing Lip On Radial Shaft Seal (1)
 Courtesy of BMW OF NORTH AMERICA, INC.

14 MECHANICAL ATTACHMENTS

24 14 005 REPLACING SEALING CAP FOR SELECTOR SHAFT (GA6L45R)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove rear underbody protection. See **51 47 491 REMOVING AND INSTALLING/REPLACING REAR UNDERBODY PROTECTION** .
- Remove front propeller shaft from transfer case and tie to one side. Tasks are described in **REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY**

Screw special tool 23 0 490 into sealing cap. Drive out sealing cap with impact weight (1).

Fig. 43: Drive Out Sealing Cap With Impact Weight (1)
 Courtesy of BMW OF NORTH AMERICA, INC.

Place new sealing cap (1) on drift (2).

NOTE: Drift (2) for driving in sealing cap is contained in repair kit.

Fig. 44: Place New Sealing Cap (1) On Drift (2)
 Courtesy of BMW OF NORTH AMERICA, INC.

Drive in new sealing cap (1) with drift (2) as far as it will go.

Fig. 45: Drive In New Sealing Cap (1) With Drift (2)
Courtesy of BMW OF NORTH AMERICA, INC.

24 14 003 REPLACING SELECTOR SHAFT SEAL (GA6L45R)

Special tools required:

- 24 4 381
- 24 4 382
- 24 5 361
- 24 5 362

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks: Remove heat shields.

Slacken nut (1). Take off holder (2). Tightening torque 24 51 1AZ. After completing work: Adjust shift lever.

Fig. 46: Slacken Nut (1) And Take Off Holder (2)
Courtesy of BMW OF NORTH AMERICA, INC.

Screw in special tool 24 5 361 until it is firmly connected with shaft seal.

Fig. 47: Screw In Special Tool 24 5 361
Courtesy of BMW OF NORTH AMERICA, INC.

Screw special tool 24 5 362 onto special tool 24 5 361 and tighten down. This pulls the shaft seal out of the transmission housing.

Fig. 48: Screw Special Tool 24 5 362 Onto Special Tool 24 5 361
Courtesy of BMW OF NORTH AMERICA, INC.

Oil sealing lip on shaft seal. Screw in shaft seal with special tools 24 4 381 and 24 4 382 as far as it will go.

Fig. 49: Screw In Shaft Seal With Special Tools 24 4 381 And 24 4 382
Courtesy of BMW OF NORTH AMERICA, INC.

31 OIL PUMP

24 31 575 REPLACING OIL PUMP O-RINGS (GA6HP26/19Z)

Special tools required:

- 24 1 180
- 24 1 184

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237

CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove automatic transmission
- Secure transmission with transmission holding bridge on assembly stand. See **23 UNIVERSAL TRANSMISSION RETAINING BRIDGE** .
- Remove **torque converter**
- Remove **mechatronics**

Remove adapter (1). Installation: Note installation position.

Fig. 50: Remove Adapter (1)

Courtesy of BMW OF NORTH AMERICA, INC.

Release screws. Tightening torque, see 24 31 3AZ in .

Fig. 51: Identifying Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Slide special tool 24 1 184 completely into puller 24 1 180.

Fig. 52: Slide Special Tool 24 1 184 Completely Into Puller 24 1 180

Courtesy of BMW OF NORTH AMERICA, INC.

Attach special tool 24 1 180 and secure with screw (1). Insert screw (2) and release oil supply unit from transmission housing.

Fig. 53: Insert Screw (2) And Release Oil Supply Unit From Transmission Housing

Courtesy of BMW OF NORTH AMERICA, INC.

Release screws. Tightening torque 24 31 1AZ.

Fig. 54: Identifying Screws
 Courtesy of BMW OF NORTH AMERICA, INC.

Detach cover (1) from pump body (2). Replace O-rings (3 + 4). Installation: Pay attention to installation position of gears during disassembly.

Fig. 55: Detach Cover (1) From Pump Body (2)
 Courtesy of BMW OF NORTH AMERICA, INC.

24 31 012 REPLACING TORQUE CONVERTER RADIAL SHAFT SEAL (GA6L45R)

Special tools required:

- 00 1 450 .
- 24 0 200 .
- 24 2 351 .
- 24 2 352 .
- 24 2 354 .
- 24 2 360 .

Necessary preliminary tasks:

- Remove automatic transmission

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Secure transmission with special tool 24 0 200 on assembly stand 00 1 450 . Remove torque converter .

Fig. 56: Secure Transmission With Special Tool 24 0 200
Courtesy of BMW OF NORTH AMERICA, INC.

Remove retaining ring (1) with a suitable tool (2).

Fig. 57: Remove Retaining Ring (1) With A Suitable Tool (2)
Courtesy of BMW OF NORTH AMERICA, INC.

Attach special tool 24 2 354 to input shaft (1).

Fig. 58: Attach Special Tool 24 2 354 To Input Shaft (1)
Courtesy of BMW OF NORTH AMERICA, INC.

Screw in special tool 24 2 351 until it is firmly connected with radial shaft seal. Screw in special tool 24 2 352 to remove radial shaft seal.

Fig. 59: Screw In Special Tool 24 2 352 To Remove Radial Shaft Seal
Courtesy of BMW OF NORTH AMERICA, INC.

Oil sealing lip on radial shaft seal. Drive in radial shaft seal (1) with special tool 24 2 360 as far as it will go.

Fig. 60: Drive In Radial Shaft Seal (1) With Special Tool 24 2 360
Courtesy of BMW OF NORTH AMERICA, INC.

33 GEAR SELECTOR VALVE

24 33 530 REPLACING GEAR SELECTOR VALVE (GA6L45R)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove mechatronics.

Release screw (1). Place gear position switch (2) to one side. Tightening torque 24 30 1AZ, see 24 30 HYDRAULIC / ELECTRIC CONTROL PARTS AND CONTROLLING ELEMENTS .

Fig. 61: Place Gear Position Switch (2) To One Side
 Courtesy of BMW OF NORTH AMERICA, INC.

Slightly press bracket (1) upwards. Using suitable tool (2) push gear selector valve (3) out of the mechatronics system.

Fig. 62: Slightly Press Bracket (1) Upward
 Courtesy of BMW OF NORTH AMERICA, INC.

34 SHIFT VALVES, PARKING

24 34 561 NOTES ON MECHATRONICS (GA6L45R)

Special tools required:

- 24 2 390 , see **24 AUTOMATIC TRANSMISSION** .

IMPORTANT: After completing work:

- Load specific data version with DIS

- After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) .

Use only approved transmission fluid .

Failure to comply with this requirement will result in serious damage to the automatic transmission!

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTROSTATIC DISCHARGE) .

Unscrew plug (1) and disconnect.

Fig. 63: Disconnecting Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Insert special tool 24 2 390 in sealing sleeve (1).

Fig. 64: Inserting Special Tool (24 2 390) In Sealing Sleeve

Courtesy of BMW OF NORTH AMERICA, INC.

24 34 562 REPLACING MECHATRONICS (GA6L45R)

Special tools required:

- 24 2 390
- 24 4 350

NOTE: After completing work:

- Load specific data version with DIS.

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) .

Use only approved transmission fluid .

Failure to comply with this requirement will result in serious damage to the automatic transmission!

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTRO STATIC DISCHARGE) .

Necessary preliminary tasks:

- Remove heat shields.
- Support automatic transmission with hydraulic lifter.
- Remove transmission cross-member.

Grip clamping sleeve (1).

Loosen nut (2).

Detach retainer (3) towards bottom using a screwdriver.

Pull cable (4) out of holder.

Installation:

Adjust selector lever.

Fig. 65: Clamping Sleeve, Nut, Retainer And Cable
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Mechatronics can be destroyed by static discharges. Therefore the contacts inside the plug must not be touched. Insert special tool immediately after work step.

Unscrew plug (1) and disconnect.

Fig. 66: Disconnecting Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Insert special tool 24 2 390 in sealing sleeve (1).

Fig. 67: Inserting Special Tool (24 2 390) In Sealing Sleeve
Courtesy of BMW OF NORTH AMERICA, INC.

Remove transmission oil sump.

Unlock sealing sleeve with slide (1).

Fig. 68: Unlocking Sealing Sleeve With Slide
Courtesy of BMW OF NORTH AMERICA, INC.

Note position of sealing sleeve.

Pull out sealing sleeve (1).

Installation:

Screw in sealing sleeve partially (lug in upper area). Turn until lug engages in groove of transmission. Slide in sealing sleeve.

Lug on sealing sleeve must not be damaged!

Fig. 69: Pulling Out Sealing Sleeve
Courtesy of BMW OF NORTH AMERICA, INC.

Release all bolts (1) with special tool 24 4 350.

Remove mechatronics.

Fig. 70: Bolts
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Replace gasket (1).

Coat new seals with automatic transmission fluid and install.

Fig. 71: Gasket
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Replace gaskets (1).

Coat new seals with automatic transmission fluid and install.

Fig. 72: Gasket
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Tighten down bolts in sequence (1 to 6).
Failure to comply with this requirement will result in serious damage to the automatic transmission!
Tightening torque: 24 30 1AZ, see 24 30 HYDRAULIC / ELECTRIC CONTROL PARTS AND CONTROLLING ELEMENTS .

Fig. 73: Tightening Sequence Of Bolts
 Courtesy of BMW OF NORTH AMERICA, INC.

35 WIRING HARNESS, SHIFT ELEMENTS AND SENSORS

24 35 700 REMOVING AND INSTALLING/REPLACING INPUT AND OUTPUT SPEED SENSOR (GA6L45R)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks: Remove mechatronics.

Unlock and disconnect plug (1). Release screws (2). Detach input and output speed sensor from mechatronics. Tightening torque, see 24 30 4AZ in 24 30 HYDRAULIC / ELECTRIC CONTROL PARTS AND CONTROLLING ELEMENTS .

Fig. 74: Unlock And Disconnect Plug (1), Release Screws (2)
Courtesy of BMW OF NORTH AMERICA, INC.

24 35 610 REMOVING AND INSTALLING/REPLACING TRANSMISSION POSITION SWITCH (GA6L45R)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Use only approved transmission oil, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) . Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks: Remove transmission oil filter.

Unlock and disconnect plug (1). Release screws (2). Remove transmission position switch (3). Tightening torque, see 24 30 1AZ in 24 30 HYDRAULIC / ELECTRIC CONTROL PARTS AND CONTROLLING ELEMENTS .

Fig. 75: Remove Transmission Position Switch (3)
Courtesy of BMW OF NORTH AMERICA, INC.

40 TORQUE CONVERTER

24 40 011 REMOVING AND INSTALLING/REPLACING TORQUE CONVERTER (GA6L45R)

Special tools required:

- 00 2 550
- 24 4 000

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION

(GA6L45R) .

Use only approved transmission oil .

Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove automatic transmission, see **24 00 032 Removing and installing automatic transmission (GA6L45R).**

Screw special tool 24 4 000 into torque converter.

Remove torque converter.

NOTE: When torque converter is removed, transmission oil flows out.

Fig. 76: Special Tool (24 4 000)

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

When installing, do not damage shaft seal and bearing.

If the torque converter is not correctly installed, the driver of the pump impeller may be damaged when the transmission is flanged to the engine.

Remove torque converter and set down vertically.

Fig. 77: Removing Torque Converter
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Push torque converter through shaft seal onto transmission shaft as far as it will go.

Press torque converter by hand into converter housing and turn in the process. Converter hub opening must snap into place in driver of pump impeller. Torque converter must be felt to slip inwards.

Determine distance between contact surface and surface (1) of tapped hole in torque converter with special tool 00 2 550 .

NOTE: Measured value must be greater than 25 mm.

Fig. 78: Special Tool (00 2 550)
Courtesy of BMW OF NORTH AMERICA, INC.

50 SHIFT FUNCTION

24 50 030 REPLACING SELECTOR SHAFT (GA6L45R)

IMPORTANT: After completion of work, check transmission fluid level, see 00 11 237 CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (GA6L45R) .

Use only approved transmission oil .

Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove mechatronics
- Remove selector shaft seal
- Remove transmission (AWD only)

Drive a metal pin (1) - dia. approx. 3 mm - into clamping pin (2) (to prevent clamping pin from being compressed). Grip clamping pin (2) with side nippers.

Fig. 79: Grip Clamping Pin (2) With Side Nippers
Courtesy of BMW OF NORTH AMERICA, INC.

Drive clamping pin (2) with a suitable tool out of selector shaft. Remove selector shaft.

Fig. 80: Drive Clamping Pin (2) With A Suitable Tool Out Of Selector Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

INTRODUCTION

The 6-speed automatic transmissions were jointly developed by BMW and ZF (Zahnradfabrik Friedrichshafen).

- > E53, E83, E85, E86
- > E60, E61, E63, E64 before 09/2005
- > E60, E61 from 09/2005 until 03/2007 and E63, E64 from 09/2005 until 09/2007
- > E60, E61 from 03/2007
- > E60, E61 from 06/2007 with sport automatic transmission and E63, E64 from 09/2007 with sport automatic transmission

- > E65, E66
- > E70
- > E81, E87, E90, E91, E92, E93

Depending on the model concerned, the automatic transmission is either standard or special equipment (option 205).

- > E60, E61 from 06/2007

From 06/2007, besides option 205 "Automatic transmission", option 2TB "Sport automatic transmission" is also available.

The special equipment "Sport automatic transmission" includes, amongst other features, gearshift paddles and a SPORT button.

- E63, E64 from 09/2007 Option 205 "Automatic transmission" is discontinued.

On E63, E64 vehicles, only option 2TB "Sport automatic transmission" is available. Depending on the model concerned, the "sport automatic transmission" is either standard or special equipment.

The sport automatic transmission differs from the automatic transmission as follows:

- Gearshift paddles on steering wheel
- SPORT button in the selector lever trim
- Sport program also possible in selector lever position "D"
- Separate gear selector switch (GWS)

So as to be compatible with the engines with higher torques, the automatic transmissions are designed with different strengths. The automatic transmissions thus differ, e.g. through different torque converters.

Depending on the engine fitted, the following 6-speed automatic transmissions are fitted:

- GA6HP19Z (designed for maximum torque of 400 Nm)
- GA6HP19Z TU (designed for maximum torque of 400 Nm)
- GA6HP26Z (designed for maximum torque of 600 Nm)
- GA6HP26Z TU (designed for maximum torque of 650 Nm)
- GA6HP32Z (designed for maximum torque of 750 Nm)

(technical updates, e.g. of transmissions, are indicated with the letters "TU".)

The automatic transmission requires 5 multi-plate clutches to shift between the 6 gears: 3 input clutches and 2 brake clutches.

Electric steering lock discontinued:

On vehicles with automatic transmission, the electric steering lock is discontinued as follows:

- E90, E91, E92, E93 from 12/2006 (US version only)
- E60, E61 from 03/2007
- E63, E64 from 09/2007
- E70 from start of series production

BRIEF DESCRIPTION OF COMPONENTS

The automatic transmission consists of the following components:

- **Mechatronics module**

The automatic transmission is controlled by the mechatronics module. The mechatronics module is a combination of hydraulic unit and electronics module.

The hydraulic control unit is the hydraulic part of the transmission control system.

The electronics module contains the EGS control unit, the sensors and the electrical connections within the transmission. (EGS is the abbreviation for electronic transmission control)

- **Selector lever, selector lever position display**

- > E53, E81, E83, E85, E86, E87, E90, E91, E92, E93
- > E60, E61 until 03/2007
- > E63, E64 until 09/2007

The selector lever has the following positions:

P for Park

R for Reverse

N for Neutral

D for Drive (= automatic mode)

M/S M for manual mode = Steptronic, S for sport program = automatic mode with sporty map

The selector lever position display is located in the selector lever trim.

- > E65, E66

The selector lever is located on the steering column.

The selector lever has the following positions:

p for Park

R for Reverse

N for Neutral

D for Drive (= automatic mode)

The selector lever position display is located in the instrument cluster.

○ **GWS: Gear selector switch**

- > E60, E61 from 03/2007
- > E63 from 09/2007
- > E70

The gear selector switch is configured as a control unit in its own right. With the gear selector switch, the transmission is no longer actuated mechanically, but rather electronically.

○ **SPORT button for Dynamic Driving Control**

- > E60, E61, E63, E64 with sport automatic transmission

Dynamic Driving Control (FDC) is activated with the SPORT button: Gearshift times are shortened and the shift characteristics are made more sporty. The engine responds more spontaneously to movements of the accelerator pedal. The steering and holding forces of the steering tuned for a sportier feel - for Servotronic or active front steering (AFS). AFS includes Servotronic.

- > E70

On the E70 with the option "Adaptive Drive", only the damping characteristics are changed (normal or sport).

○ **Steering wheel with buttons for sport program and manual mode**

- > E65, E66

The steering wheel has a button for selecting the program. The following drive programs can be selected in a predefined sequence: Sport program, manual mode or automatic mode.

The steering wheel also houses the buttons for changing up and down in manual mode.

Program selection and control in manual mode are described in the Owner's Handbook.

○ **Gearshift paddles**

Vehicles with gearshift paddles:

In addition to the sequential gear selection with the selector lever, the gears can also be selected using the

2 gearshift paddles on the steering wheel.

The shift pulse is transmitted electrically to the EGS control unit. With this gearshift method ("shift-by-wire") there is no mechanical linkage between the gearshift paddles and the transmission.

Pull one of the gearshift paddles briefly to change up a gear.

Press one of the gearshift paddles briefly to change down a gear.

○ **Instrument cluster display**

The drive ranges and drive program are displayed in the instrument cluster, the signal required for this is sent from the electronic transmission control.

○ **CID: Central Information Display**

- > E60, E61, E63, E64, E70, E81, E85, E86, E87, E90, E91, E92, E93

The CID displays detailed information about the Check-Control messages in the instrument cluster.

The instrument cluster controls these messages on the K-CAN (body CAN).

In addition to the visual display, the Check Control also alerts the driver with acoustic signals. Depending on the importance of the associated message, a single or double gong with varying volume and tone will sound. The instrument cluster controls these warnings by means of the K-CAN. Acoustic warnings are emitted by the M-ASK (multi-audio system controller) or CCC (Car Communication Computer).

○ **CD: Control display**

- > E65, E66

The control display is the central display for the information and communication system.

The control display is used as an interface between the MOST and K-CAN data buses. (MOST = "Media Oriented System Transport"; K-CAN = body controller area network".)

Amongst other things, detailed information about the Check-Control messages in the instrument cluster are displayed on the control display.

The instrument cluster controls these messages on the K-CAN (body CAN).

The electronic transmission control requires signals from the following components (in alphabetical order):

○ **Brake light switch**

The signal from the brake light switch is needed for the function of the selector lever lock and the adaptive transmission control.

○ **DME or DDE: Digital engine electronics or digital diesel electronics**

The DME or DDE sends messages about the current operating status of the engine to the EGS (e.g. engine speed or torque).

The EGS reports the current operating status of the transmission back to the DME or DDE.

○ **DSC: Dynamic Stability Control**

The DSC optimizes both driving stability when pulling away or accelerating and traction. Within the limitations of the laws of physics, DSC compensates for driving conditions such as over/understeering. As part of this process, dynamic driving signals (e.g. wheel rotation speed, lateral acceleration) are sent to the DSC control unit. DSC transmits the processed signals regarding cornering, acceleration and winter detection to the EGS control unit.

○ **Accelerator pedal module**

The signal from the accelerator pedal module is needed for the adaptive transmission control.

○ **JBE: Junction box electronics**

- > E70, E81, E87, E90, E91, E92, E93

The JBE is the data interface (= gateway) between the K-CAN and the PT-CAN. Signals from the F-CAN are simply looped through. (K-CAN = body CAN; PT-CAN = powertrain CAN; F-CAN = chassis CAN.)

The junction box consists of the JBE and the power distributor.

The power distributor provides power, amongst other things, for the gate pattern diagram and the EGS control unit.

○ **KGM: Body gateway module**

- > E60, E61, E63, E64 from 09/2005

From 09/2005, the vehicle electrical system has been modified. The body gateway module (KGM) supersedes the SGM.

The KGM is the data interface (= gateway) between the K-CAN and the PT-CAN. (K-CAN = body CAN; PT-CAN = powertrain CAN.) The diagnosis wire is connected to the KGM.

○ **SGM: Safety and gateway module**

- > E60, E61, E63, E64 up to 09/2005
- > E65, E66

The SGM is the data interface (= gateway) between the K-CAN, **byteflight** and the PT-CAN. (K-CAN = body CAN; PT-CAN = powertrain CAN.) The diagnosis wire is connected to the SGM.

SYSTEM FUNCTIONS

The automatic transmission has the following system functions:

- Adaptive transmission control
- Overlap control
- Starter inhibitor
- Parking lock
- Warming-up program
- Engine intervention
- Downshift inhibitor
- Reverse gear inhibitor
- Selector lever lock (shiftlock)
- Standstill decoupling
- Interlock
- Emergency program

Adaptive transmission control

As with earlier automatic transmissions, the 6-speed automatic transmissions offer the choice between a comfort program and a sport program.

The adaptive transmission control (component of electronic transmission control) adapts the shift characteristics of the comfort program and sport program to the driver's wish and the driving situation.

In both programs, the adaptive transmission control changes from a basic map to a performance - orientated map, as required:

- Comfort program in selector lever position "D"

The comfort program is based on 2 maps: The XE map (extreme economy) and the E map (economy). The EGS control unit normally selects the economical XE map (= basic map). In case of particular demands (e.g. load requirements), the system will change to the performance - orientated E map. If the input signals change in favor of a more gentle driving style, the system will change back to the more economical XE map.

- Sport program in selector lever position "M/S"

The sport program effects dynamic, sporty shift characteristics. In the sport program, there is the basic S map (sport) and the performance-orientated XS map (extreme sport). If an extremely dynamic driving style is called for, the system will change from the S map to the performance - orientated XS map.

The adaptive transmission control takes the following demands into account:

- Adaptation to driver type
- Driving uphill or trailer towing

- Driving downhill
- Braking deceleration and automatic upshift
- Winter program

Adaptation to driver type

The adaptation to different driver types is done using the following values:

○ Kick-fast

If the accelerator pedal is depressed rapidly, the shift program is changed accordingly. This is achieved by the detected accelerator-pedal value being compared with threshold values in the EGS control unit. The result of this comparison is the proposal of one of the two possible programs (XE or E in comfort program, S or XS in sport program).

○ Cornering detection

Cornering detection reacts to the vehicle's lateral acceleration with an indirect adaptation to the driver type.

Lateral acceleration is considered an indirect statement of the preferred driving dynamics and does not cause an immediate gearshift response (shifts when cornering could adversely affect driving stability).

Lateral acceleration is calculated from the signals from the wheel-speed sensors, from the yaw rate and road speed.

○ Brake evaluation

The braking action is evaluated in a similar way to "kick-fast".

The braking deceleration is measured and compared with threshold values in the EGS control unit. The result of this comparison is the proposal of one of the two possible programs (XE or E in comfort program, S or XS in sport program).

The driver-type adaptation is restarted each time the vehicle pulls away from a standstill.

Driving uphill or trailer towing

These functions are based on a comparison of actual car acceleration with a nominal value. From the current engine operating situation, the acceleration with normal load on a level surface is calculated. If the actual acceleration is significantly below the theoretical value, the "Driving uphill or trailer towing" function is activated.

The design of the corresponding shift characteristics allows a high-speed driving style. Undesirable upshifts and frequent up/downshifts are eliminated or greatly reduced.

Driving downhill

If the EGS control unit detects downhill driving, it will automatically shift down a gear if the vehicle's speed picks up. This enhances the engine's braking effect. A downshift is only effected if the engine speed is below the maximum speed of the lower gear.

The EGS control unit detects downhill driving on the basis of signals from the throttle valve potentiometer (load), wheel speed sensor (road speed) and brake light switch (brake activation).

Braking deceleration and automatic upshift

To decelerate the vehicle, the foot is taken off the gas and the brake depressed as necessary. The gearshift map triggers an upshift when the throttle is closed. These gearshifts are not necessary in conjunction with brake applications as they prevent the engine's braking effect from being exploited.

The intention to apply the brakes can often be anticipated from the accelerator pedal being rapidly released to the zero position. If such an action is detected, the upshift is suppressed for as long as the accelerator pedal is in the zero position and the vehicle is in overrun mode.

Winter program (only with selector lever in position "D")

The winter program is automatically activated if the drive wheels start to spin even at a low rate of acceleration. The winter program ensures better traction by not using 1st gear. Early upshifts reduced the reactions caused by load changes. The winter program is deactivated if the wheels do **not** spin for several seconds despite high drive torque.

Overlap control

Overlap control provides gentle shift characteristics as follows: With overlap control, several multi-plate clutches are in use at the same time. Here, pressure is reduced in the active multi-plate clutch and at the same time built up in the clutch that is about to be activated. The reduction and build-up of pressure is maintained until a synchronized speed is reached. At this point, the hydraulic pressure for the multi-plate clutch to be activated can be built up completely. Overlap control is active for all gearshifts from 1st to 6th gear and from 6th to 1st gear.

Starter inhibitor

It is only possible to start the engine when the selector lever is in position "P" or "N".

- > E53, E83, E85, E86

The EWS (electronic immobilizer) evaluates the following signal from the EGS (electronic transmission control) for the start:

- Selector lever position "P" or "N" as signal via the direct wire
- > E60, E61, E63, E64, E65, E66, E70, E81, E87, E90, E91, E92, E93

The CAS (Car Access System) evaluates the following signals from the EGS (electronic transmission control) for the start:

- Selector lever position "P" or "N" as CAN message via the powertrain CAN
- Selector lever position "P" or "N" as signal via the direct wire

In principle, the CAN message is used. If the message is incorrect or invalid, it switches to the signal from the direct wire.

Parking lock

The parking lock locks the transmission output shaft. The vehicle is prevented from rolling unexpectedly. The parking lock is designed to provide a reliable brake on gradients up to 32 %.

- > E53, E81, E83, E85, E86, E87, E90, E91, E92, E93
- > E60, E61 until 03/2007
- > E63, E64 until 09/2007

When the vehicle is stationary, the parking lock is engaged purely mechanically via the selector lever (Bowden cable from selector lever to mechatronics module).

- > E65, E66, E70
- > E60, E61 from 03/2007
- > E63, E64 from 09/2007

With the electric version of the parking lock, the parking lock is applied and electrically secured via a mechanical spring system in the transmission.

The parking lock is activated under the following conditions:

- Pressure on the button on the selector lever and roadspeed signal less than 2 km/h.
- Remote control removed from the insert compartment and roadspeed signal 0 km/h.
- Engine ON

and

Transmission position "D", "N" or "R"

and

Driver's door open

and

Driver's seat not occupied

(roadspeed signal less than 2 km/h).

The parking lock is only released when the engine is ON. Reason: Only when the engine is ON is there enough hydraulic pressure to open the parking lock (mechanical emergency release possible).

- > E65, E66, E70

If the parking brake (EMF = "electromechanical parking brake") fails, the parking lock can still be applied.

Example: A fault in the system prevents the parking brake from being moved from "Hold" to "Park". In this event, the EGS control unit will apply the parking lock after performing a plausibility check.

The locking conditions are as follows:

- Selector lever in position "N"
- Speed 0 km/h
- Engine OFF and ignition OFF

Warming-up program

The warming-up program is activated after each engine start with the engine temperature lower than approx. 60 °C. In the warming-up program, the automatic transmission remains in the performance-orientated map E or XS up to a certain temperature. Gearshift are only executed at higher speeds. This enables the engine and the catalytic converter to reach their operating temperatures more quickly.

Up to a transmission oil temperature of approximately 35 °C, the converter lockup clutch is neither controlled nor closed.

Engine intervention

During the gearshift, the EGS control unit emits signals to influence the digital engine electronics (DME) or digital diesel electronics (DDE).

The DME then retards the ignition timing for a few milliseconds.

The DDE reduces the fuel quantity for a few milliseconds by reducing the injection period.

This action briefly reduces the torque, improves shift quality, reduces the load on the transmission and shortens the shifting time.

Downshift inhibitor

A downshift inhibitor prevents the transmission shifting to a lower gear until the engine speed is below the maximum speed for the next gear down. The engine speed signal is transmitted by the DME/DDE to the EGS control unit.

The downshift inhibitor prevents damage to the engine and transmission.

Reverse gear inhibitor

The reverse gear inhibitor electronically prevents reverse gear from being engaged when the vehicle is moving forwards at speeds above 5 km/h (3 mph). When this road speed is exceeded, the corresponding solenoid valves are no longer actuated. This prevents multi-plate clutches B and D (for reverse gear) from being charged.

Selector lever lock (shiftlock)

- > E53, E60, E61, E63, E64, E81, E83, E85, E86, E87, E90, E91, E92, E93

The selector lever is locked in positions "P" and "N" by an electromagnet. The electromagnet is actuated by the EGS control unit. The selector lever lock is engaged when selector lever position "P" or "N" is detected and the ignition (terminal 15) is ON.

- Position change from selector lever position "P" or "N":

A position change is only possible at road speeds of less than 5 km/h and if the brake is applied at an engine speed of less than 2500 rpm.

Standstill decoupling (depends on national version)

The standstill decoupling of the torque converter decouples the torque converter from the drive when the vehicle is at a standstill. Thus only a minimum load remains, and fuel consumption is reduced. Decoupling is effected by a clutch regulation system (clutch A) within the transmission (depending on the load signal and output speed).

Interlock

- > E53, E83, E85, E86 and

E60, E61, E63, E64 up to 09/2005:

The ignition lock is mechanically linked to the selector lever by a Bowden cable (as on the E38). The interlock only allows the ignition key to be removed when the selector lever is in position P.

Conversely, the selector lever can only be moved from position "P" when the ignition key is in the ignition lock and turned at least to ignition ON.

- > E60, E61 from 03/2007 and

E63, E64 from 09/2007 and

E65, E66 and

E70

The remote control can only be removed when the CAS registers a roadspeed signal of less than 1 km/h. If the remote control is removed from the insert compartment after the engine has been switched OFF, the parking lock will automatically be applied.

- > E81, E87, E90, E91, E92, E93 and E60, E61 from 09/2005 until 03/2007 and E63, E64 from 09/2005 until 09/2007

The selector lever is locked in position P by an electromagnet when terminal 15 is OFF. When the remote control is not in the insert compartment, the selector lever is locked in position "P". When terminal 15 is activated, the EGS control unit applies current to the electromagnet and the selector lever is released. A microswitch registers the locking or unlocking of the selector lever. The microswitch transmits a signal to the CAS (Car Access System) to enable the remote control.

- Interlock **without** convenience access

If the selector lever is not engaged in position "P", the remote control cannot be removed from the insert compartment. The selector lever is locked when the selector lever is in position P and the ignition is OFF. The remote control can be removed.

- Interlock **with** convenience access

The engine and terminal 15 (ignition) can only be switched off when the selector lever is in position "P".

Emergency program

The emergency program is activated if the transmission management should fail or detect a malfunction that could lead to critical driving conditions. In the emergency program, the vehicle remains operational, albeit with limitations.

If the electronic transmission control fails (without current), the following forward gears can be engaged:

Failure in 1st-3rd gear -> emergency 3rd gear

Failure in 4th-6th gear -> emergency 5th gear

A restart will be performed in 3rd gear.

SPECIAL SITUATIONS (FUNCTIONS IN EGS)

- > E60, E61 from 03/2007
- > E63, E64 from 09/2007
- > E70

DIRECTION CHANGE MEMORY FUNCTION

The driver wishes to change from selector lever position "D" to selector lever position "R" or from selector lever position "R" to selector lever position "D".

- At $v \pm 5$ km/h, the driver's wish is carried out by the electronic transmission control (EGS).

- At $5 \pm v \pm 10$ km/h, selector lever position "N" is engaged by the electronic transmission control, the display of the currently engaged gear range changes to the driver's desired selector lever position "D" or selector lever position "R".

The driver's wish is stored. If the vehicle's speed drops below 5 km/h within 1 second, the driver's wish for selector lever position "D" or selector lever position "R" is carried out by the electronic transmission control. If the speed stays above this threshold, selector lever position "N" remains and the display changes to selector lever position "N".

- If $v > 10$ km/h, selector lever position "N" is engaged by the electronic transmission control

PARKING LOCK MEMORY FUNCTION

The driver wishes to engage selector lever position "P" (parking lock)

- At $v \pm 2$ km/h, selector lever position "P" is engaged by the electronic transmission control (EGS).
- At $2 \pm v \pm 5$ km/h, the current selector lever position remains, the driver's wish is stored. If the vehicle's speed drops below 2 km/h within a second, selector lever position "P" is engaged by the electronic transmission control
- At $v > 5$ km/h, the driver's wish is not accepted. The current selector lever position remains and the Check-Control message "Transmission position P only at standstill" is displayed

POSITION "N" HOLD TIME

If $v \pm 2$ km/h, the engine is OFF, selector lever position "N" is engaged and the ID transmitter is inserted, the selector lever position "N" hold time starts for 30 minutes.

During this time, information is transmitted by the electronic transmission control (EGS), the function display remains on and selector lever position "N" lights up in the gate pattern diagram. At the end of selector lever position "N" hold time, the display flashes and the electronic transmission control (EGS) engages selector lever position "P" after 10 seconds.

If the selector lever is moved during position "N" hold time, the 30 minutes selector lever position "N" hold time start afresh.

OPERATION

The different automatic transmission drive positions are selected with the selector lever.

When driving, there are the following possibilities:

- **D = Automatic mode**

When the selector lever is in position "D", gears are selected by the adaptive transmission control.

- **Gearshift using gearshift paddles**

If the selector lever is in position "D" and a gearshift is initiated using the gearshift paddles, the automatic transmission will automatically change to manual mode.

If no gearshift is made and the vehicle does not accelerate significantly within 6 seconds, the automatic transmission will change back to automatic mode.

- **SD = Automatic mode, sport program**

When the selector lever is moved to the right from position "D" into the shift gate "M/S", the automatic transmission's sport-shift program is activated. The display in the instrument cluster changes from "D" to "SD".

- **M1 to M6 = Steptronic**

If the selector lever is in shift gate "M/S" and is briefly moved to "-" or "+", the electronic circuitry changes to Steptronic. Permanent manual mode is activated with the selector lever or gearshift paddles. The display in the instrument cluster changes from "SD" to "M1" to "M6".

In manual mode (Steptronic), upshifts and downshifts are only executed by the transmission control if road speed and engine speed are suitable. Gearshifts that would result in an excessively high or low engine speed are suppressed.

- **Sport program via SPORT button**

When the SPORT button is pressed, the electronics will change to the sport program regardless of the drive range engaged or the current selector lever position.

TRANSMISSION

Automatic Transmission - Special Tools - X3

24 AUTOMATIC TRANSMISSION

24 0 010 FIXTURE

In conjunction with: 00 2 510

Note: For checking axial play of drive shaft

Transmission: 4 HP 22, 4 HP 24, A5S 310Z, A5S 560Z

24 0 150 MOUNTING BRACKET

In conjunction with: 00 1 450

Note: For mounting transmission on assembly stand

Transmission: 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, A4S 270R, A4S 310R, A5S 310Z

Order number: 24 0 150

Mounting bracket

Consisting of:

2 = 24 0 152 Baseframe

3 = 24 0 153 Spindle with rotary handle

6 = 24 0 156 Spindle

Note: With thrust piece, transmission: all

In conjunction with: 00 1 450

Fig. 11: Mounting Bracket (24 0 150)

Courtesy of BMW OF NORTH AMERICA, INC.

24 0 170 SUPPORT

In conjunction with: 00 2 030 (not included in minimum kit)

Note: For removing and installing transmission

Transmission: A5S 560Z

SI number: 1 06 92(509)

Order number: 24 0 170

Support

Consisting of:

24 0 171 Adjusting screw

Fig. 12: Support (24 0 170)

Courtesy of BMW OF NORTH AMERICA, INC.

24 0 180 SUPPORT

In conjunction with: 00 1 450

Note: For mounting transmission on assembly stand.

Transmission: A5S 310Z, A5S 325Z, A5S 360R, A5S 440Z, A5S 560Z, GA6 HP19Z, GA6 HP26Z

SI number: 1 06 92 (509)

Order number: 24 0 180

Support

Consisting of:

1 = 24 0 181 Baseframe

2 = 24 0 182 Pressure spindle with star handle

4 = 24 0 184 Spindle, long (2 x)

5 = 24 0 185 Adapter

Fig. 13: Support (24 0 180)

Courtesy of BMW OF NORTH AMERICA, INC.

24 0 190 HOLDING FIXTURE

Minimum set: Mechanical tools

Note: For output flange of propeller shaft while releasing and tightening slotted nut

Transmission: A5S 310Z, A5S 325Z, A5S 360R, A5S 560Z

SI number: 1 06 92(509)

Order number: 24 0 190

Holding fixture

Fig. 14: Holding Fixture (24 0 190)

Courtesy of BMW OF NORTH AMERICA, INC.

24 0 200 SUPPORT

In conjunction with: 00 1 450

Note: For mounting transmission on assembly stand.

Transmission: A5S 440Z, A5S 560Z, GA6 HP19Z, GA6 HP26Z, GA6 HP32Z

SI number: 1 27 06 (328)

Order number: 24 0 200

Support

Consisting of:

1 = 24 0 201 Basic body

2 = 24 0 202 Spindle with thrust member

3 = 24 0 203 Spindle with screw

4 = 24 0 204 Sliding piece

5 = 24 0 205 Adapter (long)

6 = 24 0 206 Adapter (medium)

7 = 24 0 207 Adapter (short)

Fig. 15: Support (24 0 200)

Courtesy of BMW OF NORTH AMERICA, INC.

24 0 250 TAKE-UP SUPPORT FOR TRANSMISSION

In conjunction with: 24 5 301 and 00 2 030 (not included in minimum tool kit)

Note: For removing and installing transmission.

Transmission: A5S 440Z

SI number: 1 08 96(080)

Order number: 24 0 250

Take-up support for transmission

Fig. 16: Take-Up Support For Transmission (24 0 250)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 010 INSTALLATION SLEEVE

Note: For removing disc pack (4th gear) as well as fitting needle bearing in oil pump housing (A5S 560Z)

Transmission: 4 HP 22, 4 HP 24, A5S 560Z

Storage location: A18

Order number: 24 1 010

Installation sleeve

Fig. 17: Installation Sleeve (24 1 010)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 050 IMPACT BUSH

Note: For fitting rotary shaft seal for torque converter in oil pump housing

Transmission: 3 HP 20, 3 HP 22

Storage location: C29

Order number: 24 1 050

Impact bush

Fig. 18: Impact Bush (24 1 050)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 060 IMPACT BUSH

Note: For fitting rotary shaft seal for torque converter in oil pump housing and on output flange

Transmission: 3 HP 20, 3 HP 22, A5S 300J, BW 65

Storage location: B29, C29

Order number: 24 1 060

Impact bush

Fig. 19: Impact Bush (24 1 060)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 070 IMPACT BUSH

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal in oil pump housing

Transmission: A5S 325Z

Storage location: B36

SI number: 1 03 98(303)

Order number: 24 1 070

Impact bush

Fig. 20: Impact Bush (24 1 070)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 080 BUSH (ALUMINIUM)

Minimum set: Mechanical tools

In conjunction with: 00 5 010

Note: For fitting on input shaft while removing rotary shaft seal from oil pump housing

Transmission: A5S 325Z

Storage location: A36

SI number: 1 03 98(303)

Order number: 24 1 080

Bush (aluminium)

Fig. 21: Bush (24 1 080)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 090 IMPACT BUSH

Note: For installing rotary shaft seal on output flange

Transmission: A5S 390G

SI number: 1 08 98(333)

Order number: 24 1 090

Impact bush

Fig. 22: Impact Bush (24 1 090)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 100 IMPACT BUSH

Note: For fitting rotary shaft seal for output flange in transmission extension

Transmission: 3 HP 12, 3 HP 20, 3 HP 22

Order number: 24 1 100

Impact bush

Fig. 23: Impact Bush (24 1 100)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 110 SOCKET WITH MAGNET

Minimum set: Mechanical tools

Note: For loosening and tightening converter mounting

Transmission: 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24, A4S 200R, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 325Z, A5S 360R, A5S 390G, A5S 390R, A5S 440Z, A5S 560Z, GA6 HP19Z, GA6 HP26Z, GA6 HP32Z

Storage location: B19

SI number: 1 04 86 (566)

Order number: 24 1 110

Socket with magnet

Fig. 24: Socket With Magnet (24 1 110)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 120 GAUGE

Note: For adjusting position switch in "P" position during assembly / Model year: As from 03/96

Transmission: A4S 270R

SI number: 1 07 96(068)

Order number: 24 1 120

Gauge

Fig. 25: Gauge (24 1 120)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 170 PIN WRENCH

Minimum set: Mechanical tools

Note: For releasing and tightening slotted nut on output flange

Transmission: A5S 310Z

Storage location: A35

SI number: 1 09 90(282)

Order number: 24 1 170

Pin wrench

Fig. 26: Pin Wrench (24 1 170)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 180 FIXTURE

In conjunction with: 24 1 080 (A5S 325Z)

Note: For removing and installing oil pump

Transmission: A5S 310Z, A5S 560Z

Storage location: B18

SI number: 1 09 90(282)

Order number: 24 1 180

Fixture

Consisting of:

1 = 24 1 181 Retaining tube

2 = 24 1 182 Thread spindle

3 = 24 1 183 Retaining ring, inner

Note: (not shown)

Fig. 27: Fixture (24 1 180)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 190 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seal in front section of transmission casing

Transmission: A5S 310Z

Storage location: B28

SI number: 1 09 90(282)

Order number: 24 1 190

Drift

Fig. 28: Drift (24 1 190)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 200 INSTALLATION SLEEVE

Minimum set: Mechanical tools

Note: For preventing damage to rotary shaft seal while fitting on gearshift shaft

Transmission: A5S 310Z

Storage location: B18

SI number: 1 09 90(282)

Order number: 24 1 200

Installation sleeve

Fig. 29: Installation Sleeve (24 1 200)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 210 RETAINING PLATE FOR DISC PACKAGE

Note: Not required as from transmission No. 11 2 300

Transmission: A5S 310Z

Storage location: B22

SI number: 1 09 90(282)

Order number: 24 1 210

Retaining plate for disc package

Fig. 30: Retaining Plate For Disc Package (24 1 210)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 220 TAKE-UP SUPPORT FOR DRIVE FLANGE

In conjunction with: 24 1 170 (A5S 310Z), 24 4 110 (A5S 440Z)

Note: When loosening slotted nut

Transmission: A5S 310Z, A5S 440Z

SI number: 1 09 90(282)

Order number: 24 1 220

Take-up support for drive flange

Fig. 31: Take-Up Support For Drive Flange (24 1 220)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 230 PRESSING TOOL

Note: For removing and installing piston (cover) on brake Ct

Transmission: A5S 310Z

Storage location: B20

SI number: 1 14 93(718)

Order number: 24 1 230

Pressing tool

Fig. 32: Pressing Tool (24 1 230)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 240 MEASURING DEVICE

Note: For determining spacers on brake C

Transmission: A5S 310Z

Storage location: B20

SI number: 1 14 93(718)

Order number: 24 1 240

Measuring device

Fig. 33: Measuring Device (24 1 240)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 250 LIFTING GEAR

Note: For removing and installing brake clutch unit D/G incl. sprag wheel

Transmission: A5S 310Z

Storage location: B11, C11

SI number: 1 14 93(718)

Order number: 24 1 250

Lifting gear

Fig. 34: Lifting Gear (24 1 250)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 260 REMOVAL AND MOUNTING FIXTURE

Note: For removing and installing cylinder D/E with planetary gear train

Transmission: A5S 560Z

Storage location: C1, C2

SI number: 1 01 95(892)

Order number: 24 1 260

Removal and mounting fixture

Consisting of:

1 = 24 1 261 Handle

2 = 24 1 262 Spindle with knurled nut

3 = 24 1 263 Centering bush

Fig. 35: Removal And Mounting Fixture (24 1 260)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 270 REMOVAL AND MOUNTING FIXTURE

Note: For removing and installing clutch A/B/C

Transmission: A5S 560Z

Storage location: B14, B15, B3

SI number: 1 01 95(892)

Order number: 24 1 270

Removal and mounting fixture

Consisting of:

1 = 24 1 271 Lifting tube with eye bolt

2 = 24 1 272 Lock pin

Fig. 36: Removal And Mounting Fixture (24 1 270)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 280 REMOVAL AND MOUNTING FIXTURE

Note: For removing and installing brake clutch F

Transmission: A5S 560Z

Storage location: C20

SI number: 1 01 95(892)

Order number: 24 1 280

Removal and mounting fixture

Consisting of:

1 = 24 1 281 Handle with spindle

2 = 24 1 282 Knurled nut

3 = 24 1 283 Centering handle

Fig. 37: Removal And Mounting Fixture (24 1 280)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 290 WEDGES

Note: For fixing disc pack C in position while securing retainer tabs

Transmission: A5S 560Z

Storage location: C17

SI number: 1 01 95(892)

Order number: 24 1 290

Wedges

Fig. 38: Wedges (24 1 290)
Courtesy of BMW OF NORTH AMERICA, INC.

24 1 300 IMPACT TOOL

Note: For securing retainer tabs on disc pack C

Transmission: A5S 560Z

Storage location: C17

SI number: 1 01 95(892)

Order number: 24 1 300

Impact tool

Fig. 39: Impact Tool (24 1 300)

Courtesy of BMW OF NORTH AMERICA, INC.

24 1 310 RELEASING TOOL

Note: For releasing retainer tabs on disc pack C

Transmission: A5S 560Z

Storage location: C2

SI number: 1 01 95(892)

Order number: 24 1 310

Releasing tool

Consisting of:

1 = 24 1 311 Profile section (slide)

2 = 24 1 312 Basic body

Fig. 40: Releasing Tool (24 1 310)

Courtesy of BMW OF NORTH AMERICA, INC.

24 2 020 TOOL

Note: For compressing disc spring

Transmission: 4 HP 22, 4 HP 24

Storage location: C32

Order number: 24 2 020

Tool

Fig. 41: Tool (24 2 020)

Courtesy of BMW OF NORTH AMERICA, INC.

24 2 030 TOOL

Note: For compressing disc spring

Transmission: 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24

Storage location: C32

Order number: 24 2 030

Tool

Fig. 42: Tool (24 2 020)

Courtesy of BMW OF NORTH AMERICA, INC.

24 2 040 TOOL

Note: For compressing disc spring

Transmission: 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24

Storage location: C32

Order number: 24 2 040

Tool

Fig. 43: Tool (24 2 020)

Courtesy of BMW OF NORTH AMERICA, INC.

24 2 050 EXTRACTOR GRIP

Note: For sealing plugs in transmission case lower section / Replaced by 24 0 050

Order number: 24 2 050

Extractor grip

24 2 140 TENSIONING TOOL

Note: For removing and installing snap ring in front of centering plate of ZF transmissions

Transmission: 3 HP 12, 3 HP 20, 3 HP 22

Order number: 24 2 140

Tensioning tool

Fig. 44: Tensioning Tool (24 2 140)

Courtesy of BMW OF NORTH AMERICA, INC.

24 2 310 TOOL KIT FOR REMOVING AND INSTALLING REVERSE GEAR PISTON

Note: For disassembling and assembling transmission for "Sealing intermediate plate" job

Transmission: A4S 270R, A4S 310R

SI number: 1 22 97(239)

Order number: 24 2 310

Tool kit for removing and installing reverse gear piston

Consisting of:

1 = 24 2 311 Pressure plate

Note: For removing and installing spring retainer

2 = 24 2 312 Spindle with pressure plate

Note: Spindle M14x1.5, nut M14, pressure plate and washer / For removing and installing spring retainer

3 = 24 2 313 Guide pin (2)

Note: For fixing gaskets and intermediate plates on intermediate housing

4 = 24 2 314 Slip bush

Note: For removing piston in cylinder of intermediate plate

Fig. 45: Tool Kit For Removing And Installing Reverse Gear Piston (24 2 310)
Courtesy of BMW OF NORTH AMERICA, INC.

24 2 320 BOX SPANNER

In conjunction with: 24 2 330

Note: For 3/16" socket head cap screw with 1/4" socket for adjusting brake band

Transmission: A4S 270R, A4S 310R

SI number: 1 24 97(257)

Order number: 24 2 320

Box spanner

Fig. 46: Box Spanner (24 2 320)
Courtesy of BMW OF NORTH AMERICA, INC.

24 2 330 1/2" OPEN-ENDED SPANNER

In conjunction with: 24 2 320

Note: For adjusting brake band

Transmission: A4S 270R, A4S 310R

SI number: 1 24 97(257)

Order number: 24 2 330

1/2" open-ended spanner

Fig. 47: 1/2" Open-Ended Spanner (24 2 330)
Courtesy of BMW OF NORTH AMERICA, INC.

24 3 040 GAUGE

Note: For adjusting restrictor piston when installing gearshift unit

Transmission: 3 HP 12, 3 HP 20, 3 HP 22

Order number: 24 3 040

Gauge

Fig. 48: Gauge (24 3 040)

Courtesy of BMW OF NORTH AMERICA, INC.

24 3 050 GAUGE

Note: For aligning hydraulic gearshift unit in transmission

Transmission: 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24

Order number: 24 3 050

Gauge

Fig. 49: Gauge (24 3 050)

Courtesy of BMW OF NORTH AMERICA, INC.

24 3 140 DRIVE BUSH

Note: For checking smooth movement of oil pump

Transmission: 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24, A5S 560Z

Storage location: A20

Order number: 24 3 140

Drive bush

Fig. 50: Drive Bush (24 3 140)

Courtesy of BMW OF NORTH AMERICA, INC.

24 3 150 DRIVE BUSH

Note: For checking smooth movement of oil pump

Transmission: 3 HP 20, 3 HP 22

Storage location: A20

Order number: 24 3 150

Drive bush

Fig. 51: Drive Bush (24 3 150)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 000 ASSEMBLY GRIP (2)

Minimum set: Mechanical tools

Note: For removing and installing torque converter

Transmission: A4S 200R, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 325Z, A5S 360R, A5S 390G, A5S 390R, A5S 440Z, A5S 560Z, GA6 HP19Z, GA6 HP26Z, GA6 HP32Z

Storage location: C18

Order number: 24 4 000

Assembly grip (2)

Fig. 52: Assembly Grip (24 4 000)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 070 FIXTURE

Note: For checking torque converter for leaks

Transmission: 3 HP 20, 3 HP 22, 4 HP 22

Order number: 24 4 070

Fixture

Fig. 53: Fixture (24 4 070)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 080 FIXTURE

Note: For firmly holding torque converter in position while removing and installing transmission

Transmission: 4 HP 22, 4 HP 24

Storage location: Single

Order number: 24 4 080

Fixture

Fig. 54: Fixture (24 4 080)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 090 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For fitting rotary shaft seal on output end

Transmission: A5S 440Z, A5S 560Z

Storage location: B28

SI number: 1 06 92(509)

Order number: 24 4 090

Drift

Fig. 55: Drift (24 4 090)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 100 DRIFT

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal on drive side (behind converter)

Transmission: A5S 440Z, A5S 560Z

Storage location: C29

SI number: 1 06 92(509)

Order number: 24 4 100

Drift

Fig. 56: Drift (24 4 100)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 110 SPANNER

Minimum set: Mechanical tools

Note: For releasing and tightening slotted nut on output flange

Transmission: A5S 440Z, A5S 560Z

Storage location: A23

SI number: 1 06 92(509)

Order number: 24 4 110

Spanner

Fig. 57: Spanner (24 4 110)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 120 FIXTURE

Note: For firmly holding torque converter in position while removing and installing transmission.

Replaced by 24 4 130.

Order number: 24 4 120

Fixture

Fig. 58: Fixture (24 4 120)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 130 LOCATING TOOL

Minimum set: Mechanical tools

Note: For firmly holding torque converter in position while removing and installing transmission

Transmission: A4S 310R, A5S 300J, A5S 310Z, A5S 325Z, A5S 360R, A5S 390G, A5S 440Z, A5S 560Z, GA6 HP26Z

Storage location: A33

SI number: 1 05 97 (181)

Order number: 24 4 130

Locating tool

Consisting of:

1 = 24 4 131 Base unit

2 = 24 4 132 Blade

Note: Transmission: A5S 440Z, GA6HP26Z (N62)

3 = 24 4 133 Blade

Note: Transmission: A4S 310R and A5S 390G

4 = 24 4 134 Blade

Note: Transmission: A5S 310Z, A5S 560Z, A5S 300J and A5S 325Z

5 = 24 4 135 Blade

Note: Transmission: A5S 560Z, GA6 HP26Z (M67), GA6 HP32Z (N73)

6 = 24 4 136 Counter plate

7 = 24 4 137 Blade

Note: Transmission: A5S 360R

Fig. 59: Locating Tool (24 4 130)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 160 SUPPORT BRACKET

Minimum set: Mechanical tools

Note: For securing converter during removal and installation of transmission

Series: E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E87, E90, E92, RR1

Transmission: GA6 HP19Z, GA6 HP26Z, GA6 HP32Z

Storage location: A47, C46

SI number: 1 11 02 (908)

Order number: 24 4 160

Support bracket

Consisting of:

1 = 24 4 161 Basic body

2 = 24 4 162 Shaped section

Note: For converter variant N73

3 = 24 4 163 Shaped section

Note: For converter variant M57TU

4 = 24 4 164 Shaped section

Note: For converter variant M54

5 = 24 4 165 Shaped section

Note: Transmission: GA6 HP19 in E87, E90

Fig. 60: Support Bracket (24 4 160)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 200 DRIFT AND SLIP BUSH

Minimum set: Mechanical tools

Note: For driving in shaft seal on drive shaft.

Transmission: GACVT16Z

Order number: 24 4 200

Drift and slip bush

Consisting of:

1 = 24 4 201 Drift

2 = 24 4 202 Slip bush

Fig. 61: Drift And Slip Bush (24 4 200)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 210 SOCKET WAF 46

Note: For releasing and tightening down output shaft screw/bolt (bearing side).

Transmission: GACVT16Z

SI number: 1 09 05 (188)

Order number: 24 4 210

Socket WAF 46

Fig. 62: Socket WAF 46 (24 4 210)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 220 EXTRACTOR

Note: For removing primary bearing on drive shaft.

Transmission: GACVT16Z

SI number: 1 09 05 (188)

Order number: 24 4 220

Extractor

Consisting of:

1 = 24 4 221 Basic body

2 = 24 4 222 Claws (2 x)

3 = 24 4 223 Thrust piece

4 = 24 4 224 Ring

Fig. 63: Extractor (24 4 220)

Courtesy of BMW OF NORTH AMERICA, INC.

24 4 230 DRIFT

Note: For driving in primary bearing on drive shaft.

Transmission: GACVT16Z

SI number: 1 09 05 (188)

Order number: 24 4 230

Drift

Fig. 64: Drift (24 4 230)

24 5 120 TOOL

Note: For centering converter bell housing with respect to oil pump during assembly

Transmission: A4S 270R, A4S 310R

Storage location: B2

SI number: 1 04 95(906)

Order number: 24 5 120

Tool

Consisting of:

1 = 24 5 121 Centering bush

2 = 24 5 122 Centering pin (3)

Fig. 65: Tool (24 5 120)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 140 CENTERING PIN

Note: For transfer plate and gasket to shift unit (2 x)

Transmission: A4S 310R

Order number: 24 5 140

Centering pin

24 5 150 CENTERING PIN WITH THREAD (2)

Note: For centering gearshift unit in transmission during assembly

Transmission: A4S 270R, A4S 310R

Storage location: A2

SI number: 1 03 90(184)

Order number: 24 5 150

Centering pin with thread (2)

Fig. 66: Centering Pin With Thread (24 5 150)
Courtesy of BMW OF NORTH AMERICA, INC.

24 5 160 CENTERING PINS

Note: For centering main housing with respect to intermediate and converter housing (2)

Transmission: A4S 270R, A4S 310R

Storage location: A2, B2

SI number: 1 03 93(663)

Order number: 24 5 160

Centering pins

Fig. 67: Centering Pins (24 5 160)
Courtesy of BMW OF NORTH AMERICA, INC.

24 5 190 ADAPTER

In conjunction with: 13 3 061, 13 3 067, 24 0 021, 24 0 023, 24 0 140

Note: For pressure gauge 13 3 061 for checking oil pressure in transmission

Transmission: A4S 270R, A4S 310R

Storage location: C20

SI number: 1 03 90(184)

Order number: 24 5 190

Adapter

Fig. 68: Adapter (24 5 190)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 200 IMPACT BUSH

Note: For driving in radial seal of selector lever shaft / Replaced by 24 5 360

Transmission: A4S 270R, A4S 310R

SI number: 1 03 90 (184)

Order number: 24 5 200

Impact bush

Fig. 69: Impact Bush (24 5 200)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 210 HOLDER

Note: For loosening and tightening gearshift cable

Transmission: 4 HP 22, 4 HP 24, A4S 270R, A4S 310R, A5S 310Z

Storage location: B19

SI number: 1 04 91(372)

Order number: 24 5 210

Holder

Fig. 70: Holder (24 5 210)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 220 HOLDER

Note: For loosening and tightening gearshift cable

Transmission: A5S 300J, A5S 310Z

Storage location: B19

SI number: 1 04 91(372)

Order number: 24 5 220

Holder

Fig. 71: Holder (24 5 220)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 230 ASSEMBLY RING

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal on gearshift shaft

Transmission: 4 HP 22, 4 HP 24, A5S 310Z

Storage location: B19

SI number: 1 04 91(372)

Order number: 24 5 230

Assembly ring

Fig. 72: Assembly Ring (24 5 230)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 240 HOLDER

Note: For releasing and tightening gearshift cable / transmission with position switch

Transmission: A5S 310Z, A5S 560Z

Storage location: B19

SI number: 1 06 92(509)

Order number: 24 5 240

Holder

Fig. 73: Holder (24 5 240)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 250 BUSH

Minimum set: Mechanical tools

In conjunction with: 24 5 490

Note: For fitting rotary shaft seal on selector shaft

Transmission: A5S 310Z, A5S 560Z

Storage location: B19

SI number: 1 02 95(896)

Order number: 24 5 250

Bush

Fig. 74: Bush (24 5 250)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 260 EXTRACTOR TOOL

Minimum set: Mechanical tools

Note: For removing rotary shaft seal of selector shaft / transmission with position switch

Transmission: A5S 310Z, A5S 440Z, A5S 560Z

Storage location: B19

SI number: 1 02 95 (896)

Order number: 24 5 260

Extractor tool

Consisting of:

1 = 24 5 261 Insert

2 = 24 5 262 Bushing

Fig. 75: Extractor Tool (24 5 260)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 270 BUSH

Minimum set: Mechanical tools

In conjunction with: 24 5 490

Note: For fitting rotary shaft seal on selector shaft

Transmission: A5S 440Z

Storage location: B18

SI number: 1 08 96(080)

Order number: 24 5 270

Bush

Fig. 76: Bush (24 5 270)

Courtesy of BMW OF NORTH AMERICA, INC.

24 5 350 TAKE-UP SUPPORT FOR AUTOMATIC TRANSMISSION

Note: Miscellaneous: Japan and South Africa only

Transmission: A5S 300J

Order number: 24 5 350

Take-up support for automatic transmission

Fig. 77: Take-Up Support For Automatic Transmission (24 5 350)
Courtesy of BMW OF NORTH AMERICA, INC.

24 5 400 DRIFT

In conjunction with: 00 5 500

Note: For drive shaft seal.

Transmission: GACVT16Z

Order number: 24 5 400

Drift

Fig. 78: Drift (24 5 400)
Courtesy of BMW OF NORTH AMERICA, INC.

24 5 490 SLIP SLEEVE (5)

Minimum set: Mechanical tools

Note: For preventing damage to rotary shaft seal while fitting on gearshift shaft

Transmission: A5S 310Z, A5S 440Z, A5S 560Z

SI number: 1 02 95 (896)

Order number: 24 5 490

Slip sleeve (5)

Fig. 79: Slip Sleeve (5) (24 5 490)

Courtesy of BMW OF NORTH AMERICA, INC.

24 6 000 TEST CABLE, 8-PIN

In conjunction with: Test box 88 -pin 614410

Note: For automatic transmission (EH transmission)

Transmission: 4 HP 22, 4 HP 24

Storage location: A 101

SI number: 2 03 91 (313)

Order number: 24 6 000

Test cable, 8-pin

Fig. 80: Test Cable, 8-Pin (24 6 000)
Courtesy of BMW OF NORTH AMERICA, INC.

24 6 010 TEST CABLE, 9-PIN

In conjunction with: Test box 88 -pin 614410

Note: For automatic transmission (EH transmission)

Transmission: A4S 270R, A4S 310R

Storage location: A 102

SI number: 2 03 91 (313)

Order number: 24 6 010

Test cable, 9-pin

Fig. 81: Test Cable, 9-Pin (24 6 010)
Courtesy of BMW OF NORTH AMERICA, INC.

24 6 020 TEST CABLE, 14-PIN

In conjunction with: Test box 88 -pin 614410

Note: For automatic transmission (EH transmission)

Transmission: A5S 310Z

Storage location: A 103

SI number: 0 02 99 (399)

Order number: 24 6 020

Test cable, 14-pin

Consisting of:

24 6 029 Operating instructions

Fig. 82: Test Cable, 14-Pin (24 6 020)

Courtesy of BMW OF NORTH AMERICA, INC.

24 6 060 TEST CABLE, 16-PIN

Note: For automatic transmission (EH transmission)

Transmission: A5S 310Z, A5S 560Z

Storage location: A 106

SI number: 2 02 93 (650)

Order number: 24 6 060

Test cable, 16-pin

Fig. 83: Test Cable, 16-Pin (24 6 060)

Courtesy of BMW OF NORTH AMERICA, INC.

24 6 070 TEST CABLE, 20-PIN

Minimum set: Measuring and testing equipment

In conjunction with: 61 1 459

Note: For automatic transmission GM5

Transmission: A5S 360R

Storage location: A 107

SI number: 2 01 99 (468)

Order number: 24 6 070

Test cable, 20-pin

24 6 080 TEST LEAD, 16-PIN

Minimum set: Measuring and testing equipment

In conjunction with: 61 1 459

Transmission: GA6 HP26Z

Storage location: L204

SI number: 2 06 01 (763)

Order number: 24 6 080

Test lead, 16-pin

Fig. 84: Test Lead, 16-Pin (24 6 080)

Courtesy of BMW OF NORTH AMERICA, INC.

24 8 100 ADAPTER

Minimum set: Mechanical tools

Note: For filling automatic transmission

Transmission: GACVT16Z

SI number: 1 05 01 (718)

Order number: 24 8 100

Adapter

Fig. 85: Adapter (24 8 100)

Courtesy of BMW OF NORTH AMERICA, INC.

24 8 110 DRIFT

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving shaft seal onto drive flange

Transmission: GACVT16Z

SI number: 1 02 02 (823)

Order number: 24 8 110

Drift

Fig. 86: Drift (24 8 110)

Courtesy of BMW OF NORTH AMERICA, INC.

24 8 120 RUBBER PROFILE

Minimum set: Mechanical tools

Note: For protecting shaft seal in transmission when installing output shafts.

Transmission: GACVT16Z, GS5-65BH, GS6-85BG, GS6-85DG

SI number: 1 02 02 (823)

Order number: 24 8 120

Rubber profile

Fig. 87: Rubber Profile (24 8 120)

Courtesy of BMW OF NORTH AMERICA, INC.

24 8 130 DRIFT

In conjunction with: 00 5 550

Note: For driving in shaft seal on input shaft. Transmission: CVT automatic transmission Replaced by 24 4 200

Transmission: GACVT16Z

SI number: 1 02 02 (823)

Order number: 24 8 130

Drift

71 TRANSMISSION MOUNTING

24 71 TRANSMISSION MOUNTS

TRANSMISSION MOUNTS - TIGHTENING TORQUES

	Type	Thread	Tightening specification	Measure
1AZ Cross member to body	E36 / E38 / E39 / E46 / E53			21 Nm
	E60 / E85 / E61 / E63 / E64 / E66 / E67 / E68 / E65 / E83 / E81 / E87 / E92 / E91 / E90 / E86	M8		19 Nm
2AZ Rubber mounts to cross member or transmission	E36 / E38 / E39 / E46 / E53			21 Nm
	E81 / E60 / E61 / E63 / E64 / E65 / E66 / E87 / E92 / E91 / E90 / E87 / E86 / E85 / E83 / E68 / E67			19 Nm
3AZ Support tube to engine subframe	E36			42 Nm
4AZ Rubber mounts to carrier pipe	E36			21 Nm
5AZ Carrier plate	E36			21 Nm
6AZ Transmission support block to transmission	E60 / E61 / E63 / E64 / E87 / E85 / E86 / E87 / E90 / E91 / E92 / E81		ASA screw	38 Nm
	E60 / E61 / E63 / E64 / E87 / E85 / E86 / E87 / E90 / E91 / E92 / E81	M10	M10 ISA pan-head screw	48 Nm
7AZ Transmission mount to transmission support bracket/transmission cross-member	E60 / E61 / E63 / E64 / E87 / E90 / E91 / E92 / E81			19 Nm

TRANSMISSION

Clutch - Operating Fluids

1.0 GENERAL INFORMATION

Brake fluid is used as an operating fluid for hydraulic clutch operation.

2.0 SMG: SEQUENTIAL MANUAL GEAR BOX

All models SMG Hydraulic Unit require the use of Pentosin CHF 11S fluid.

3.0 OTHER OPERATING FLUIDS

CLUTCH COMPONENT GREASE

Use UNIREX S2 (replaces Klueber Microlube GL 261) for the lubrication of splines on the transmission input shaft, lubricating groove of the clutch release bearing, piston rod sleeve, clutch master cylinder and front push rod of the clutch slave cylinder.

UNIREX S2 Grease BMW Part No. 83 23 9 416 138

As of 11/93 the clutch release bearings are available as a replacement part which have plastic sliding sleeves instead of aluminum. Such updated bearings should not be lubricated at all. This applies to all models with manual transmission except for 8 Series models.

TRANSMISSION

Clutch - Repair Instructions - X3

00 MAINTENANCE AND INSPECTION

21 00 006 BLEEDING CLUTCH HYDRAULIC SYSTEM

Special tools required:

- 21 5 030

Necessary preliminary tasks:

- Remove transmission underbody protection if necessary.
- Remove microfilter housing is necessary.

IMPORTANT: From 08.06 a plastic clutch slave cylinder is installed in the E8X, E9X.

Important notes on installation are described in this work step.

Unfasten nuts and remove clutch slave cylinder (pressure line remains connected).

Fig. 1: Clutch Slave Cylinder Nuts
Courtesy of BMW OF NORTH AMERICA, INC.

Fit special tool 21 5 030 on clutch slave cylinder (1).

Press piston rod (2) with aid of spindle completely into clutch slave cylinder.

Fig. 2: Special Tool 21 5 030, Clutch Slave Cylinder And Piston Rod
Courtesy of BMW OF NORTH AMERICA, INC.

Connect bleeder unit to brake fluid expansion tank.

IMPORTANT: Check relevant Operating Instructions for each device.

Charging pressure should not exceed 2 bar.

Connect bleeder hose to bleed valve (1).

Hold clutch slave cylinder in illustrated position (refer to figure) with special tool 21 5 030 .

Open bleeder valve (1).

If bubble-free brake fluid emerges, retract piston rod (2) of clutch slave cylinder with aid of spindle a little and press in again.

If no air bubbles escape, close bleeder valve (1), otherwise repeat procedure.

IMPORTANT: Do not under any circumstances remove special tool 21 5 030 from clutch slave cylinder when brake system is pressurized.

Piston with push rod can jump out of clutch slave cylinder.

Fig. 3: Retracting Piston Rod Of Clutch Slave Cylinder
 Courtesy of BMW OF NORTH AMERICA, INC.

Switch off bleeder unit or remove from brake fluid expansion tank.

Slowly retract piston rod (2) of clutch slave cylinder (1) with special tool 21 5 030 .

Remove special tool 21 5 030 from clutch slave cylinder (1).

Fig. 4: Special Tool 21 5 030, Clutch Slave Cylinder And Piston Rod
 Courtesy of BMW OF NORTH AMERICA, INC.

Fit clutch slave cylinder to transmission.

Installation:

Replace self-locking nuts.

Tightening torque: 5AZ, see **21 52 CLUTCH OPERATION (HYDRAULIC)** .

Fig. 5: Clutch Slave Cylinder Nuts

Courtesy of BMW OF NORTH AMERICA, INC.

Correct brake fluid level in expansion tank.

21 CLUTCH WITH DRIVING DISC

11 22 513 REPLACING ROLLER BEARING FOR DUAL-MASS FLYWHEEL

Special tools required:

- 21 2 051
- 21 2 052

NOTE: Flywheel removed!

Using hydraulic press (1) and special tool 21 2 051 , press out dual-mass flywheel downwards on engine side.

**IMPORTANT: Risk of damage:
Roller bearing must not be driven out.**

Fig. 6: Hydraulic Press And Special Tool 21 2 051
Courtesy of BMW OF NORTH AMERICA, INC.

Push roller bearing (2) onto special tool 21 2 052 .

Using hydraulic press (1), press roller bearing into dual-mass flywheel as far as it will go on clutch side.

IMPORTANT: Risk of damage:

Observe press-in instruction:

- Roller bearing must not be driven in.
- Roller bearing mounting force/travel monitored:

Min. 2000N 1 mm before end of pressing in.

Max. 15000N during entire press-in procedure.

Fig. 7: Roller Bearing, Hydraulic Press And Special Tool 21 2 052

Courtesy of BMW OF NORTH AMERICA, INC.

11 22 513 REPLACING ROLLER BEARING FOR DUAL-MASS FLYWHEEL

Special tools required:

- 00 5 500
- 11 2 010
- 11 2 343
- 11 2 350

NOTE: Flywheel removed!

Position special tool 11 2 010 in roller bearing.

Twist out roller bearing with special tool 11 2 343 .

Fig. 8: Twisting Out Roller Bearing With Special Tool 11 2 343

Courtesy of BMW OF NORTH AMERICA, INC.

Assemble special tools 11 2 350 and 00 5 500 .

Drive in roller bearing with special tools 11 2 350 and 00 5 500 in direction of arrow as far as it will go.

Fig. 9: Roller Bearing

Courtesy of BMW OF NORTH AMERICA, INC.

Assemble engine.

11 22 513 REPLACING ROLLER BEARING FOR DUAL-MASS FLYWHEEL (N47)

Special tools required:

- 21 2 051
- 21 2 052

NOTE: Flywheel removed!

Using hydraulic press (1) and special tool 21 2 051 , press out dual-mass flywheel downwards on engine side.

**IMPORTANT: Risk of damage:
Roller bearing must not be driven out.**

Fig. 10: Hydraulic Press And Special Tool 21 2 051
Courtesy of BMW OF NORTH AMERICA, INC.

Push roller bearing (2) onto special tool 21 2 052 .

Using hydraulic press (1), press roller bearing into dual-mass flywheel as far as it will go on clutch side.

IMPORTANT: Risk of damage:
Observe press-in instruction:

- Roller bearing must not be driven in.
- Roller bearing mounting force/travel monitored:

Min. 2000N 1 mm before end of pressing in.

Max. 15000N during entire press-in procedure.

Fig. 11: Roller Bearing, Hydraulic Press And Special Tool 21 2 052
Courtesy of BMW OF NORTH AMERICA, INC.

21 21 500 REMOVING AND INSTALLING/REPLACING CLUTCH (SAC)

Special tools required:

- 11 9 260
- 11 9 263
- 11 9 264
- 11 9 265
- 21 2 141
- 21 2 170
- 21 2 180

- 21 2 201
- 21 2 230
- 21 2 250

Necessary preliminary tasks:

Remove transmission, see **23 00 019 REMOVING AND INSTALLING TRANSMISSION (GS6-37BZ N52K)** .

Installation:

N52/N53

Screws must be replaced.

Jointing torque and angle of rotation must be observed without fail.

M54/M57/N52/N53/S54 only:

Block flywheel with special tools 11 9 260 and 11 9 265 .

Fig. 12: Special Tools 11 9 260 And 11 9 265
Courtesy of BMW OF NORTH AMERICA, INC.

N62 only:

Block flywheel with special tools 11 9 260 , 11 9 263 and 11 9 264 .

Fig. 13: Special Tools 11 9 260, 11 9 263 And 11 9 264
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws and remove clutch from flywheel.

Installation:

Clean flywheel and check for wear and damage.

Replace damaged flywheel.

IMPORTANT: Always replace clutch plates fouled e.g. by oil, cleaning agent.

Fig. 14: Locating Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Observe the following procedure when installing the removed clutch and clutch plate.

Installation:

Screws must be replaced.

Joining torque and angle of rotation must be observed without fail.

Insert special tool 21 2 180 in clutch.

Press special tool 21 2 180 together at handles (1) as far as it will go and tighten down knurled screws (2).

Adjustment ring of clutch is now secured in its original position (wear position).

Fig. 15: Special Tool 21 2 180 And Handles
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Locking hooks (1) of special tool 21 2 180 must engage in openings of pressure spring.

Fig. 16: Locking Hooks Of Special Tool 21 2 180
Courtesy of BMW OF NORTH AMERICA, INC.

Fit special tool 21 2 170 and tighten down at knurled screw (1).

Screw in spindle (2) until diaphragm spring (3) is tensioned on stop.

Fig. 17: Special Tool 21 2 170, Spindle And Diaphragm Spring
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Insert special tool 21 2 170 only in area of bores for dowel pins.

Centre clutch plate (1) with special tool in dual-mass flywheel.

IMPORTANT: Install clutch plate in correct position.

Note designation for "engine side" / "transmission side".

Handle clutch plate with care. Do not touch surfaces of friction linings.

Special tool Transmission

21 2 201 GS6-37BZ

21 2 230 GS6-53DZ/BZ

21 2 141 S5D 390Z

21 2 250 GS6-17BG

Fig. 18: Clutch Plate And Special Tool
 Courtesy of BMW OF NORTH AMERICA, INC.

Fit clutch (1) to flywheel.

Tightening torque: 1AZ, see 21 21 CLUTCH DISC AND DRIVE PLATE .

NOTE: Clutch (1) must be secured by way of dowel pins (2).

Fig. 19: Clutch And Dowel Pins
 Courtesy of BMW OF NORTH AMERICA, INC.

Release spindle (1) until load is fully removed from diaphragm spring. Remove special tools 21 2 170 and 21 2 180 .

Fig. 20: Releasing Spindle

Courtesy of BMW OF NORTH AMERICA, INC.

Withdraw special tool from clutch plate with aid of accompanying screw (1).

Fig. 21: Special Tool

Courtesy of BMW OF NORTH AMERICA, INC.

Installing removed clutch with new clutch plate:

Installation:

N52

Screws must be replaced.

Jointing torque and angle of rotation must be observed without fail.

IMPORTANT: Before installing a used clutch with a new clutch plate, always reset adjustment ring in new position.

Set clutch down on a clean surface.

Insert special tool 21 2 180 in clutch (1).

Fig. 22: Special Tool 21 2 180 And Clutch
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Locking hooks (1) of special tool 21 2 180 must engage in openings in clutch.

Fig. 23: Locking Hooks Of Special Tool 21 2 180
Courtesy of BMW OF NORTH AMERICA, INC.

Fit special tool 21 2 170 and tighten down at knurled screw (1).

NOTE: Insert special tool 21 2 170 only in area of bores for dowel pins.

Fig. 24: Special Tool 21 2 170, Spindle And Diaphragm Spring
 Courtesy of BMW OF NORTH AMERICA, INC.

Screw in spindle (1) until adjustment ring of clutch (2) can be turned with special tool 21 2 180 at handles (3).

Press special tool 21 2 180 together at handles (3) as far as it will go and grip firmly.

At same time tighten down knurled screws (2).

Adjustment ring of clutch is now secured in new position.

Screw in spindle (1) until diaphragm spring is tensioned on stop.

Fig. 25: Screwing In Spindle
 Courtesy of BMW OF NORTH AMERICA, INC.

Centre clutch plate (1) with special tool.

IMPORTANT: Install clutch plate in correct position.
Note designation for "engine side" / "transmission side".

Handle clutch plate with care. Do not touch surfaces of friction linings.

51 CLUTCH RELEASE CONTROL WITH LEVER

21 51 500 REMOVING AND INSTALLING OR REPLACING CLUTCH RELEASE BEARING/LEVER

NOTE: (transmission removed)

Detach release bearing (1).

Installation:

Clean all sliding surfaces on clutch release bearing, check for damage and replace if necessary.

Do **not** grease clutch release bearing.

Sliding surfaces (2) of clutch release bearing must rest on sliding surfaces (3) of release lever.

Apply a thin coating of grease to sliding surfaces (2) of release bearing.

Fig. 34: Detaching Release Bearing

Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: New clutch release bearing fitted!

See following graphic.

IMPORTANT: On E60/E61/E63/E64/M5 and M6 - apply a light coating of grease to bearing guide.

New clutch release bearing:

Clutch release bearing with moving thrust plate (1).

Swivel motion of thrust plate (1) possible.

Fig. 35: Swivel Motion Of Thrust Plate
Courtesy of BMW OF NORTH AMERICA, INC.

Previous clutch release bearing:

Clutch release bearing with rigidly positioned thrust plate (1).

Swivel motion of thrust plate (1) not possible.

Fig. 36: Thrust Plate
Courtesy of BMW OF NORTH AMERICA, INC.

Withdraw release lever (4) from spring wire clip (5) and remove.

Installation:

Clean release lever.

Fig. 37: Release Lever From Spring Wire Clip
 Courtesy of BMW OF NORTH AMERICA, INC.

Apply a thin coating of grease to release lever at sliding surfaces (1 and 2) only.

Fig. 38: Sliding Surfaces Of Release Lever
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Check spring wire clip (5) and ball pin (6) for damage and replace if necessary.

Apply a thin coating of grease to ball pin (6).

NOTE: **The spring wire clip and ball pin must always be replaced on the S6S 420G transmission.**

Fig. 39: Spring Wire Clip And Ball Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Note on installation: (except for E60/E61/E63/E64/M5 and M6)

Do **not** grease guide sleeve.

If guide sleeve is greased, the release lever can stick on the guide sleeve.

Clean guide sleeve (7).

Fig. 40: Guide Sleeve
Courtesy of BMW OF NORTH AMERICA, INC.

52 CLUTCH OPERATION (HYDRAULIC)

21 52 500 REMOVING AND INSTALLING/REPLACING CLUTCH MASTER CYLINDER

NOTE: After completing work, bleed clutch hydraulic system .

Necessary preliminary tasks:

- Remove trim panel for pedal assembly, see **21 00 006 Bleeding clutch hydraulic system.**

Draw off brake fluid up to supply hose of clutch hydraulic system (1). For this purpose, use only a vacuum pipe that is exclusively used for removing brake fluid.

Detach supply hose (1) from expansion tank.

Fig. 41: Supply Hose Of Clutch Hydraulic System
Courtesy of BMW OF NORTH AMERICA, INC.

Press pin (1) out of clutch pedal with a short screwdriver.

Fig. 42: Pressing Pin Out Of Clutch Pedal
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

The pin is coded by a straight surface (1).

The coding points upwards.

Screw pin with coding upwards. Turn slightly until coding snaps into place. Press in pin until engaged (2).

Fig. 43: Straight Surface Of Pin

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws.

Tightening torque: 2AZ, see **21 52 CLUTCH OPERATION (HYDRAULIC)** .

Fig. 44: Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Detach retainer (1) with a screwdriver (2).

NOTE: Do not foul carpet with brake fluid.

Detach hydraulic line from clutch master cylinder.

Fig. 45: Retainer

Courtesy of BMW OF NORTH AMERICA, INC.

Detach supply hose (1) from clutch master cylinder and remove clutch master cylinder.

IMPORTANT: Do not pull supply hose completely into interior.

Fig. 46: Supply Hose

Courtesy of BMW OF NORTH AMERICA, INC.

Lever out shift element (1) from clutch master cylinder (2) with screwdriver.

Release plug connection (3) and disconnect plug (4) from shift element (1).

Fig. 47: Plug Connection

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Shift element is secured against incorrect installation.

Shift element must snap audibly into place.

Fig. 48: Shift Element

Courtesy of BMW OF NORTH AMERICA, INC.

21 52 510 REMOVING AND INSTALLING OR REPLACING CLUTCH SLAVE CYLINDER

Special tools required:

- 13 3 010

NOTE: After completing work bleed clutch hydraulic system, see 21 00 006 Bleeding clutch hydraulic system.

IMPORTANT: From 08.06 a plastic clutch slave cylinder is installed in the E8X, E9X.
Important notes on installation are described in this work step.

Seal supply hose to clutch master cylinder with special tool 13 3 010 .

NOTE: Illustration shows E46.

Fig. 49: Special Tool 13 3 010
Courtesy of BMW OF NORTH AMERICA, INC.

Remove transmission underbody protection if necessary.

Release union screw (1) on hydraulic line.

Release nut (2) and remove hydraulic line (3) with bracket.

Installation:

Tightening torque: 1AZ, see **21 52 CLUTCH OPERATION (HYDRAULIC)** .

NOTE: Illustration similar.

Version with throttle valve, tightening torque: 12AZ, see **21 52 CLUTCH OPERATION (HYDRAULIC)** .

Fig. 50: Hydraulic Line

Courtesy of BMW OF NORTH AMERICA, INC.

Release nut and remove clutch slave cylinder.

Installation:

Tightening torque: 5AZ, see **21 52 CLUTCH OPERATION (HYDRAULIC)** .

Fig. 51: Locating Clutch Slave Cylinder Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Clean thrust member (1) and contact face on release lever (2).

Lightly grease thrust member (1) on contact face (3).

Fig. 52: Thrust Member And Release Lever
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Spacer between fuel line and pressure hose of clutch slave cylinder must be correctly fitted.

Fig. 53: Spacer Between Fuel Line And Pressure Hose Of Clutch Slave Cylinder

TRANSMISSION

Clutch - Special Tools - X3

21 CLUTCH

21 2 070 GAUGE

Note: For checking lining thickness on clutch drive plate. Replaced in 8/95 by 21 2 080.

Transmission: S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S6S 420G, S6S 560G

Order number: 21 2 070

Gauge

Fig. 1: Gauge (21 2 070)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 100 DRIFT

Note: For centering clutch disc while installing clutch

Transmission: 240/5, 260/5, 265/5, 265/5 Sport, 280/5 Sport

Storage location: C22

Order number: 21 2 100

Drift

Fig. 2: Drift (21 2 100)
Courtesy of BMW OF NORTH AMERICA, INC.

21 2 120 DRIFT

Minimum set: Mechanical tools

Note: For centering clutch disc while installing clutch

Transmission: S6S 420G, S6S 560G

Storage location: C22

SI number: 1 05 90(207)

Order number: 21 2 120

Drift

Fig. 3: Drift (21 2 120)
Courtesy of BMW OF NORTH AMERICA, INC.

21 2 130 DRIFT

Minimum set: Mechanical tools

Note: For centering clutch disc while installing clutch

Transmission: S5D 200G, S5D 250G, S5D 260Z, S5D 310Z

Storage location: C22

SI number: 1 01 91(312)

Order number: 21 2 130

Drift

W21 2 130

Fig. 4: Drift (21 2 130)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 140 CLUTCH CENTERING MANDREL (2 X)

Minimum set: Mechanical tools

Note: For centering clutch disc on flywheel while installing self-adjusting clutch (SAC) - Phase-in of SAC in E46, 09/97

Transmission: S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S6S 420G, S6S 560G

Storage location: C5

SI number: 1 13 96 (104)

Order number: 21 2 140

Clutch centering mandrel (2 x)

Consisting of:

1 = 21 2 141 Clutch centering tool

Note: With M10 screw - Transmission: S6S 420G, S6S 560G

2 = 21 2 142 Clutch centering tool

Note: With M10 screw - Transmission: S5D 200G, S5D 250G, S5D 260Z, S5D 310Z

Fig. 5: Clutch Centering Mandrel (2 X) (21 2 140)
Courtesy of BMW OF NORTH AMERICA, INC.

21 2 170 TENSIONING TOOL

Minimum set: Mechanical tools

In conjunction with: 21 2 180, 21 2 190, 21 2 141, 21 2 142

Note: For resetting adjustment ring and installing self adjusting clutch (SAC) on flywheel without tension.

Series: E34, E36, E38, E39, E46, E52, E53, E60, E61, E83, E85, E86, E87, E90, E91

SI number: 1 16 00 (622)

Order number: 21 2 170

Tensioning tool

Consisting of:

1 = 21 2 171 Star with adjusting spindle

2 = 21 2 172 Clamping claw (1 x)

3 = 21 2 173 Pressure spindle with disk

Fig. 6: Tensioning Tool (21 2 170)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 180 LOCATING RING

Minimum set: Mechanical tools

In conjunction with: 21 2 170

Note: For locating and resetting adjustment ring of SAC clutch on all 6 - and 8-cylinder engines.

Series: E34, E36, E38, E39, E46, E52, E53, E60, E61, E83, E85, E86, E90, E91

Storage location: A44

SI number: 1 16 00 (622)

Order number: 21 2 180

Locating ring

Consisting of:

1 = 21 2 181 Outer ring

2 = 21 2 182 Inner ring

3 = 21 2 183 Pin set

Fig. 7: Locating Ring (21 2 180)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 190 LOCATING RING

Minimum set: Mechanical tools

In conjunction with: 21 2 170

Note: For locating and resetting adjustment ring of SAC clutch on all 4 -cylinder engines.

Series: E34, E36, E38, E39, E46, E52, E53, E83, E87

Storage location: A44

SI number: 1 16 00 (622)

Order number: 21 2 190

Locating ring

Consisting of:

1 = 21 2 191 Outer ring

2 = 21 2 192 Inner ring

3 = 21 2 193 Driver (1 x)

4 = 21 2 194 Pin set

Fig. 8: Locating Ring (21 2 190)

21 2 200 CLUTCH CENTERING TOOL

Minimum set: Mechanical tools

Note: For centering clutch plate during installation. H-transmission

Transmission: GS6-37BZ, GS6-37DZ

Storage location: B44, C44

SI number: 01 10 02 (907)

Order number: 21 2 200

Clutch centering tool

Consisting of:

1 = 21 2 201 Clutch centering tool

Note: With M10 screw Transmission: GS6-37BZ / DZ (H-transmission)

Fig. 9: Clutch Centering Tool (21 2 200)
Courtesy of BMW OF NORTH AMERICA, INC.

21 2 220 GREASE SCRAPER RING

Minimum set: Mechanical tools

Note: Scraping grease off splines of transmission drive shaft

Series: E53, E60, E63, E64, E83, E85, E86, E87, E90, E91, E92

Transmission: GS6-17BG, GS6-37BZ, GS6-37DZ

SI number: 01 10 02 (907)

Order number: 21 2 220

Grease scraper ring

Consisting of:

1 = 21 2 221 Grease scraper ring

Note: Transmission: GS6-37BZ / DZ (H - transmission), GS6-17BG (i-transmission)

Fig. 10: Grease Scraper Ring (21 2 220)
Courtesy of BMW OF NORTH AMERICA, INC.

21 2 230 CLUTCH CENTERING TOOL

Minimum set: Mechanical tools

Note: With M10 screw (G-transmission)

Transmission: GS6-53BZ, GS6-53DZ

Storage location: A47

SI number: 1 03 03 (960)

Order number: 21 2 230

Clutch centering tool

Fig. 11: Clutch Centering Tool (21 2 230)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 240 GREASE SCRAPER RING

Minimum set: Mechanical tools

Note: For scraping grease on spline shaft teeth of transmission input shaft (G-transmission)

Transmission: GS6-53BZ, GS6-53DZ

Storage location: A47

SI number: 1 03 03 (960)

Order number: 21 2 240

Grease scraper ring

Fig. 12: Grease Scraper Ring (21 2 220)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 250 CLUTCH CENTERING TOOL

Minimum set: Mechanical tools

Note: For centering drive plate during installation. Clutch plate with modified toothing.

Transmission: S5D 250G (B transmission)

Series: E46, E46/16, E46/2, E46/3, E46/5, E46/C, E83, E87

Transmission: S5D 250G

Storage location: A50

SI number: 1 20 04 (135)

Order number: 21 2 250

Clutch centering tool

Fig. 13: Clutch Centering Tool (21 2 250)

Courtesy of BMW OF NORTH AMERICA, INC.

21 2 270 CLUTCH CENTERING SLEEVE

Minimum set: Mechanical tools

Note: For centering drive plate to driven plate when installing clutch on engine. Transmission: GS6-53DG with M57T2, GS6-53BZ with N54 in E92, E60.

Transmission: GS6-53BZ, GS6-53DZ

SI number: 1 20 05 (218)

Order number: 21 2 270

Clutch centering sleeve

Fig. 14: Clutch Centering Sleeve (21 2 270)
Courtesy of BMW OF NORTH AMERICA, INC.

21 5 010 ADAPTER

In conjunction with: 17 0 002

Note: For expansion tank when bleeding hydraulic clutch system on automatic transmission

Transmission: S6S 420G

Storage location: C17

SI number: 1 06 97 (186)

Order number: 21 5 010

Adapter

Fig. 15: Adapter (21 5 010)
Courtesy of BMW OF NORTH AMERICA, INC.

21 5 020 BLEEDER FLASK

In conjunction with: 21 5 030

Note: For hydraulic fluid (Pentosin) - for bleeding hydraulic clutch system on sequential M - transmission.

Transmission: S6S 420G

SI number: 1 15 97 (211)

Order number: 21 5 020

Bleeder flask

GENERAL INFORMATION

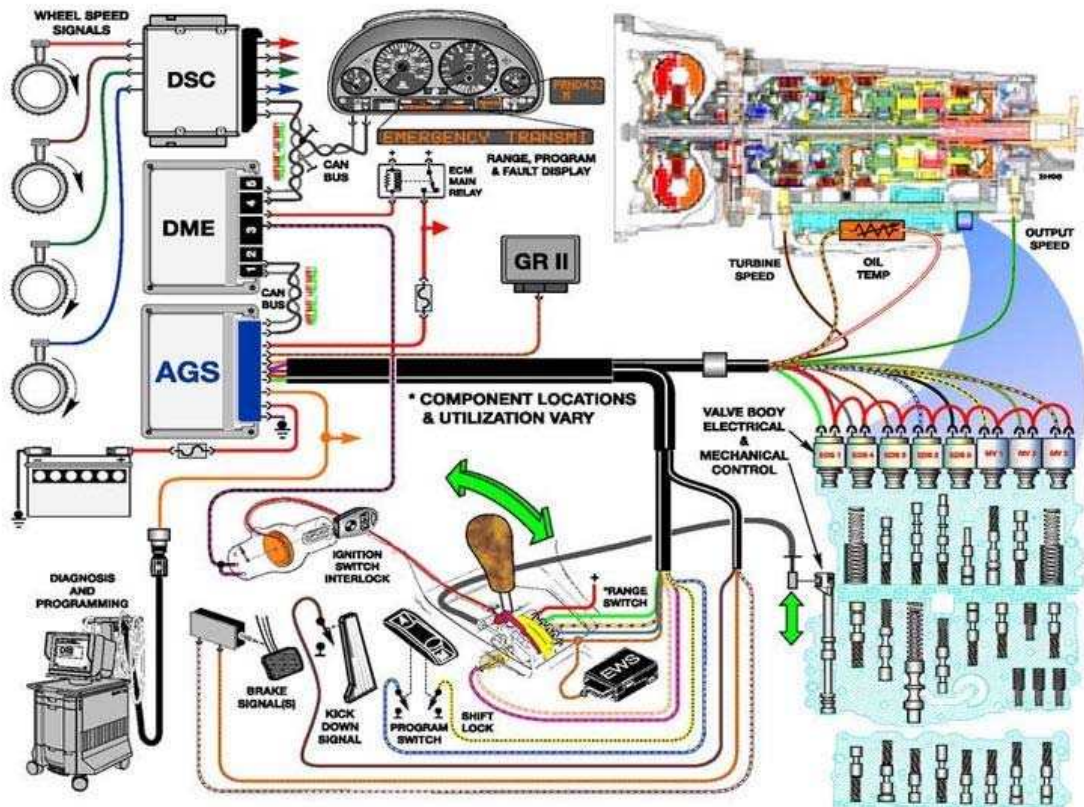

Electronic Transmission Control - Overview

ELECTRONIC TRANSMISSION CONTROL

PURPOSE OF THE SYSTEM

Electronically controlled transmissions were introduced on BMW products in 1986 on 5 and 7 series vehicles. Currently EH (Electro-hydraulic) transmissions are offered on almost every production model (Except E46 M3 and E39 M5). EH transmissions offer the following benefits to the driver:

- Increased driving safety by reducing fatigue. All shifts are automatic as opposed to manual transmissions which require more driver interaction.
- Increased fuel economy through use of lock up torque converter.
- Increased fuel economy through optimized shift points.
- Improved shift comfort by use of "Overlap Shift" technology (ZF).
- More available features through the use of CAN bus technology.

G03403779

Fig. 1: Identifying Electro-Hydraulic Transmission Inputs/Outputs
Courtesy of BMW OF NORTH AMERICA, INC.

The EH Control System is designed to work in conjunction with the engine electronics for precise shift control. The TCM receives information on engine RPM, load and throttle position to provide optimum shift points to maximize fuel economy and driver comfort.

The function of an EGS System is to:

- Monitor all operating conditions through input signals
- Continually assess operating conditions by processing input data and select the appropriate operating program for current conditions.
- Activate transmission system components and to communicate with other drivetrain control systems.
- Respond to driver selected driving program (Economy, Sport or Manual).

In addition to providing shift control, the TCM also adapts to changing conditions within the transmission by monitoring slip ratios and modifying line pressure. This increases the life of the transmission and reduces maintenance and adjustments. The TCM controls the operation of the Lock-Up Torque Converter which further increases economy.

On current models, the TCM also has the capability of adapting to driver habits and responds to changing environmental conditions. Items such as rate of throttle input and kickdown requests are monitored to select the most appropriate shift program.

The EGS system is also required to maintain occupant safety, safeguard drivetrain damage, improve vehicle emissions and operate in fail-safe mode when a malfunction occurs.

G03403780

TRANSMISSION VERSION AND CONTROL SYSTEMS

Each BMW Electro-hydraulic transmission has a corresponding control system. They are designated "GS" which stands for Transmission Control. This acronym is from the German words **G**etriebe **S**teuerung. Each transmission can have more than one control system, this depends upon application (model year, series etc.). Below is a listing of ZF control systems used on BMW vehicles, Hydramatic control systems are shown on the opposing page.

ZF Control Systems

TRANSMISSION IDENTIFICATION

BMW automatic transmission are manufactured by two suppliers for the US market:

- **Zahnradfabrik Friedrichshafen:** Commonly referred to as ZF. ZF manufactures both manual as well as automatic transmissions.
- **GM Powertrain - Hydramatic:** Hydramatic is a manufacturing division of General Motors located in Strasbourg, France. Hydramatic supplies automatic transmissions to BMW for four and six-cylinder vehicles.

BMW has developed an internal numbering system for their transmissions for ordering parts, information research and identification. Also, each transmission manufacturer uses an internal identification system. Here is a breakdown of these identification codes:

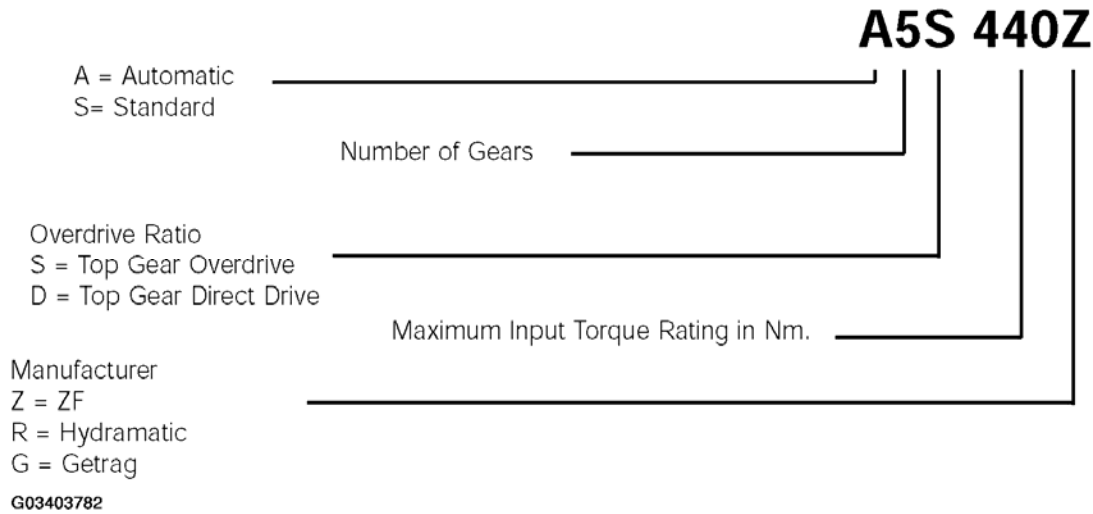

Fig. 4: Identifying BMW Identification Code Breakdown
 Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 5: Identifying ZF Identification Code Breakdown
 Courtesy of BMW OF NORTH AMERICA, INC.

Hydramatic Transmissions have internal designations, however they are not used often. The internal code for the A4S310/270R is 4L30-E and the A5S360/390R is 5L40-E.

Transmission ID Tag Location

In order to identify BMW transmissions there are identification tags located externally on the transmission case. The tag contains information such as Manufacturer, Serial number, transmission type etc. This information is needed when ordering parts, referencing bulletins and calling for technical assistance.

- **ZF - Tag is Located on -**
 1. Right hand side (passenger side) of transmission case. (5HP30 and 5HP18)
 2. Left hand side (drivers side) of transmission case. (6HP26Z, 5HP24 and all 4HP)
 3. Rear under output shaft. (5HP19)

Transmission Control Module

The TCM receives inputs, processes information and actuates the output elements to provide optimal shift points. The TCM is programmed for maximum shift comfort and fuel economy. The TCM on most BMW vehicles is located in the E-Box next to the ECM (DME).

There are several types of TCM housings:

- 35 Pin TCM (TCU) - used on the 4HP transmissions
- 55 Pin TCM - used on the A4S310R (THM-R1)
- 88 Pin TCM - used on all others up to 98
- 134 Pin TCM - used on all BMW transmission from the 99 model year. (Note- the 134 pin TCM was introduced on the 98 Models equipped with the A5S440Z).

The 134 Pin TCM is also referred to as SKE (Standard Shell Construction). The SKE housing uses 5 separate connectors. On transmission applications only three connectors 1, 3 and 4) are used. Connectors 2 and 5 are blank and are **NOT** used. The connectors are blue in color to avoid confusion with the ECM (DME) connectors which are black.

!34 Pin control modules are supplied by Bosch for ZF transmissions and Siemens for Hydramatic transmissions. Bosch and Siemens control modules are **NOT** interchangeable.

Fig. 10: Identifying Transmission Control Module
Courtesy of BMW OF NORTH AMERICA, INC.

Turbine Speed Sensor

The Turbine Speed Sensor is used to provide input (turbine) shaft speed information to the TCM (EGS). The input shaft speed signal is used in conjunction with the output shaft speed signal to determine gear range and slip time information for processing in the TCM. Not all BMW transmissions use a turbine speed sensor. Some TCM's use the TD (engine speed) signal to determine input shaft speed. All transmissions with the exception of the A5S325Z use an inductive type sensor which generates an AC analog signal. The A5S325Z currently uses a Hall Effect Turbine Speed Sensor which will send a digital square wave signal to the TCM.

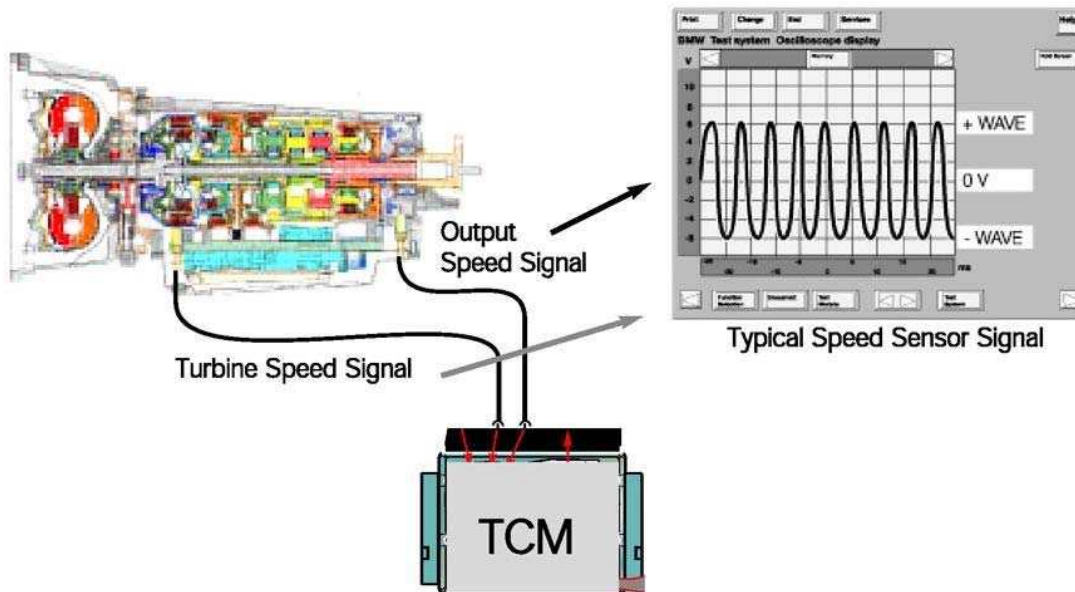

4HP22/24 (EH), A4S310/270R: These transmissions do not use a Turbine Speed Sensor. The TD signal is used to determine input shaft speed. The TD signal is an output signal of the DME control unit.

A5S310Z, A5S325Z, A5S440Z, A5S560Z, A5S360/390R: These transmission use a turbine speed sensor. The TD signal is also used with the turbine speed signal to allow the TCM to monitor Torque Converter Clutch operation. The TCM can control torque converter clutch slippage and also monitor for faults.

Output Shaft Speed Sensor

The Output Shaft Speed Sensor is used to provide output shaft speed information to the TCM. The output shaft speed signal is used in conjunction with the turbine speed signal to provide the TCM with information on gear ranges and slip times.

All BMW electronic transmissions have an output shaft speed sensor. The output shaft speed sensor is an inductive type which will generate an AC analog signal to the TCM. The frequency and amplitude of the signal will increase as output shaft speed increases. The exact location of the output shaft speed sensor varies by transmission model.

G03403789

Fig. 11: Identifying Output Shaft Speed Sensor Graph
Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Oil Temp Sensor

The TCM is provided with transmission oil temperature information via a temperature sensor. On most BMW transmissions, the sensor is an NTC element which is part of the transmission internal wiring harness.

4HP22/24 (EH): These transmissions do not use a transmission oil temperature sensor. There are no transmission oil temperature influenced features on the 4HP transmissions.

All Except A5S360/390R, GA6HP26Z: The transmission fluid temp sensor is part of the transmission internal wiring harness. On these transmissions, the sensor cannot be replaced separately. The harness must be replaced.

A5S360/390R transmission: the sensor is a separate, replaceable sensor that can be unplugged from the harness.

GA6HP26Z: the sensor is located in the Mechatronics Module, which is located inside of the transmission.

NOTE: The Mechatronics Module is not currently serviceable at this time. Contact the BMW Technical Hotline in the event of a failure. Do not attempt any repair or replacement of the Mechatronics Module.

The transmission oil temperature information is used to:

- Initiate the Warm Up Program
- To inhibit TCC operation until a specified temperature has been reached.
- For determining fluid level when used with diagnostic equipment.

G03403790

Fig. 12: Transmission Oil Temperature Sensor Is Connected To TCM
Courtesy of BMW OF NORTH AMERICA, INC.

The transmission oil temperature sensor is connected to the TCM via a 5 Volt reference and a circuit ground. As transmission oil temperature increases, the circuit resistance and voltage decrease proportionately.

Kickdown Switch

The TCM receives a kickdown request via one of two possible methods:

- The kickdown signal is a direct ground input to the TCM. The kickdown input is provided by a kickdown switch located under the accelerator pedal. This method is used on most BMW vehicles without electronic throttle control systems (except M52TU with MDK).

Fig. 13: Identifying Kickdown Switch
Courtesy of BMW OF NORTH AMERICA, INC.

- The kickdown request is provided by the ECM (DME) via the CAN bus. The kick down request originates from the PWG. There is no separate switch in the PWG. When the PWG voltage reaches approximately 4.5 volts, the ECM will process a kickdown request to the TCM via CAN. The PWG contains a kickdown detent to simulate the feel of a kickdown switch.

This method is used on the M62TU, M54, M73, M73TU, N73 and N62 engines.

Fig. 14: Identifying Kickdown Signal Is A Direct Ground Input To
Courtesy of BMW OF NORTH AMERICA, INC.

Brake Switch

The brake switch is located on the brake pedal linkage. The brake switch signal is an input to the TCM which is used for:

- De-activation of the shift lock solenoid. When the ignition key is turned to KL15 the shift lock is active. The shift lock solenoid is de-activated when the brakes are applied.
- De-activate the Torque Converter. The TCC is deactivated whenever the brake is applied. (only on Hydramatic Transmissions).

There are two types of brake switches used on BMW vehicles:

- On early vehicles such as E32, E34, E36, E24, E28 and E31 the brake switch is a double-contact mechanical switch. There is a brake light circuit and a brake test circuit. The brake test circuit is used for a plausibility check to indicate faults within the brake light circuit.
- On the E38, E39, E46, E65/66, E85 and E53 the brake switch is a hall effect type switch. The electronic switch is also monitored for faults and plausibility.

Fig. 15: Identifying Brake Switch Signal Is An Input To TCM
 Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Range Selector Switch

The range selector switch is an input to the TCM. The input is used by the TCM to determine the position of the manual valve. The range switch uses the familiar "coded input" signal to determine selector lever position. On all transmissions except the A5S360/390R, the range switch uses a 4 wire configuration to determine 7 range

selector positions. The A5S360/390R uses a five wire arrangement.

Most range switches are located on the transmission case with some exceptions. The E36 with the A4S270/310R the range switch is located in the center console on the selector lever assembly. The E39 with A4S270R the range switch is located on the transmission case and is adjustable. The range selector switch on the A5S360/390R is located inside the transmission housing. GA6HP26Z is part of the Mechatronics Module.

G03403794

Fig. 16: Identifying Transmission Range Selector Switch
Courtesy of BMW OF NORTH AMERICA, INC.

The range switch can be checked by using "Status Requests" in the DISplus or GT-1.

A multimeter or an oscilloscope can also be used to check the range switch. If the reading on "Status Requests" does not match the actual selector lever position, there will be various transmission malfunctions.

Use the switch logic chart to diagnose faults in the switch.

In the example below, the range switch is in neutral. Using the logic chart, switches L1, L2 and L3 are closed providing B+ voltage to the corresponding pins of the TCM. Switch L4 is open and no voltage is sent to the TCM. Malfunctions in the range switch or wiring can cause various shifting complaints and possible No-Start complaints.

Fig. 17: Identifying Transmission Range Selector Switch Logic Chart
 Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Program Switch

The transmission program switch is used to switch between various operating modes of the transmission. The normal default mode of the TCM is Economy which is indicated in the program display as "E". Economy mode allows the transmission to operate in the most efficient mode. Shift priorities are for maximum economy and shift comfort. On some vehicles the program switch is designated "A" for economy mode. Program switches come in 2 or 3 position configurations. Early vehicles with the 4HP (Early E7) used a rotary program switch.

The TCM can also be switched to "Manual Mode" which on some vehicles is designated "Winter Mode". Manual mode is used to start the vehicle off in a higher gear when encountering slippery conditions. The program display will indicate "M" (manual) or an asterisk symbol for "Winter Mode".

Sport Mode is the third operating mode that is available. Sport mode allows for a slightly delayed and more aggressive shift. Sport mode is obtained a number of ways. On vehicles with 2 position program switches, moving the selector lever out of drive to 4, 3, or 2 with the program switch in Economy will allow Sport mode. On vehicles with 3 position program switches, Sport mode can be obtained by switching to "S".

Fig. 18: Identifying Transmission Program Switch
 Courtesy of BMW OF NORTH AMERICA, INC.

Steptronic Components

The Steptronic system uses additional components not found on a conventional system. These components consist of a manual switch and an Up/Down microswitch. Otherwise, the Steptronic system uses the same transmission and TCM.

The TCM monitors the Steptronic shifter position from P through D via the conventional range selector switch located on the transmission. The Range Selector Switch provides positions P through D to the TCM because the automatic gate of the shifter only travels through these positions.

When the Steptronic Shifter is moved to the left 15 degrees into the manual gate, the TCM receives a ground input from the manual gate switch. The ground signal is provided to the TCM through the Transmission Position Indicator. The transmission position indicator also provides range position signaling to the range position indicator in the shift console.

Steptronic was introduced on the E31 850Ci (10/94) and the 840Ci (1/96). Steptronic was subsequently introduced into the E38, E39, E46, E36/7 and the E53.

The Steptronic system can be diagnosed through "Status Requests" with the DISplus or GT-1.

From 2002 model year the Steptronic shifter has changed slightly. Downshifts are now achieved by moving the selector lever forward and upshifts are now rearward.

G03403797

Fig. 19: Identifying Steptronic Components

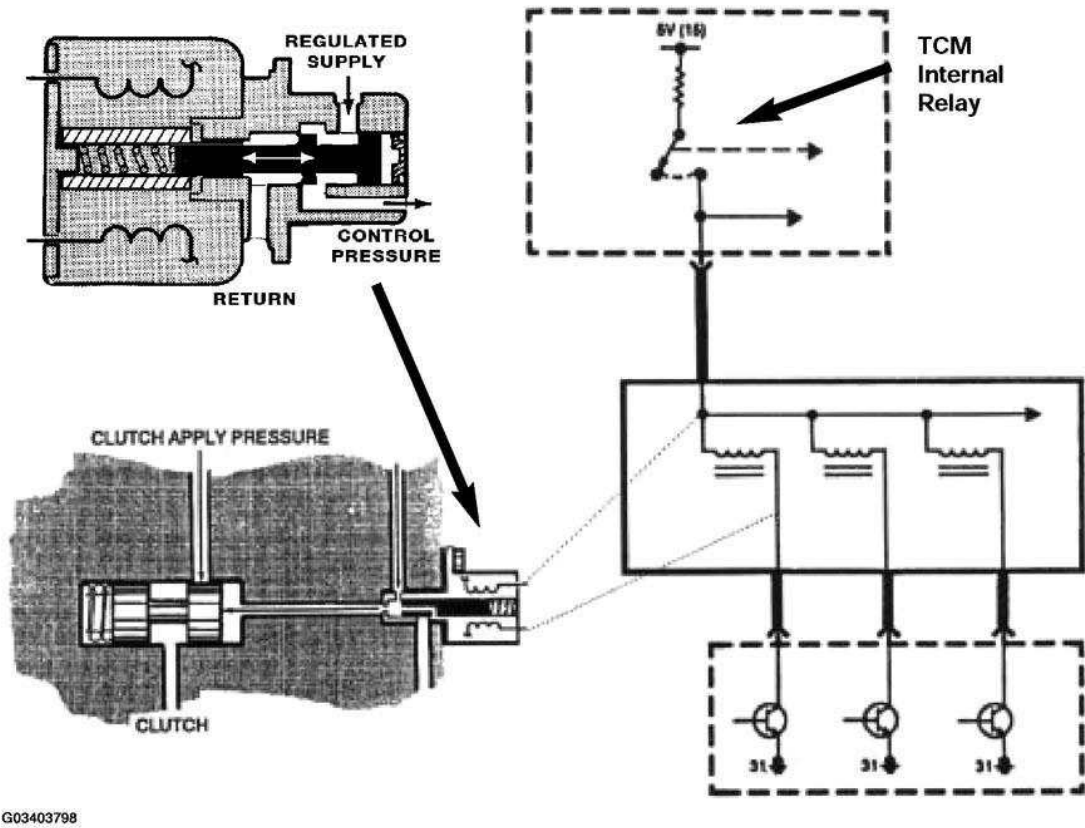

Courtesy of BMW OF NORTH AMERICA, INC.

Magnetic Valves

Magnetic Valves (MV) are used to electronically control hydraulic fluid flow to the various shift elements within the transmission. Magnetic valves are located on the valvebody and replaceable as separate components. In ZF transmissions, MV valves are designated MV1, MV2, MV3 etc. In Hydramatic transmissions, they are designated Shift Valve A, Shift Valve B, Shift Valve C etc.

The magnetic valves are controlled by the TCM. They are supplied power by an internal TCM relay and are ground controlled. The TCM switches one or more of the MV's on or off in various combinations to achieve various shifts. Most transmission have 2 or 3 MV's to control shifting.

In addition to controlling shifts within the transmission, magnetic valves are also used for overlap shifting and pressure regulation on some transmission applications. For example MV4 and MV5 are used for overlap shifting in the A5S310Z. MV5 is used for pressure regulation on the 4HP22/24EH transmissions. When used for pressure regulation, the magnetic valves are pulse width modulated by the TCM.

G03403798

Fig. 20: Identifying Magnetic Valves Are Pulse Width Modulated By TCM
 Courtesy of BMW OF NORTH AMERICA, INC.

Pressure Regulating Solenoids

Pressure Regulating Solenoids are used to modify line pressure for use in the transmission. There are numerous terms for these solenoids depending upon transmission type and manufacturer. ZF transmissions use the term EDS, while Hydramatic Transmissions use the term DR solenoid, Force Motor Solenoid and Variable Bleed Solenoid (VBS).

EDS valves are used for main line pressure regulation, TCC application and Overlap Shift Pressure Control on the A5S440Z and A5S560Z. All pressure regulating solenoid are controlled by Pulse Width Modulation.

Using the example in the picture below, this is a section of the A5S440Z/560Z valve body. The EDS valves are used for the following:

- EDS 1 is used for main line pressure regulation
- EDS 2, 3 and 5 are used Overlap Shift Pressure Control
- EDS 4 is used for TCC application. (GWK) Gradually applied TCC.

G03403799

Fig. 21: Identifying Pressure Regulating Solenoids

Hydramatic Pressure Regulator

The valve body shown at the right is from the A5S360/390R. Note the location of the main pressure regulator. Depending upon the reference text, the pressure regulator is also known as the Force Motor Solenoid, Variable Bleed Solenoid or PC Solenoid.

Instrument Cluster

The cluster is used to report information to the driver regarding transmission status. There are three items of information needed by the driver:

- **Transmission Range** - this indicates the position of the range selector lever. The driver needs to know whether the transmission is in P, R, N, D, 4, 3, or 2.
- **Transmission Program** - this indicates the mode of operation. There are 3 modes, Economy, Manual and

Sport.

- **Transmission Fault Information** - the driver needs to know of there is a malfunction in the transmission. Depending upon application, transmission faults can be indicated by an icon or by a "Transmission Program" message in the instrument cluster display matrix.

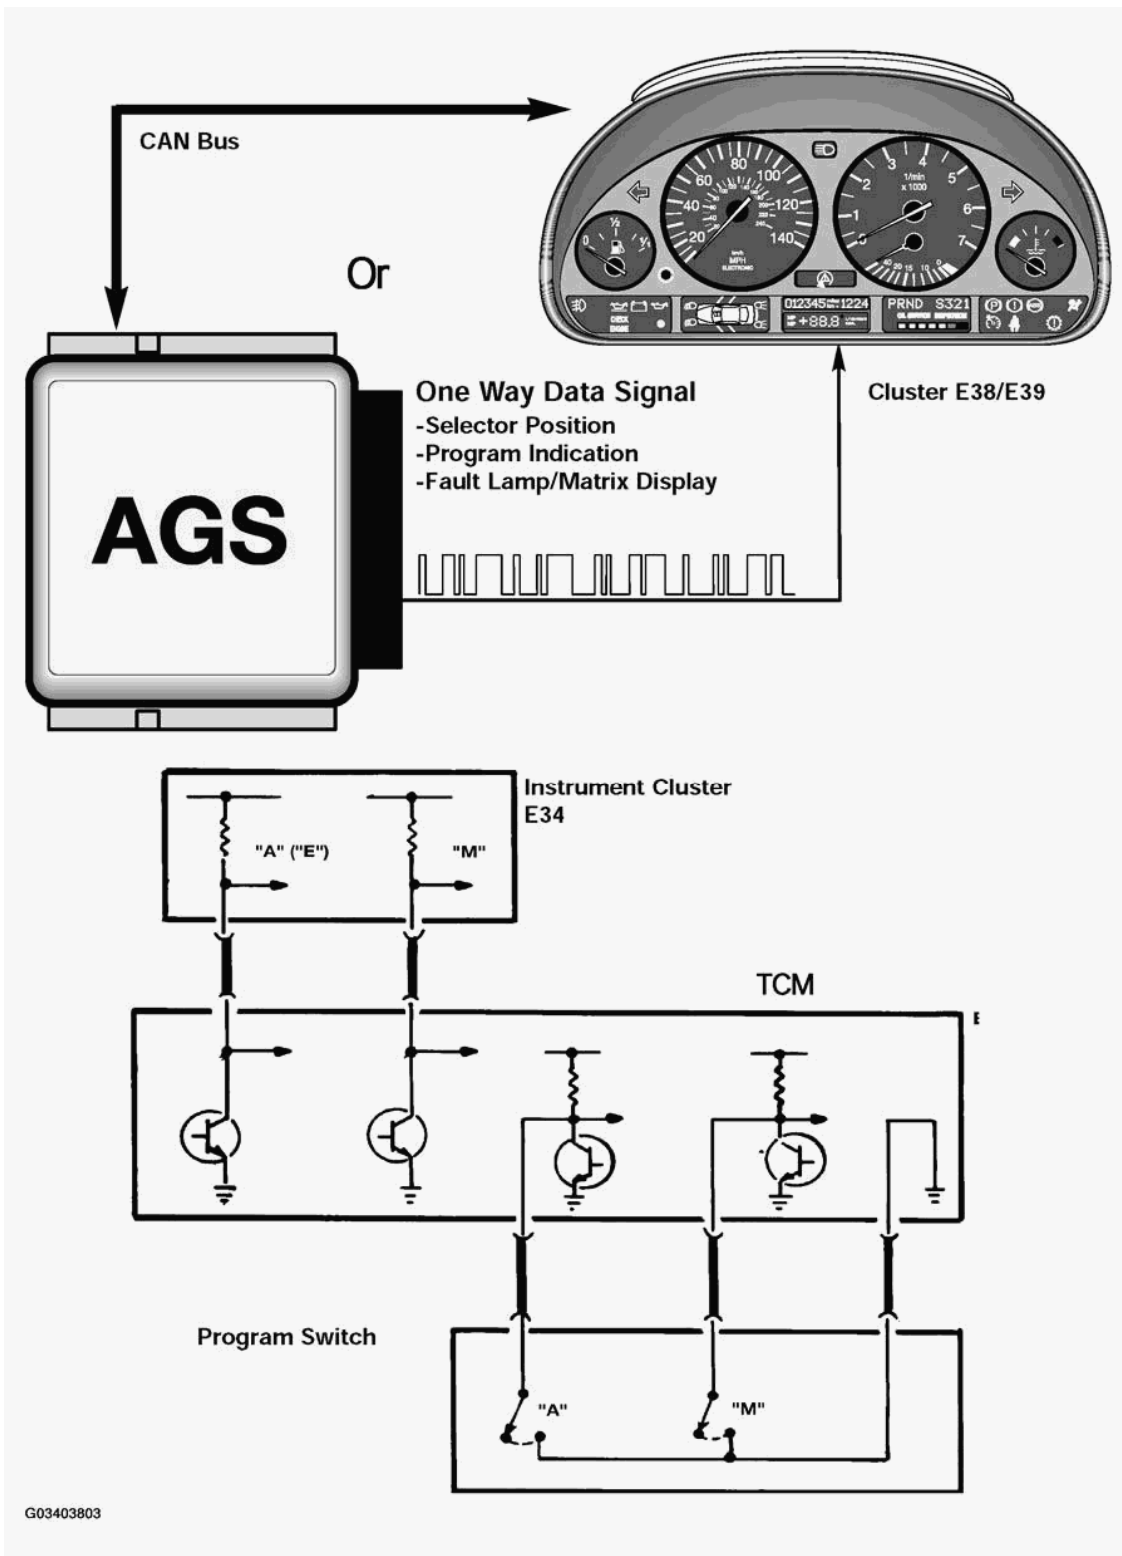

Fig. 24: Identifying Instrument Cluster
Courtesy of BMW OF NORTH AMERICA, INC.

Depending upon vehicle model and transmission, these pieces of information arrive at the cluster through different methods.

- The most current method for this information to arrive at the cluster is through the CAN bus. The cluster processes this information from the TCM via CAN.
- On early E38 and E39 vehicles there is a "One Way Data Signal" from the TCM to the cluster. There is a one way serial data line that transfers this information to the cluster. On later vehicles, the cluster was introduced to the CAN bus and this method was no longer used. This was used on the E38 vehicles to 5/97 and E39 vehicles to 8/97 production.
- Early vehicles such as E32, E34, E36 etc. used a various combination of methods to transfer this data. Some clusters use the "Coded Input" method for the program indicator. Fault indication is done by a ground circuit through the TCM. Transmission range indication is achieved by a direct connection between the range switch and cluster or by a coded input to cluster.

There will be a FC6 in the Kombi when the TCM goes into fail-safe mode.

G03403803

Fig. 25: Identifying Instrument Cluster Circuit
 Courtesy of BMW OF NORTH AMERICA, INC.

Adaptive Hydraulic Pressure Control

Pressure adaptation has been a feature of ZF automatic transmissions since the 4HP22EH. The TCM will maximize shift quality by adapting to transmission wear over time. The TCM will adjust transmission shift pressures to compensate for wear in the multi-plate clutches. This is accomplished by monitoring the input and output speeds of the transmission. When the transmission shifts, the TCM monitors the time that it takes to accomplish the shift. The time change in gear ratio is monitored and compared to an internal time value in the TCM. If the ratio change takes more time than the stored value, the TCM will compensate by adjusting the transmission shift pressures via the EDS valve solenoids. The adaptation value is stored in the TCM. This adaptation values can only be cleared by the diagnostic tester (DIS plus or GT-1).

NOTE: DO NOT clear adaptation values unless directed to do so by technical assistance. Clearing pressure adaptations should not be done to resolve a customer complaint. The only time that you would need to do so is after a transmission or valve body replacement or software change. Also it is important not to confuse pressure adaptation with AGS features. AGS features will be discussed later in this chapter. AGS features are not stored on a long term basis and will not be cleared when the pressure adaptations are cleared. Driving style is NOT stored.

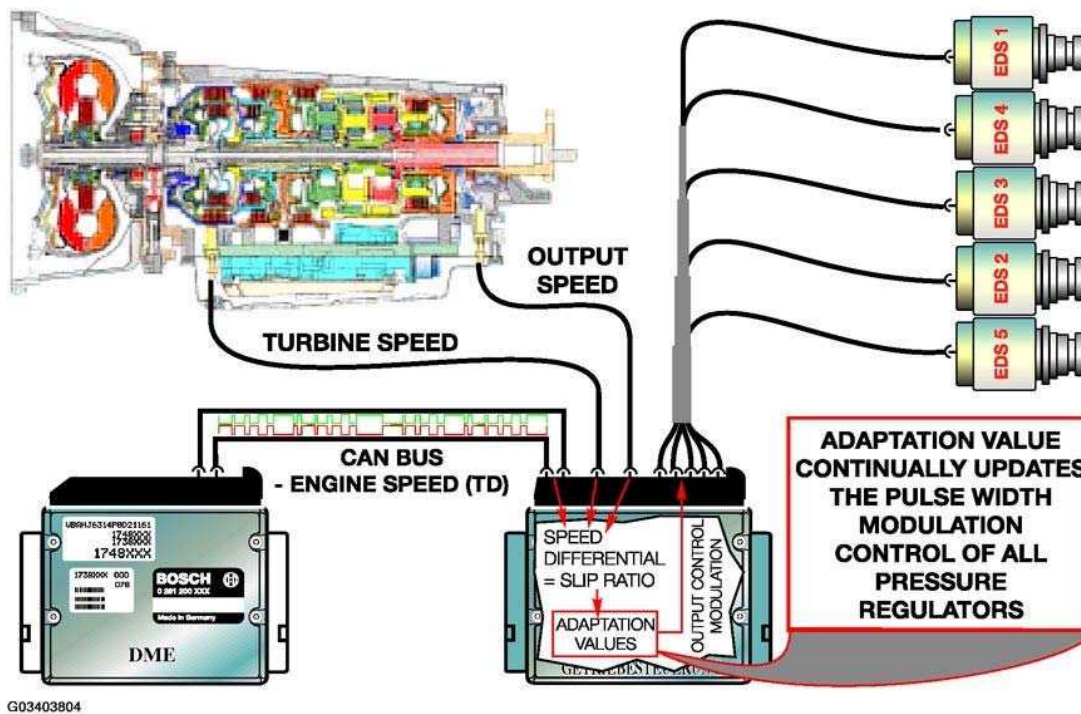

Fig. 26: Identifying Adaptive Hydraulic Pressure Control
Courtesy of BMW OF NORTH AMERICA, INC.

Downshift Protection

Downshift protection is a feature that prevents unwanted or improper downshifting. If the range selector were moved to a lower gear at a high road speed, engine damage could occur from an unintended over-rev. This feature will prevent engine over-rev by delaying or preventing the unwanted downshift until the proper road speed is achieved. The result is increased safety by preventing unwanted deceleration slip.

Reverse Lockout

The TCM will lockout reverse above 3 MPH to prevent drivetrain damage. The range selector lever will go into the reverse detent, but reverse will not engage. This is achieved by the TCM through hydraulic intervention. The transmission will appear to be in neutral.

NOTE: Reverse Lockout is not operative when in fail-safe.

Engine Warm Up Cycle

The transmission shift points are modified after cold start to raise engine RPM during shifting. This allows for a faster engine warm up and reduction of catalyst warm up time. The TCM uses the transmission oil temperature information to determine the implementation of this function.

The warm up phase program will be terminated if any of the following conditions exist:

- The vehicle exceeds 25 MPH or
- Transmission oil temperature exceeds 60 Degrees Celsius or
- A Maximum of three minutes is exceeded.

ASC/DSC Shift Intervention

During ASC/DSC regulation upshifts are inhibited to enhance the effectiveness of tractional control. Depending upon vehicle model, this action can take place via the CAN bus or a dedicated shift intervention signal wire. On later model vehicles where the ASC/DSC module is connected to the CAN bus, the shift intervention signal is sent to the TCM via CAN.

Torque Reduction

In order to allow a smoother shift and reduce load on the transmission, engine torque is reduced during shifting. This is accomplished by a signal that is sent from the TCM (EGS) to the ECM (DME) during shifting. The ECM will retard timing momentarily during the shift for a few milliseconds. This timing change is transparent to the driver. Depending upon application, the torque reduction signal is sent over a dedicated wire or a signal over the CAN bus.

Emergency Program

When a malfunction occurs within the transmission, the Emergency program (fail-safe mode) will be initiated. The Emergency Program will prevent unintended gear engagement and ensure driver safety. The following will occur during Fail-safe Operation:

- All shift solenoids are de-energized via TCM internal relay.

- The pressure regulation solenoid is de-energized resulting in maximum line pressure.
- The Torque Converter Clutch is de-activated.
- The Reverse Lockout function is cancelled.
- Shift lock solenoid is de-energized.
- Fault indicators are active.

The fault indicator varies depending upon model, year and cluster type etc. High version instrument cluster will display a message in the matrix display. Vehicles with low version clusters will display a fault symbol in the cluster.

During fail-safe mode the transmission will be shifted into a higher gear to allow the vehicle to be driven to a service location. Depending upon application, the transmission will shift into 3rd or 4th gear (on a 4spd) and 4th or 5th gear (on a 5 spd). For example the A5S360R transmission will go into 5th gear when there is a malfunction and 4th when there is a power failure to the TCM. Since pressure regulation ceases, the shift to fail-safe mode will be abrupt or harsh, unless the transmission is already in the fail-safe gear.

On newer OBD II compliant vehicles, the MIL light will also be illuminated by the ECM (DME).

NOTE: When diagnosing transmission related complaints, it is possible to have an erroneous fault indicator warning. Faults in the cluster can cause a false indication or "Trans Program" message. One indication of this scenario would be a transmission fault message in the cluster with no transmission faults stored in the TCM.

E46 Transmission Fault Indicator

G03403805

Fig. 27: Identifying E46 Transmission Fault Indicator
Courtesy of BMW OF NORTH AMERICA, INC.

AC Compressor Load Sensing (Hydramatic Transmissions)

When the AC Compressor is switched on, additional load is placed on the engine. To compensate for the additional load, the TCM modifies line pressure and shift points. On the THMR-1, the TCM receives these signals via a direct connection to the AC compressor control circuit.

On vehicles equipped with CAN bus technology, the "AC on" signal is sent to the TCM from the DME as a CAN bus message.

G03403806

Fig. 28: Identifying AC Compressor Load Sensing (Hydramatic Transmissions)
 Courtesy of BMW OF NORTH AMERICA, INC.

Shift Lock

The shift lock solenoid is mounted on the selector lever assembly and locks the selector lever in Park or Neutral when the ignition is ON. This prevent the selection of a gear unless the brake pedal is depressed. The solenoid is activated by a switched ground from the TCM. Power is supplied by the TCM internal relay. During fail-safe operation, the shift lock is disabled. On later models, the shift lock will also be active when the TD signal is present and the shifter will remain locked above an engine speed of 2500 RPM regardless of brake application.

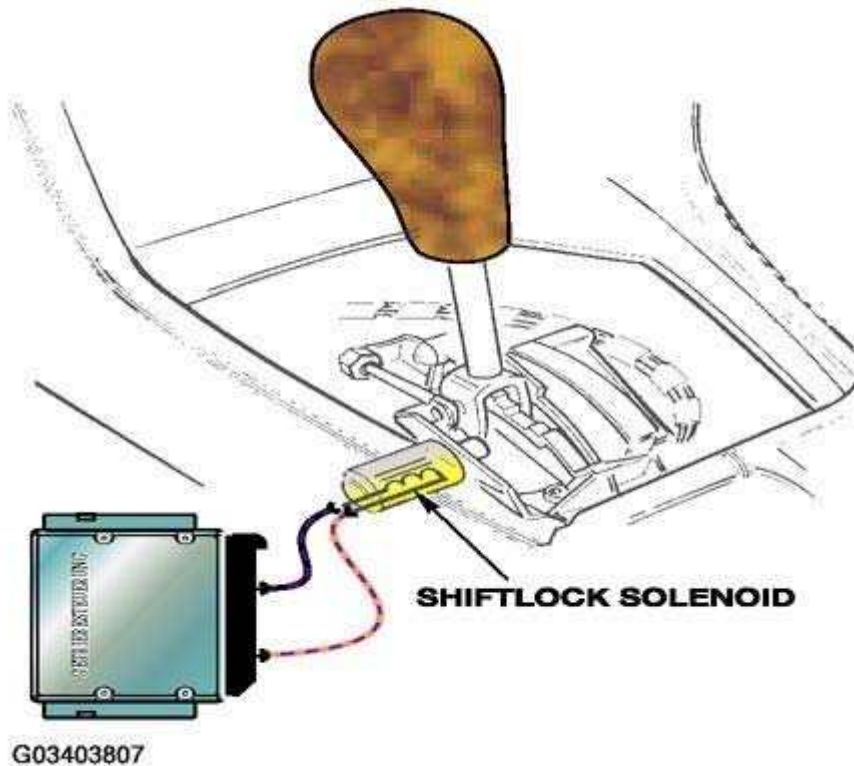

Fig. 29: Identifying Shift Lock Solenoid
 Courtesy of BMW OF NORTH AMERICA, INC.

Torque Converter Clutch

Since the efficiency of the torque converter at coupling speed is approximately 1.1 to 1, fuel economy is compromised. To offset this a torque converter clutch was added on EH controlled transmissions. The torque converter clutch locks the turbine to the converter housing. This creates a mechanical coupling with a ratio of 1:1. This can only be achieved at higher engine speeds, the torque converter clutch must be disengaged at low engine speeds to prevent stalling.

There are two methods for controlling the torque converter clutch on BMW transmissions:

- **A4S310/270R, 4HP22/24 EH, A5S310Z** - These transmissions use an on/off control method to lock and unlock the torque converter. The Torque Converter Clutch is either completely engaged or disengaged. This method of engagement provides an abrupt sensation when the TCC is locking and unlocking. This abrupt sensation can be undesirable to some drivers.
- **A5S560Z, A5S440Z, A5S325Z, GA6HP26Z, A5S360/390R** - These transmissions use a gradual approach to TCC control. The TCC is gradually applied and released, this method reduces the abrupt feel of the on/off type TCC. The TCC solenoid is controlled by pulse width modulation. This allows fluid to be gradually introduced and released to the TCC.

The TCC is spring loaded to the engaged position. Pressurized fluid releases the TCC, when the pressurized fluid is released, the TCC is engaged. Depending on transmission application, the TCC can be engaged in 3rd, 4th or 5th gear. The TCC must be disengaged at low speeds to prevent stalling.

Shift Solenoid Control

Magnetic valves are used to direct the flow of transmission fluid to control shift elements in the transmission. Another Term for "Magnetic Valve" is "Shift Valve". Magnetic valves (MV) are solenoids controlled by the

TCM. They can be switched by B+ or B-.

On ZF transmissions, magnetic valves are designated MV1, MV2, MV3 etc. On GM transmissions they are designated Shift Valve A, Shift Valve B, Shift Valve C etc.

Either valve can be checked for proper resistance using a multi-meter, DISplus or GT-1. Also, the "Activate Components" function can be used to check the Magnetic valves. Most all magnetic valves are switched on/off instead of Pulse Width Modulation (PWM).

All magnetic valves (except THM R-1 to 12/95) are supplied power from an internal relay located in the TCM. The magnetic valves are switched on and off by final stage transistors in the TCM. During fail-safe operation, power to all MV's is switched off by the internal relay.

Magnetic valves are located on the valve body. They can be replaced individually.

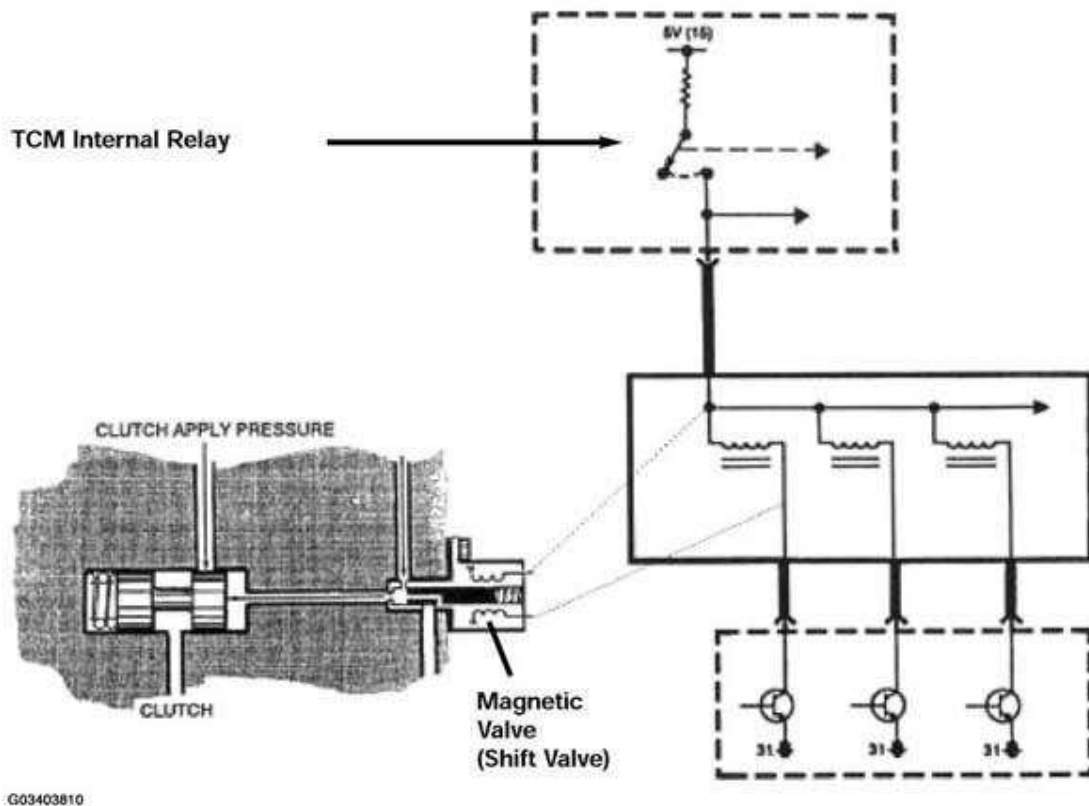

Fig. 32: Identifying Shift Solenoid Control Circuit Diagram
Courtesy of BMW OF NORTH AMERICA, INC.

Pressure Regulation

Pressure regulating solenoids modify line pressure for hydraulic operation. Solenoids for pressure regulation are referred to as EDS valves in ZF transmissions. GM transmissions have a few terms such as Force Motor Solenoid, Variable Bleed Solenoid, and DR solenoid. Regardless of the name used, they are all used to control

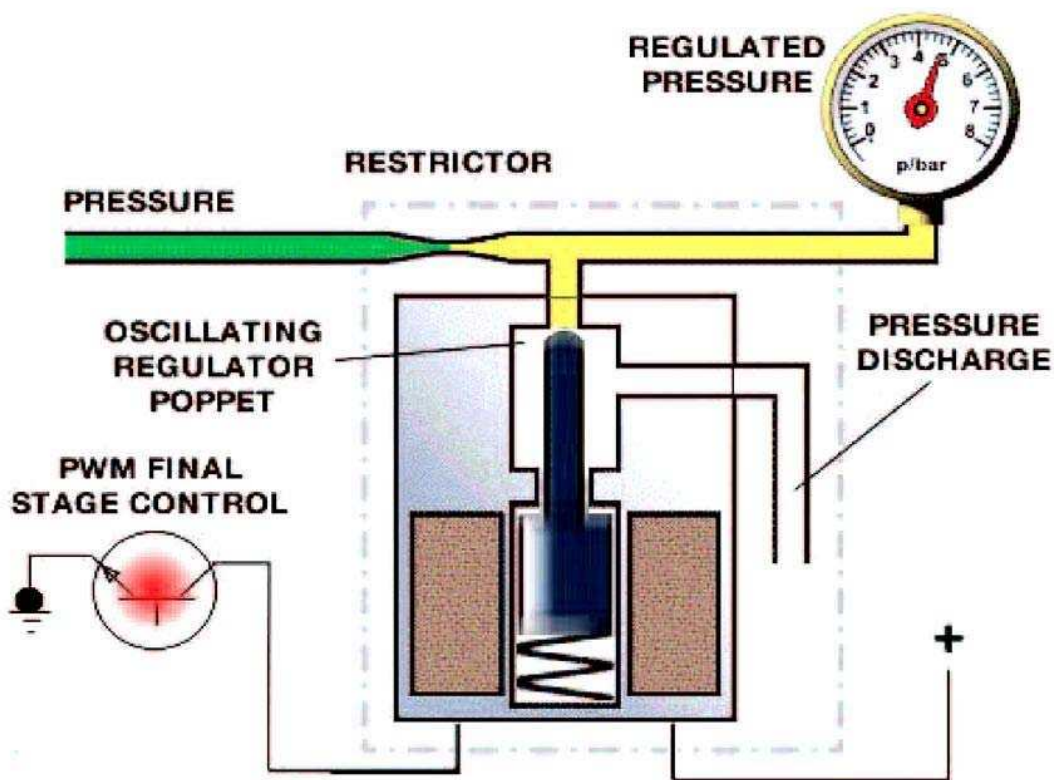

main line pressure based on throttle position and engine load.

On ZF transmissions, EDS valves are also used to control "Overlap Shifting". This allows for improved shift comfort by controlling pressures during shifting.

Depending upon transmission application, pressure regulating solenoids can be controlled using Pulse Width Modulation on B+ or B-.

The TCM will increase line pressure by regulating current flow to the pressure regulator. Current flow is controlled by pulse width modulation. When the duty cycle is low, the current flow to the solenoid is low. This allows spring pressure to close the valve. Therefore maximum line pressure is achieved. As the duty cycle increases, the current flow also increases. The valve opening increases, which allows pressure to be released through the pressure discharge which in turn decreases line pressure.

Main line pressure is also increased during fail-safe operation and when needed during "Adaptive Hydraulic Pressure Control" functions. Mainline pressure will also default to maximum pressure when power to the TCM is switched off.

G03403811

Fig. 33: Identifying Pressure Regulation
Courtesy of BMW OF NORTH AMERICA, INC.

BMW EH transmissions have selectable shift programs (or modes) to suit driver needs and operating conditions. There are 3 basic shift programs available:

- **Economy Program** - The economy program is the default program which is adopted every time the vehicle is started. When in economy mode, the operating priority is for maximum economy and shift comfort. Shifts will take place at low engine RPM and road speed. The economy mode is indicated by an "A" on the program switch. The cluster will display an "E" to indicate economy mode.
- **Manual Mode (Winter Mode)** - Manual mode is used to start out the vehicle in a higher gear on slippery surfaces when more traction is needed. A higher gear will reduce torque to the rear wheels. Manual mode can also be used to select a lower gear when needed such as when climbing a hill. Depending upon vehicle application an "M" will appear in the cluster when in Manual Mode or an asterisk (*) symbol will appear in the instrument cluster to indicate Winter Mode.
- **Sport Mode** - Sport Mode provides raised shift points and a more aggressive shift program for the "Enthusiastic" BMW driver. The cluster will display an "S" when in sport mode.

Regardless of vehicle application, the program switch provides a momentary ground to the TCM to switch between modes. There have been numerous designs of the program switch since its introduction. The program switch configurations are as follows:

- **2 Position Slide Switch** - This switch has the "A" and the "M" selection. Sport mode is achieved by moving the selector lever from "D" to 4, 3 or 2 when in the Economy Mode. The 2 Position slide switch is used on most models. These vehicles usually have a range and program display located in the instrument cluster.
- **2 Position Rocker Switch** - This switch operates the same as the slide switch, but it is used exclusively on the E36. The E36 does not have a program indicator in the cluster. The rocker switch will illuminate, indicating the current program.
- **3 Position Slide Switch** - This switch has the added position for sport mode. The shifter does not have to be moved out of drive (D) to be in sport mode. This switch is used on the E36 M3 and the 4HP22/24 EH (Version Late E-7).
- **3 Position Rotary Switch** - This switch is used only on the Early 4HP22 EH transmissions (Version Early E-7).
- **No Program Switch** - On some vehicles with AGS features, there is no program switch. Shift modes are obtained by moving the shift lever out of "D" range or automatically by adaptive shift functions. (Example E39)

Steptronic Shift Modes

The Steptronic shifting system was introduced to the BMW model line on the 95 E31 850Ci (from 10/94). Steptronic was subsequently added to other BMW models and is available on all BMW models with automatic transmissions. Other than a few additional components in the shifter mechanism, Steptronic equipped vehicles use the same transmission and TCM as non-Steptronic equipped vehicles.

Since the introduction of Steptronic, there have been several variations in Steptronic function. Regardless of version, the Steptronic system provides the driver with two modes of operation:

- To operate the transmission in fully automatic mode as with a non-Steptronic transmission.
- To operate the transmission in the manual shift mode by tilting the shift lever forward or backward when in the manual gate.

The Steptronic shift lever console contains an automatic and a manual shift gate. The automatic gate contains the gear lever positions P/R/N/D. When the lever is placed in "D" all of the shifting takes place based on the shift map programming in the TCM. To enter the manual gate the shift lever is moved 15 degrees to the left.

Depending upon application, there are three possible configurations of the manual gate:

- On the E31 850Ci, the gate is marked as "M" only. There is a plus and minus sign for manual shifting. Upshifts are achieved by momentarily moving the shifter forward. Downshifts are achieved by moving the shifter rearward. When placing the shifter into the "M" gate, the transmission will adopt the current gear that is engaged. The transmission will stay in that gear until an upshift or down shift request is made.
- On all other vehicles until the 2002 model year, the gate is marked M/S. There is also a plus and minus sign for manual shifting. When placing the shifter into the M/S gate, the transmission will adopt Sport mode. All shifts will still be automatic. Full manual mode is achieved when an upshift or downshift request is made. Upshifts are achieved by moving the shifter forward momentarily and downshifts are achieved by moving the shifter rearward.
- On all models with Steptronic from 2002, the only change is to the manual shifting modes. In order to be consistent with SMG operation, the positions were reversed. Upshifts are now achieved by moving the shifter rearward and downshifts are now forward. Otherwise, Steptronic operation is identical to the previous models.

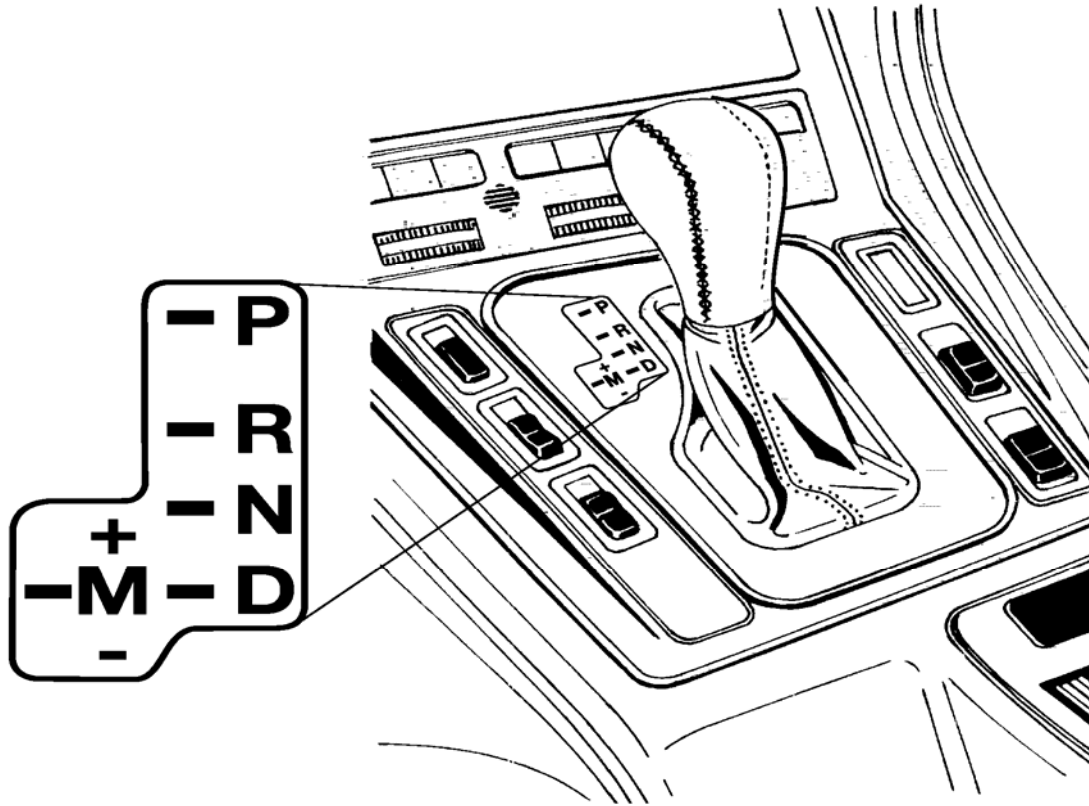

Automatic Functions In Manual Mode

When in manual mode there are certain functions which occur automatically to prevent drivetrain damage and improve driveability:

- **Engine Overspeed Prevention:** To prevent engine over-rev, the TCM will upshift automatically just prior to max engine cutoff.
- **Kickdown:** If plausible, the TCM will automatically shift down to the next lower when a kickdown request is received.
- **Decelerating:** If in 5th gear and coasting to a stop, the TCM will automatically down shift to 4th gear at approximately 31 mph and then 3rd gear at approximately 19 mph. The automatic downshift allows for an acceptable gear when re-accelerating. (6 cylinder models will shift to 2nd gear when stopping vehicle)
- **Implausible Gear Requests:** Certain shift requests are ignored by the TCM. For example, requesting a downshift at a high rate of speed would be ignored. Any shift request that would cause the engine to exceed the maximum RPM limit would not be allowed. Also starting out in a high gear is also not allowed. Only 1st, 2nd or third gear is allowed when accelerating from a stop.

E31 850Ci Shifter Console

1995 to 1997 Model Year.

G03403815

Fig. 37: Identifying E31 850Ci Shifter Console
Courtesy of BMW OF NORTH AMERICA, INC.

Steptronic Shifter Circuit

In order to achieve manual shifts with Steptronic, the selector lever is moved 15 degrees to the left. A pin on the selector lever engages the "up/down" microswitches which are a ground input to the TCM. The selector lever also triggers the "M" gate microswitch which is also a ground input to the TCM.

Fig. 38: Identifying Steptronic Shifter Circuit
 Courtesy of BMW OF NORTH AMERICA, INC.

The example on the right shows a typical shift console for an E31. Note the shift pattern, upshifts are forward and downshifts are rearward. This shift pattern was used on vehicles up to the end of 2001 production. On vehicles from 2002 production, the shift pattern is reversed.

ADAPTIVE FEATURES (AGS)

AGS features were introduced in 1994 with the A5S560Z transmission. AGS control consists of adaptive features that will modify transmission operation according to various factors. AGS operation can be influenced by two major functional groups:

- Driver influenced features (influenced by throttle and kickdown input)
- Environmental influences (such as road conditions - icy, traffic etc.)

--EGS-- CONDITIONS THAT INFLUENCE SHIFT PROGRAM

--AGS-- ADDITIONAL CONDITIONS THAT INFLUENCE SHIFT PROGRAM

G03403820

Fig. 42: Identifying Adaptive Features (AGS)
 Courtesy of BMW OF NORTH AMERICA, INC.

The driving program selection is not adapted on a long term basis - nor is it stored in the control module memory when the ignition is switched off. It continually changes as the driver of the vehicle changes driving habits.

Driver Influenced Features Of AGS

The adaptive drive program is based primarily on throttle input. The throttle information comes from the ECM (DME) via the CAN bus. The TCM continuously monitors the throttle input for:

- The current throttle position
- The rate of change in pedal movement
- The number of acceleration requests
- The number of kickdown requests

Drive Away Evaluation

The AGS system selects the appropriate shift program based on the amount of acceleration that occurs during takeoff. When driving away under full throttle the transmission will shift from XE to E.

Kick Fast Feature

Based on these inputs, the AGS will select one three different driving programs as follows:

- Extreme Economy - Shift points are a low speeds for maximum comfort and economy
- Economy - The shift points are raised for more performance with economy as priority
- Sport - The shift points are higher to take advantage of full engine performance.

Under full throttle acceleration at high speed, single gear downshifts are possible. A two gear downshift is possible if the accelerator pedal is moved quickly to kick-down. The Extreme Sport program was eliminated as part of the kick-fast feature.

G03403821

Fig. 43: Identifying Kick Fast Feature
Courtesy of BMW OF NORTH AMERICA, INC.

Environmentally Influenced AGS Features

Fig. 44: Identifying Environmentally Influenced AGS Features
 Courtesy of BMW OF NORTH AMERICA, INC.

STOP And GO

The feature is activated by defined sequence of shifts which are as follows:

- Upshift from first to second - followed by a downshift from second to first - followed by another upshift from first to second. This is then followed by the vehicle coming to a complete stop.

After this sequence occurs, the transmission will stay in second gear. The AGS control has recognized stop and go driving and this function will prevent excessive shifting during heavy conditions. The second gear start will be cancelled when:

- The vehicle speed exceeds 40 MPH
- The throttle pedal is pressed more than 90%
- The range selector is moved to Park, Neutral, Reverse or Sport (4, 3 or 2)
- The vehicle is in Sport Mode

Winter Drive Program

This feature is activated when the TCM detects slippage at the rear wheels by comparing front and rear wheel speed signals. When slippage is detected by the TCM, the transmission will start in second gear and the shift points will be lowered. This will reduce torque to the rear wheels allowing improved driveability and traction on slippery roads.

Hill Recognition Program

There are two hill recognition programs, one for Uphill and one for Downhill. The TCM will activate this feature when it receives a high engine load signal at slower road speeds. The TCM will perceive this information as being consistent with climbing a hill. The shift points will be raised to prevent constant up and down shifting. This is referred to as the pendulum shift effect. When driving downhill, road speed will increase with minimal throttle input. The TCM will detect a downhill situation and hold the current gear to prevent an upshift when going downhill.

Curve Recognition

This feature will inhibit upshifts when the vehicle is in a curve. This is to improve stability when the vehicle is cornering at high speeds. The TCM will initiate this feature when it detects a difference between left and right (front) wheel speed signals. The difference in these signals will indicate that the vehicle is in a curve. Be aware that improper tire sizes, brands and inflation pressures can influence this feature. Always address these issues first when diagnosing delayed upshift complaints.

Cruise Control Drive program

A special cruise control shift map is selected by the TCM when cruise control is active. The TCM will prevent unwanted locking and unlocking of the torque converter clutch. Also, upshifting and downshifting will be minimized. Depending upon application, the cruise control interfaces with TCM via a single wire data link or as on vehicles with electronic throttle control, the TCM will interface with the ECM (DME).

Manually Selected "Extreme Sport" Program

This feature is activated by moving the shift lever to position 4, 3 or 2. This activates the "Extreme Sport Program" where the shift points are raised for maximum RPM and performance. On Steptronic equipped vehicles, the sport program is obtained by moving the shifter to the manual gate to initiate the "Sport Program".

Modifications To AGS Features

Since the introduction of AGS features in 1994, there have been some software changes to address customer concerns. Some AGS features have been perceived by the customer as malfunctions. To correct this, some of the AGS features were modified with updated software. The AGS features previously discussed in this text reflect the updated modifications.

CAN BUS COMMUNICATION

The CAN bus is a serial communications bus in which all connected control units can send as well as receive information. Data over the CAN bus operates at a rate of up to 1Mb/s (megabits per second).

The CAN protocol was developed by Intel and Bosch in 1988 for use in the automotive industry to provide a standardized, reliable and cost-effective communications bus to combat the increasing size of wiring harnesses.

The CAN bus was originally introduced on BMW automobiles in the 1993 E32 740i/IL as a data link between the TCM (EGS) and the ECM (DME).

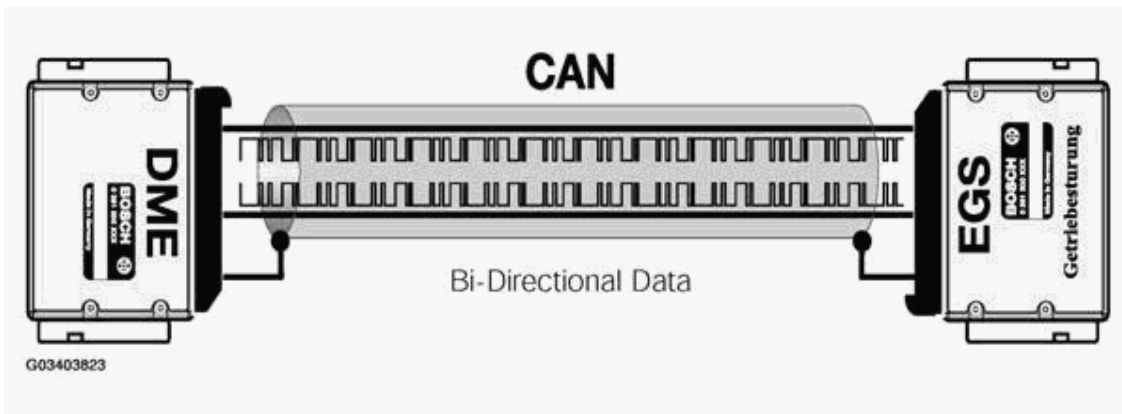

Fig. 45: Identifying CAN Bus

Courtesy of BMW OF NORTH AMERICA, INC.

On earlier EGS systems, various signals were transmitted on individual signal wires. This reduced reliability and increased the amount of wiring needed. The CAN bus allows faster signal transmission and increased versatility. For example, the signals listed in the chart below were previously transmitted on individual wires, now these signals are all on the CAN bus. This chart represents only some of the signals on the CAN bus, there are many more signals transmitted between the TCM and ECM.

EGS SYSTEMS SIGNALS

Sender	Information Item	Receiver	Signal Use
ECM	Engine Temperature	TCM	Shift Point Calculation
ECM	Engine Load (tL)	TCM	Shift Point Calculation
ECM	Engine RPM (TD)	TCM	TCC Slippage
ECM	Throttle Position (DKV)	TCM	Shift Point Calculation
ECM	A/C Compressor ON	TCM	Fine tune shift points to compensate for increased engine load.
TCM	Transmission Range	ECM	Engine Idle Speed Control
TCM	Torque Reduction Signal (ME)	ECM	Timing Retard during shifts.
TCM	TCC Lockup Status	ECM	Engine Timing Map adjustment.

CAN Bus Topology

The CAN bus consists of two twisted copper wires. Each wire contains an opposing signal with the exact same information (CAN-High, CAN-Low). The opposing signals transmitted through the twisted wire serve to suppress any electrical interference. Early CAN bus wiring included a grounded shield around the two wires, later vehicles discarded the shield in favor of the unshielded twisted pair wiring.

Due to the linear structure of the network, the CAN bus is available for other modules in the event of a disconnected or failed control unit. This is referred to as a "Tree" structure with each control unit occupying a branch.

Fig. 46: Identifying CAN Bus Topology
 Courtesy of BMW OF NORTH AMERICA, INC.

As previously mentioned, the CAN bus initially was used as a high speed communication link between the DME and AGS control units.

With the introduction of the E38 750iL (95 M.Y.), the CAN bus was expanded to include the EML and DSC control modules. The 750iL made exclusive use of the "star coupler" to link the individual CAN bus ends to a common connector.

The 1998 model year introduced new users of the CAN bus. The instrument cluster and the steering angle sensor were linked to expand the signal sharing capabilities of the vehicle.

The 1999 750iL was the last vehicle to use the shielded cable, after which the entire CAN bus went to twisted pair wiring.

Fig. 47: Identifying CAN Bus Signal Sharing Capabilities
 Courtesy of BMW OF NORTH AMERICA, INC.

On most current models the CAN bus provides data exchange between the following control modules:

- ECM (DME)
- EML (750iL E38)
- TCM (EGS)
- IKE/Kombi
- ASC/DSC
- LEW

On models that use twisted pair, the wire color of the CAN bus is uniform throughout the vehicle with: CAN-Low GE/BR and CAN-High GE/SW or GE/RT. Shielded wiring is easily identified by the black sheath surrounding the CAN bus.

Troubleshooting The CAN Bus

The failure of communication on the CAN bus can be caused by several sources:

- Failure of the CAN bus cables.
- Failure of one of the control units attached to the CAN.

- Failure of the voltage supply or ground to individual modules.
- Interference in the CAN bus cables.

Failure of the CAN bus cables

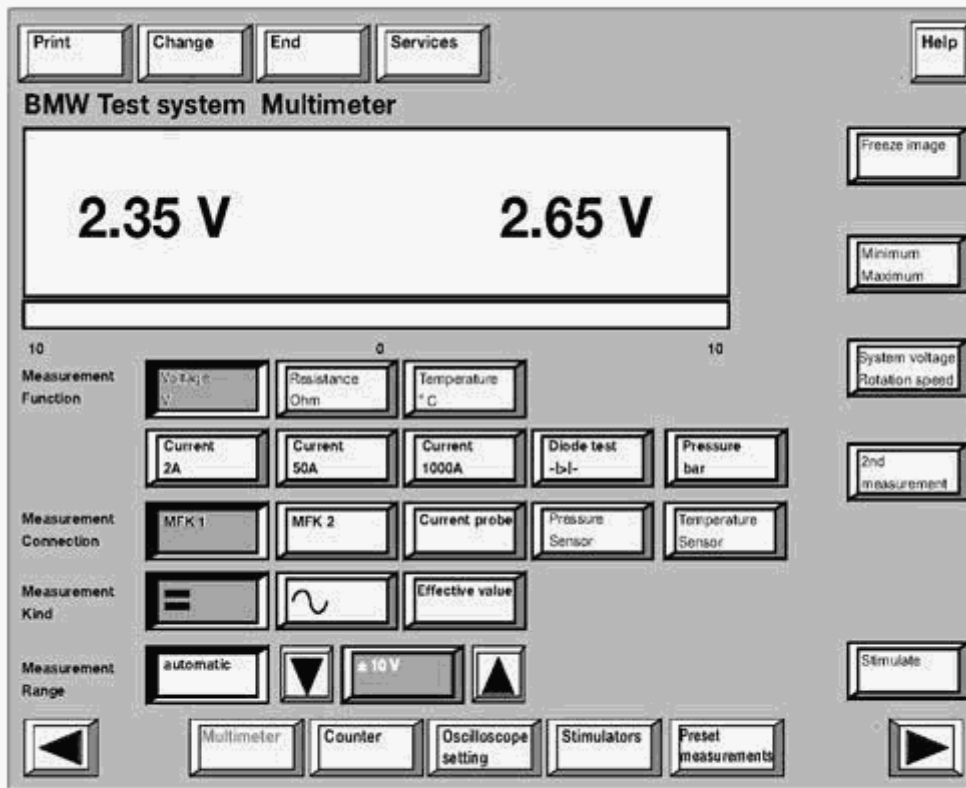

The following faults can occur to the CAN bus wiring:

- CAN-H/L interrupted
- CAN-H/L shorted to battery voltage
- CAN-H/L shorted to ground
- CAN-H shorted to CAN-L
- Defective plug connections (damaged, corroded, or improperly crimped)

In each instance, the connected control units will store a fault due to the lack of information received over the CAN bus.

The voltage of the CAN bus is divided between the two data lines: CAN-High and CAN-Low for an average of 2.5V per line. The voltage measurement is taken from each data line to ground. Each module on the CAN contributes to this voltage.

The fact that 2.5V are present does not mean that the CAN bus is fault free, it just means that the voltage level is sufficient to support communication.

G03403826

Fig. 48: Identifying BMW Test System Multimeter Display
 Courtesy of BMW OF NORTH AMERICA, INC.

Terminal Resistors: are used in the CAN bus circuit to establish the correct impedance to ensure fault free communication. A 120 Ohm resistor is installed in two control units of the CAN between CAN-H and CAN-L. Because the CAN is a parallel circuit, the effective resistance of the complete circuit is 60 Ohms. On some vehicles there is a jumper wire that connects the two parallel branches together, others have an internal connection at the instrument cluster.

The resistance is measured by connecting the appropriate adapter to any of the modules on the CAN and measuring the resistance between CAN-L and CAN-H. The resistance should be 60 Ohms. The CAN bus is very stable and can continue to communicate if the resistance on the CAN bus is not completely correct; however, sporadic communication faults will occur.

The terminal resistors are located in the ASC/DSC control unit and either the instrument cluster or in the DME.

Early 750iL vehicles that used the star connector have a separate external resistor which connect CAN-H and CAN-L together.

Modules which do not have the terminal resistor can be checked by disconnecting the module and checking the

resistance directly between the pins for CANH and CAN-L. The value at these control units should be between 10 kOhms and 50 kOhms.

G03403827

Fig. 49: Identifying Terminal Resistor Circuit
Courtesy of BMW OF NORTH AMERICA, INC.

DIAGNOSIS AND TROUBLESHOOTING

Due to the cost and complexity of today's electronic transmissions, BMW recommends that the technical hotline be contacted before any repairs are performed. It is important that the technician perform some basic diagnostic procedures before contacting technical assistance. The following procedures should be followed:

- Always Verify customer complaint, make sure the complaint is not related to normal operation. (i.e. Warm Up Phase, AGS operation etc.)
- Survey Fault Memory - Perform **complete** quick test. There may be other systems that interface with EGS that could cause faults. (i.e DME, ASC/DSC, IKE/Kombi etc.)
- Print out all fault code with fault conditions. Also print out copy of Identification page and diagnostic report.
- CHECK TO SEE IF THERE ARE ANY SERVICE BULLETINS THAT APPLY TO YOUR SPECIFIC COMPLAINT. THIS INCLUDES THE SERVICE ROUND TABLE.
- Ensure that battery voltage is sufficient. Battery voltage must be greater than 12.5 with ignition switched off. Check battery connections for tightness and condition.
- Check ground connections. (chassis to engine, grounds to bulkhead and shock tower.)
- Check over vehicle to look for transmission leaks, physical damage, loose connections etc.
- If necessary, check fluid level and condition using DISplus or GT-1.
- Check to see if any aftermarket or performance components have been installed that could effect transmission operation. (DME or EGS software as well as any engine modifications).
- Check repair history to see if there were any recent repairs that could effect the proper operation of the transmission (i.e. Engine replacement with damaged dowel pin etc.).
- Check DCS for any open campaigns or recalls pertaining to drivetrain.
- Check and record chassis number, production date and transmission serial # before contacting technical assistance.

Establishing A Diagnostic Plan

Once all of the pre-diagnostic criteria has been satisfied, a logical diagnostic plan should be followed. A logical, well organized diagnostic plan will help avoid improper diagnosis, unnecessary parts replacement and lost diagnostic time. A technician's goal should be to satisfy the customer by "Fixing it the first time, on time, every time". The productivity of the technician can also be improved by following a logical, common-sense approach to problem solving. The following steps are recommended to form a diagnostic plan:

- **Verify the Customer Complaint** - This step is the most important, but also the most overlooked. The focus should always be on the exact customer concern. Make sure that the customer complaint is not a misunderstanding of proper vehicle operation. This step can avoid unnecessary diagnosis and lost time. If the customer concern is not exactly identified, any subsequent repairs can not be verified as being effective. This is the most common cause of "comeback" repairs. Communication between the customer to advisor and the advisor to technician must be clear. Vague or misunderstood customer complaints are often improperly diagnosed. Also make sure that the conditions under which the concern has occurred are duplicated. For example: If the customer is complaining about a shifting concern after a cold start, then the vehicle should be road tested under those conditions.
- **Analyze the Problem** - Once the complaint has been verified, then all available resources should be used

to find the "root cause" of the complaint. Start out by checking Service Information Bulletins, DCS messages, and Service Round table information. Use the DISplus or GT-1 to access the diagnostic program and perform Diagnostic Test Modules where applicable. Electrical Troubleshooting Manuals (ETM's) should also be used when needed.

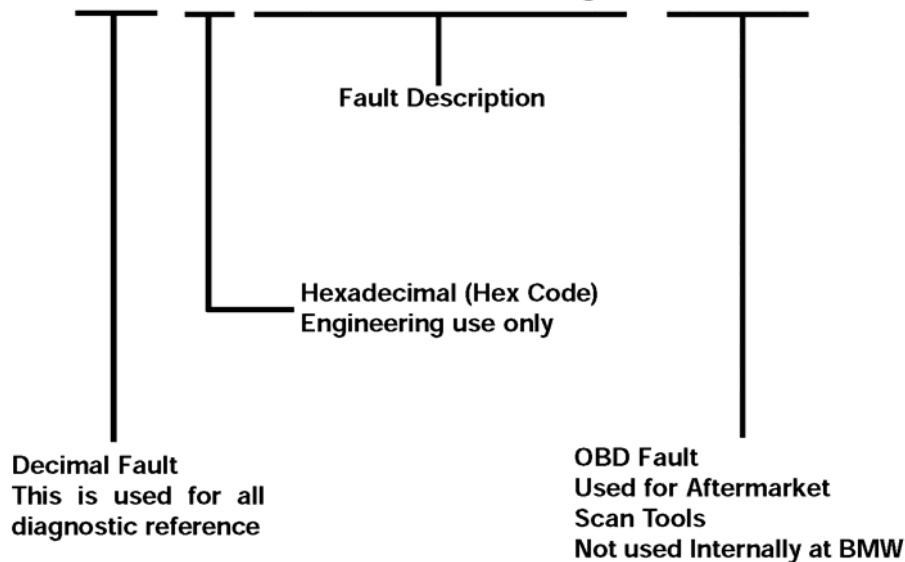

- **Isolate the Problem** - Now, the problem can be narrowed down into the final steps of diagnosis. Using proper tools and procedures, the technician can "Isolate" by using the process of elimination and common sense. Having a working knowledge of BMW systems is helpful in this area. When applicable, use all available BMW special tools and equipment. Perform all necessary electrical checks such as Voltage Drop, resistance measurements etc.
- **Repair the Problem** - Once the concern has been correctly identified, perform all necessary repairs as per BMW guidelines. Make sure all repairs are properly documented to comply with warranty policies and procedures.
- **Verify the Repair** - Make sure the customer concern has been rectified. Road test the vehicle under the same conditions whenever possible. Failure to complete this step properly is almost a guaranteed comeback. Repeat repair attempts are costly to the BMW Center and the BMW Service Technician.

REMEMBER - Fix it the first time, On Time, Every time.

Fault Codes

When diagnosing transmission fault codes, always print out the fault code(s) and the fault conditions. When referring to the fault code itself, be aware that there are actually 3 formats for the fault code. The fault code breakdown is as follows:

Fault Code (050) 32 Gear Monitoring 1 (P0731)

G03403828

Fig. 50: Identifying Fault Codes
Courtesy of BMW OF NORTH AMERICA, INC.

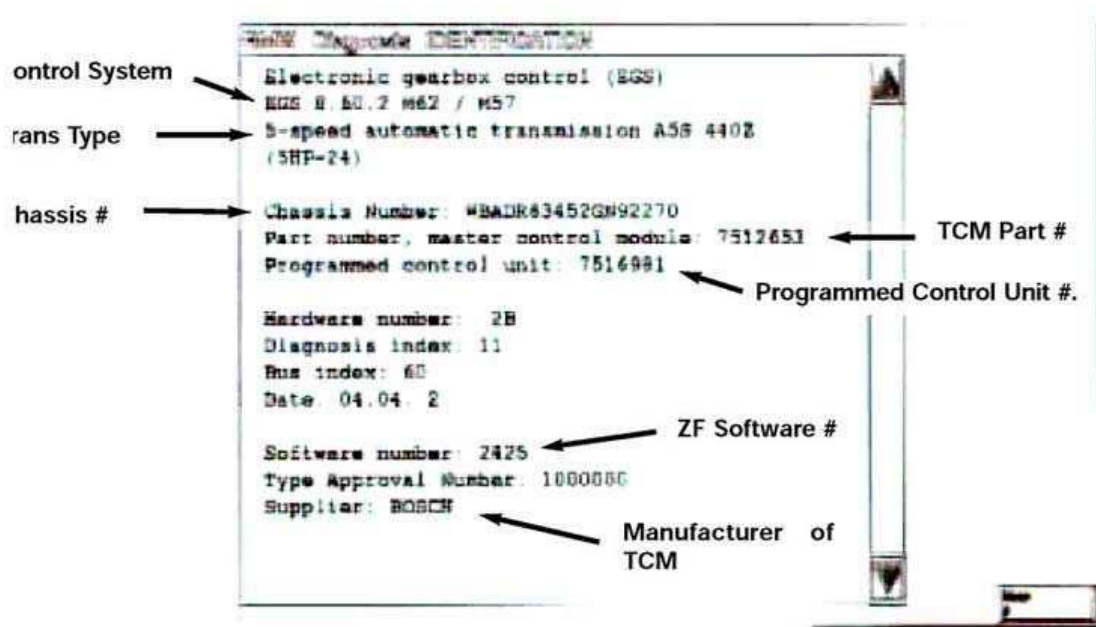

When referring to the "Fault Code" during diagnosis always use the fault that is in Decimal Format. The Decimal fault is referred to in all reference material such as Service Information Bulletins, Test Modules and DCS messages etc. In the example above, FC 050 would be the correct choice.

Fault Conditions

When a fault code is set, it is stored with a set of environmental conditions. The environmental conditions are used to aid in pinpointing the root cause of the fault. Some of the information found in the fault conditions contain information on transmission temperature, engine speed and road speed etc. This information is also helpful when trying to duplicate the customer complaint. For example, if a customer complains about a shifting complaint when cold, check the fault conditions to verify this complaint. Remember to always print out the fault codes with the fault conditions. This information is helpful to the technician as well as technical assistance.

Identification Page

The ID page is helpful to determine the Transmission and control system used as well as the chassis number and current software version. Always print out a copy of the ID page when performing any diagnosis or programming procedures.

G03403829

Fig. 51: Identifying Identification Page
Courtesy of BMW OF NORTH AMERICA, INC.

Diagnosis Program

There are two diagnostic formats (programs) used on current model BMW vehicles. The earlier diagnostic program was used on the E38 and E39. The latter diagnostic program was introduced as the "E46 Diagnostic Concept". This is used on the E46, E65 and the E52 (Z8). The E53 X5 uses a mixture of both diagnostic programs depending upon engine/transmission options. Below is an example of the earlier diagnostic program.

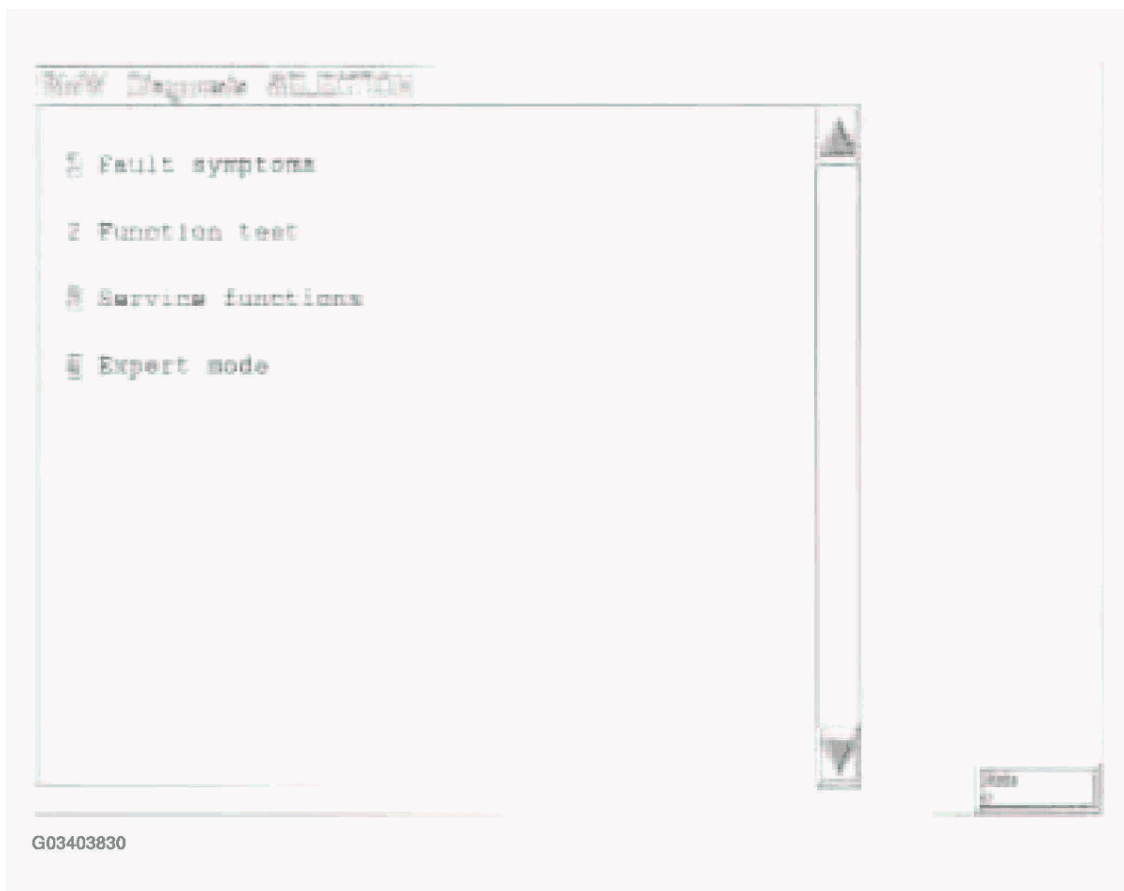

Fig. 52: Identifying Diagnosis Program

Courtesy of BMW OF NORTH AMERICA, INC.

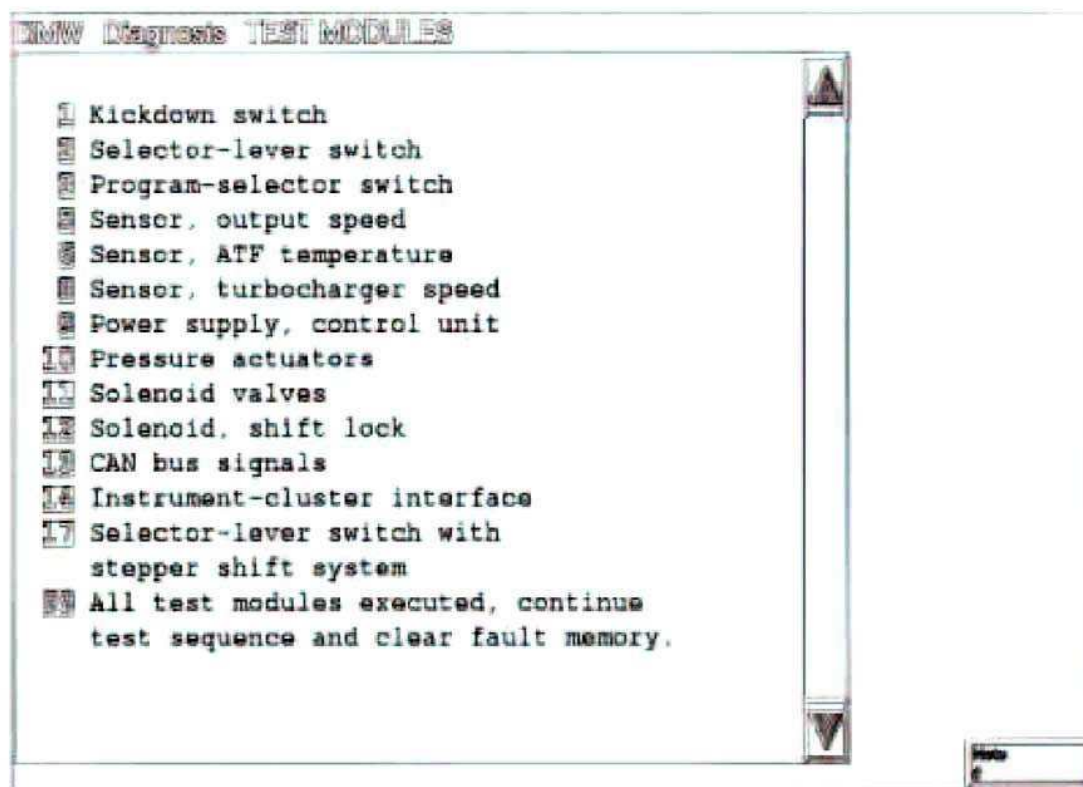

The diagnostic program contains the following features:

- **Fault Symptoms** - This is a symptom driven program that will lead the technician into guided diagnostics. It contains several possible fault scenarios that are common to electronic transmissions. This path is helpful when the technician is not sure where to start in his diagnostic plan.
- **Function Test** - There are no function tests for electronic transmissions.
- **Service Functions** - This is where you will find the ATF level check function. Also Test Codes can be obtained and printed out for warranty purposes. The Adaptation values can be cleared as well as printed out.
- **Expert Mode** - Expert Mode should be used when the technician has a thorough working knowledge of the system. You will find several items in expert mode: Read/Clear fault memory, Diagnosis (Status) requests, Component Activation and Test Modules.

Test Modules

Test modules are found in the diagnosis program of the DISplus and GT-1. These allow the technician to take advantage of a guided diagnostic plan. The program will direct the technician through the various steps using a "trouble tree" format. When using test modules it is important to follow the instructions exactly. Due to the complex nature of some faults, the test modules are not always conclusive. The test module is only as effective

as the information provided by the technician. The technician also needs to rely on his experience and some common sense. The test modules should be used to assist the technician, not as a replacement for good diagnostic skills.

G03403831

Fig. 53: Identifying Test Modules
Courtesy of BMW OF NORTH AMERICA, INC.

Test modules come in two formats. The one shown above is used on E38/E39 vehicles and the E53 with 4.4 and 4.6 engines. The E46, E65 and E53 (with 3.0 M54) uses the new "E46 Diagnostic Concept" which was introduced with the E46 in the 1999 model year. Regardless of the format used, the technician is still guided through a step by step procedure.

Diagnostic Tips

The following consists of some helpful hints to assist the BMW diagnostic technician. It is designed to assist the technician to form a logical path of diagnosis. These suggestions should be used in conjunction with other approved diagnostic routines. This does not exclude the technician from the responsibility to contact technical assistance. All major repairs and transmission replacement must be pre-approved by the BMW Technical Hotline. Transmission concerns can be broken down into several categories:

- **Shift Quality Complaints** - Shift Quality complaints consist of harsh up or down shifts, improper shift points and erratic shifting. These complaints could be related to electronic/software issues or hydraulic/mechanical problems. Perform quick test and check SIB's before proceeding. As with most

concerns, check the transmission fluid level and condition as well.

Do not clear adaptation values unless instructed to do so by BMW Technical Hotline.

- **Delayed/No Upshifts** - Before proceeding on delayed upshift complaints, make sure you are aware of the conditions that this occurs. This could be normal operation, such as the "Warm-up Phase" program. Always check front tires for proper inflation pressures, correct size and type. Also check for uneven tire wear. Variations in front tire size from left to right can activate the AGS "Curve Recognition" feature. The TCM will interpret the difference in wheel speed signals as being a turn and suppress (or delay) upshifts.
- **Slipping** - This type of issue is usually associated with a fault code. Be sure to check the transmission fluid level and condition.
- **Noise, Vibration** - Noises and vibrations should be checked over by a good visual inspection. Look for loose transmission or engine mounts. Check the driveshaft, center bearing and flexible coupling (or constant velocity joints). Also check the lateral alignment of the driveshaft. There are several SIB's pertaining to noise and vibration.
- **No Forward or Reverse Gear** - Start by checking transmission fluid level and note the fluid condition. Inspect for leaks and external transmission damage.
- **Leaks** - When investigation transmission leaks, be sure to verify that the suspected leak is actually transmission fluid. Engine oil, hydraulic and brake fluid can be mistaken for a transmission leak. Check the transmission cooler lines, transmission cooler and transmission pan gasket. Try to locate the source of the leak. Do not make any major repairs until the technical hotline is contacted.
- **Fault Codes** - Perform COMPLETE short test (Quick test) on all vehicle systems. It is important to survey all systems in the event that a related system is causing the transmission fault. Always print out the ID Page, Fault codes and fault conditions.

Information Resources

When diagnosing transmission related concerns it is important to use all information resources available. The following information sources should be utilized at all times:

- Service Information Bulletins
- Technical Data
- ETM Electrical Troubleshooting Manual
- DCS (Dealer Communication System)
- Repair Instructions
- Tightening Torques
- Technical Training Manuals
- Special Tool Information

Technical Information System (TIS)

Most of the above information can be accessed by using the BMW TIS CD or by logging on the BMW TIS website through **www.bmwcenternet.com**. The BMW TIS website contains a wealth of helpful information for the technician. The information is updated on a regular basis.

Service Round Table

In addition to the above sources of information, the technician should be up to date on the latest edition of the BMW Service Round table. The round table will cover the most recent topics and offer some hints that will assist the technician. The Service Round table is broadcast live on a monthly basis via the BMW Visionwerke Network. In addition to live broadcasts, the round table is rebroadcast on a regular schedule during the month.

TCM CODING AND PROGRAMMING

As with other control modules used on BMW systems, the TCM must be programmed and/or coded for the vehicle. Over the years, these methods have varied from system to system.

Coding

Coding will assign the control unit to a particular application. Information such as differential ratio, tire size, vehicle series, engine, engine control system, w/wo AC etc. are some of the possible variants that have to be considered. Transmission control units are coded using various methods.

- **Grounding pins in wiring harness connector** - On early models equipped with the 4HP22/24 EH transmissions, the TCM was coded to the vehicle by means of grounding pins in the wiring harness connector for the TCM. By selectively grounding specific pins in the harness, the TCM was assigned to that vehicle. For Example: The TCM could be installed in a 535, 635, or a 735. This only applies to the Early E- 7 Versions. (E23, E24, E28)
- **TCM ordered for Specific Application** - On some later models, the TCM was ordered for a specific vehicle application, coding was not necessary.
- **Coding performed during programming** - On systems that use a flash programmable TCM, the coding process is done during flash programming.

Programming

Programming refers to the instructions that the TCM is to follow. The TCM is programmed to apply certain shift maps according to operating conditions such as vehicle speed, engine speed, engine temperature, engine load and throttle position. This information can be entered into the TCM via an updated EPROM or through flash programming.

Flash programmable control units use a EEPROM which is Electronically Erasable. The EEPROM is also soldered into the TCM and cannot be removed or replaced. Flash programmable TCM's can be programmed up to 14 times (with a new TCM).

NOTE: Always clear adaptations after programming.

NOTE: Do not program a TCM to correct a complaint unless there is a specific SIB that covers the issue. Only program when installing a new TCM or when instructed to do so by BMW Technical Assistance. Always have the ID page available when calling for technical assistance.

TCM PROGRAMMING

Control System	Transmission	Coding	Programming	TCM Type
GS 1.26 GS 1.27 GS 1.29	4HP22 EH (Early E-7) 4HP22/24 EH (Late E-7 and E-9)	Grounding pins in Harness. (Early E-7 Only) TCM ordered for specific application. Coding not needed.	Replaceable EPROM Replaceable EPROM	35 Pin 35 Pin
GS 7.3 GS 7.32 GS 7.11 GS 8.32	A5S310Z (5HP18)	TCM ordered for specific application. Coding not needed.	Replaceable EPROM	88 Pin
GS 8.60 GS 8.60.4	A5S325Z (5HP19)	Coding done when Programmed	Flash Programming (EEPROM)	134 Pin SKE
GS 8.55 GS 8.60.2	A5S440Z (5HP24)	Coding done when programmed	Flash Programming (EEPROM)	88 Pin up to 98 (E38 M62) 134 Pin SKE from 98 to present.

GS 20	A5S360R A5S390R	Coding done when programmed	Flash Programming (EEPROM)	134 Pin SKE

TRANSMISSION FLUID INFORMATION

Transmission Fluid (Oil)

The automatic transmission provides filtered, pressure regulated hydraulic fluid for all of the transmissions functional requirements. All BMW automatic transmissions are designed to operate with specific fluids. Use of non-approved oil will cause malfunctions and irreparable transmission damage which is not covered by BMW warranty.

The transmission fluid provides the following functions:

- Lubricates mechanical components (planetary gears, bearings etc.).
- Removes heat and transfers heat to transmission cooling system. (Heat Exchanger).
- Removes debris and contaminants to sump and filter when circulated.
- Provides a transfer of kinetic energy in the torque converter.

- Allows hydraulic operation of mechanical components (clutches, brakes) via control of the valve body.

Also, transmission fluid has various properties to prevent oxidation and breakdown from heat and friction. Each type of transmission fluid has properties specific for each transmission application.

Fluid level is crucial in the proper operation of an automatic transmission. Improper fluid levels will cause improper operation and eventually irreparable transmission damage. Improper fluid level can cause:

- A low fluid level can cause an interruption in oil flow during fast acceleration or hard braking which can cause gear shift malfunctions and noises.
- An excessively high fluid level can cause the rotating mechanical components to paddle in the oil. This produces foam which introduces air into the hydraulic system.
- A low fluid level can also cause transmission overheating causing premature transmission failure.

Fig. 54: Identifying Transmission Fluid Flow
 Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Fluid Checking Procedures

Transmission fluid checking is accomplished using the DISplus or GT-1. The DISplus or GT-1 is used to monitor transmission fluid temperature to insure the transmission is not over or under-filled. As with most other current ZF transmissions there is no dipstick, the fluid level is checked and filled at the fill plug. The location of the fill plug varies between transmissions.

Transmission fluid should be checked between 30 and 50 degrees Celsius (unless otherwise specified). Use the DISplus and/or GT-1 to determine transmission temperature. The transmission temperature information can be found in the diagnosis section under Service Functions.

Proper procedures for checking and filling transmission fluid can be found in BMW Service Information Bulletin B 24 01 98.

When checking transmission fluid, observe the following items:

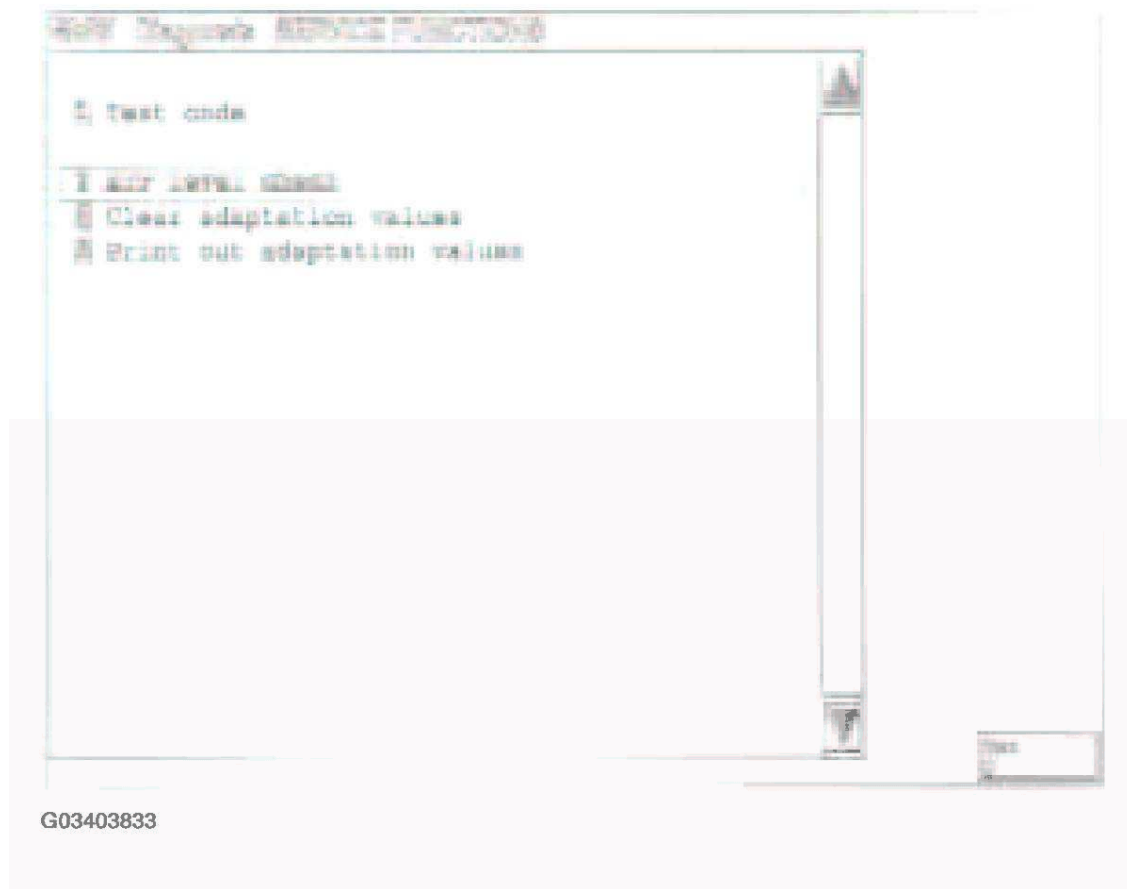

Fig. 55: Identifying Transmission Fluid Checking Procedures
Courtesy of BMW OF NORTH AMERICA, INC.

- Transmission in Park
- Parking brake applied
- Engine Running
- Vehicle level
- No engine load
- Trans Temp 30-50C
- Observe correct drain plug torque

- Use correct fluid

When replacing parts on transmissions that use lifetime fluid, drain fluid into a clean container and reuse.

Fig. 56: Identifying Transmissions Drain Plug And Fill Plug
 Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Fluid Application

There are numerous types of transmission fluid used in BMW transmissions. With the exception of the early transmissions (4HP22/24, A4S310/270R and the A5S310Z in the E34) all current BMW transmissions use "Lifetime Fill" transmission fluid. There is no maintenance required for these transmissions. It is important to use the correct fluid. Incorrect use of the transmission fluid can cause non-warrantable transmission damage.

When performing repairs on transmissions with lifetime fluid, it is important to drain the transmission fluid in to a clean container for re-use. New fluid should only be used for transmission replacement and for topping off after repairs.

Also, transmission fluid level is vital to the proper operation of the transmission.

When servicing or repairing BMW automatic transmissions, refer to TIS for fluid capacities.

TRANSMISSION SERVICE

Overview Of Allowable Repairs

Currently, service of transmissions covered under warranty is limited to level I. Level I service includes electrical, minor mechanical and hydraulic repairs as well as repair manual provided service adjustments.

Part availability is limited to include the repair of the following:

- **Oil Leaks** - Radial Seals and gaskets.
- **Mechanical/Hydraulic Faults** - Torque Converter, Valve Body, parking pawl, oil pan, output shaft bearing.
- **Electrical Faults** - Solenoid Valves, pressure regulator valves, wiring harness.
- **Signal Sensing** - Turbine and Output Speed Sensors, CAN bus, Temp Sensor.

G03403835

Fig. 57: Exploded View Of Transmission Parts
 Courtesy of BMW OF NORTH AMERICA, INC.

BMW Technical Hotline

Before performing any major repairs or transmission replacement, always contact the BMW Technical Hotline at 1-800-472-7222. When prompted to do so, select option 1 for the Drivetrain Group. Be prepared with all necessary information such as transmission serial number, ID page, fault codes etc. Failure to contact the technical hotline could result in the non-payment of warranty claims.

BMW Value Line Program

The Value-Line replacement transmission program provides the availability of factory certified rebuilt units at a very competitive cost.

BMW SPECIAL TOOLS (TRANSMISSION)

The following pages contain information about BMW special tools, this is not an all inclusive list. This is a list of tools that would be helpful in the diagnosis and service of BMW transmissions.

Transmission Removal And Installation

Tool # 24 1 110

This tool is used to remove the torque converter to flexplate bolts. It is a 17 mm socket with 3/8" drive. There is a magnet to help retain the bolt during installation and removal.

G03403836

Fig. 58: Identifying BMW Special Tools - Tool # 24 1 110
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 4 130

During transmission installation and removal the oil pump must be protected from damage. This tool helps keep the torque converter in place, to prevent oil pump damage due to misalignment.

G03403837

Fig. 59: Identifying BMW Special Tools - Tool # 24 4 130
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 2 300

Used to align torque converter with flexplate during installation. Use on all BMW automatic transmissions.

G03403838

Fig. 60: Identifying BMW Special Tools - Tool # 24 2 300
Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Adjustments

Tool # 24 2 320

3/16" socket head cap screw (hex) with 1/4" drive. Used to adjust brake band on the THMR-1.

Fig. 61: Identifying BMW Special Tools - Tool # 24 2 320
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 2 330

1/2 open end wrench used to turn lock-nut on the brake band servo when adjusting the brake band. Used only on the THMR-1 transmissions.

Fig. 62: Identifying BMW Special Tools - Tool # 24 2 330
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 1 120

Used as guide to lock the range selector switch in "P" when installing. It is used on the A4S270R transmission. Used only for applications which have the selector switch mounted on the transmission case.

G03403841

Fig. 63: Identifying BMW Special Tools - Tool # 24 1 120
Courtesy of BMW OF NORTH AMERICA, INC.

Transmission Diagnostic Tools

Tool # 24 6 000

8-pin test cable used to test the transmission at the "Cannon Plug" located on transmission case. This cable is used for the 4HP22/24 EH. Used in conjunction with 61 1 459.

G03403842

Fig. 64: Identifying Transmission Diagnostic Tools - Tool # 24 6 000
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 6 060

16 pin test cable used to test the transmission at the "Cannon Plug" located on the transmission case. This cable is used for the A5S310Z and A5S560Z. Used in conjunction with 61 1 459.

G03403843

Fig. 65: Identifying Transmission Diagnostic Tools - Tool # 24 6 060
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 6 020

14 pin test cable used to test the transmission at the "Cannon Plug" located on the transmission case. This cable is used on the A5S310Z.

Used in conjunction with 61 1 459.

G03403844

Fig. 66: Identifying Transmission Diagnostic Tools - Tool # 24 6 020
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 6 010

8-pin test cable used to test the transmission at the "Canon Plug" located on transmission case. This cable is used for the A4S270/310R.

Used in conjunction with 61 1 459.

G03403845

Fig. 67: Identifying Transmission Diagnostic Tools - Tool # 24 6 010
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 6 080

16-pin test cable used to test the transmission at the "Canon Plug" located on transmission case. This cable is used for the 6HP26Z.

Used in conjunction with 61 1 459.

G03403846

Fig. 68: Identifying Transmission Diagnostic Tools - Tool # 24 6 080
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 6 070

20-pin test cable used to test the transmission at the "Canon Plug" located on transmission case. This cable is used for the A5S360/390R.

Used in conjunction with 61 1 459.

G03403847

Fig. 69: Identifying Transmission Diagnostic Tools - Tool # 24 6 070
Courtesy of BMW OF NORTH AMERICA, INC.

Service and Repair Tools

Tool # 24 1 170

For loosening and tightening slotted nut on output drive flange. Used on 5HP18 (A5S310Z). Use in conjunction with tool #24 1 220.

G03403848

Fig. 70: Identifying Service And Repair Tools - Tool # 24 1 170
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 4 110

For loosening and tightening slotted nut on output drive flange. Used on 5HP24 and 5HP30. Use in conjunction with tool #24 1 220.

Fig. 71: Identifying Service And Repair Tools - Tool # 24 4 110
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 1 220

Take up support for drive flange. Used when tightening of loosening slotted nut on output drive flange. Used with tool numbers 24 4 170 and 24 4 110.

G03403850

Fig. 72: Identifying Service And Repair Tools - Tool # 24 1 220
Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 2 380

34 mm Socket used to tighten and loosen nut on output drive flange. Used with special tool 23 0 020. For GA6HP26Z transmission.

G03403851

Fig. 73: Identifying Service And Repair Tools - Tool # 24 2 380
 Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 2 310

Set of tools used to re-seal intermediate plate. Used on A4S310R and A4S270R. Tool Set Consists of:

- | | | |
|----|----------|-----------------------------|
| 1. | 24 2 311 | Pressure Plate |
| 2. | 24 2 312 | Spindle with Pressure Plate |
| 3. | 24 2 313 | Guide Pins (2) |
| 4. | 24 2 314 | Slip Bushing |

G03403852

Fig. 74: Identifying Service And Repair Tools - Tool # 24 2 310
 Courtesy of BMW OF NORTH AMERICA, INC.

Tool # 24 1 200

Used to prevent damage to rotary shift shaft seal when fitting new seal on shift shaft. Used on A5S310Z (5HP18).

G03403853

Fig. 75: Identifying Service And Repair Tools - Tool # 24 1 200

TRANSMISSION

Gear Shift - Repair Instructions - X3

11 CENTRE SHIFT MANUAL TRANSMISSION

25 11 000 REMOVING AND INSTALLING SHIFT LEVER

Special tools required:

- 25 1 120 PIN WRENCH

Necessary preliminary tasks:

- Remove complete exhaust system, see 18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM .
- Remove heat shield.
- Remove transmission cross-member, see 22 31 050 REPLACING CROSS-MEMBER FOR TRANSMISSION MOUNTING .

Unfasten screws.

Tightening torque: 6AZ, see 26 11 PROPELLER SHAFT, COMPLETE .

Fig. 1: Screws

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Lower transmission.

IMPORTANT: Risk of damage:
Engine must not rest against bulkhead.

Detach knob with a firm tug.

NOTE: Do not turn knob when detaching as this will shear off the turning lock in the knob.

Installation:

Fit knob on selector lever, align and press on until it snaps noticeably into place.

NOTE: Illustration shows E46.

Fig. 2: Detaching Knob With Firm Tug
Courtesy of BMW OF NORTH AMERICA, INC.

Press installation frame of rubber gaiter (1) together a little and remove rubber gaiter (1) from center console.

Fig. 3: Rubber Gaiter
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Feed rubber gaiter (1) downwards and fit on selector lever (2).

Pull rubber gaiter (1) over selector lever and insert in center console.

Fig. 4: Rubber Gaiter And Selector Lever
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Push rubber gaiter (1) down until groove (2) is fully exposed.

Fig. 5: Pushing Rubber Gaiter Down
Courtesy of BMW OF NORTH AMERICA, INC.

Remove soundproofing (1).

Fig. 6: Soundproofing

Courtesy of BMW OF NORTH AMERICA, INC.

Lever out fixture (1) in direction of arrow.

Remove shims (3).

Pull selector rod (2) in direction of arrow.

Installation:

Grease selector rod pin.

Make sure shims (3) are in correct position.

Fig. 7: Pulling Selector Rod

Courtesy of BMW OF NORTH AMERICA, INC.

Insert special tool 25 1 120 in mounting and turn 90° counterclockwise.

Press mount upwards out of selector arm.

Fig. 8: Inserting Special Tool And Turning Counterclockwise
Courtesy of BMW OF NORTH AMERICA, INC.

Remove rubber gaiter from body cutout and lift out with selector lever.

Fig. 9: Rubber Gaiter And Selector Lever
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Insert rubber gaiter with arrow in direction of travel towards front.

Fig. 10: Inserting Rubber Gaiter
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Grease selector lever ball.

Install selector lever in selector arm.

Align mount:

- Arrows on mount in longitudinal axis of vehicle.
- Retaining lugs of mount, transverse to direction of travel.

Fig. 11: Aligning Mount In Longitudinal Axis Of Vehicle
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Press mount in area of retaining lugs into selector arm until it audibly snaps into place.

Fig. 12: Pressing Mount In Area Of Retaining Lugs Into Selector Arm
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Pull inner rubber gaiter over bowl on selector arm and press outer rubber gaiter into body cutout.

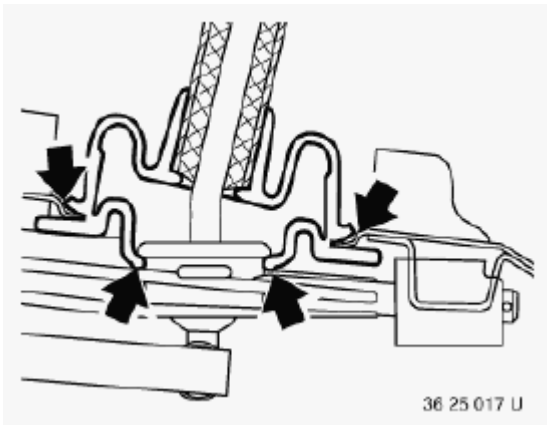

Fig. 13: Pulling Inner Rubber Gaiter Over Bowl On Selector Arm
Courtesy of BMW OF NORTH AMERICA, INC.

25 11 001 REPLACING COMPLETE SHIFT LEVER

Necessary preliminary tasks:

- Remove shift lever, see **25 11 000 Removing and installing shift lever.**
- Remove vibration damper (if fitted).

Detach mount from selector lever.

Installation:

Grease ball joint.

Fig. 14: Detaching Mount From Selector Lever
Courtesy of BMW OF NORTH AMERICA, INC.

Detach rubber gaiter from selector lever.

Fig. 15: Rubber Gaiter And Selector Lever
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Degrease selector lever (1).

Coat rubber bellows on inside of shaped section (2) with Circolight.

Pull rubber gaiter from above over selector lever and align.

Arrow (3) on rubber gaiter must point in direction of travel (A).

Fig. 16: Selector Lever And Shaped Section
 Courtesy of BMW OF NORTH AMERICA, INC.

25 11 041 REPLACING BEARING SHELL FOR SHIFT LEVER

Necessary preliminary tasks:

- Remove shift lever, see **25 11 000 Removing and installing shift lever.**

Detach mount from selector lever.

Installation:

Grease ball joint.

Fig. 17: Detaching Mount From Selector Lever
 Courtesy of BMW OF NORTH AMERICA, INC.

25 11 071 REPLACING KNOB FOR SHIFT LEVER

NOTE: Do not twist knob during removal as this would cause the turning lock in the knob to shear off.

Tug firmly to remove knob.

Installation:

Fit knob on selector lever, align and press on until it snaps noticeably into place.

NOTE: Illustration shows E46.

Fig. 18: Detaching Knob With Firm Tug
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Push rubber gaiter (1) down until groove (2) is fully exposed.

Fig. 19: Pushing Rubber Gaiter Down
Courtesy of BMW OF NORTH AMERICA, INC.

25 11 081 REPLACING GAITER (SHIFT LEVER COVER) FOR SHIFT LEVER

Necessary preliminary tasks:

- Remove knob for shift lever, see 25 11 071 Replacing knob for shift lever.

NOTE: The method for removing the gaiter is the same for manual and automatic transmissions.

Removing gaiter:

1. Carefully pull gaiter taut on leather.
2. Press frame inwards slightly until catch is released.
3. Lift out gaiter.

NOTE: Illustrations show E85.

Fig. 20: Lifting Out Gaiter

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Retaining lugs must not be damaged.

Fig. 21: Retaining Lugs

Courtesy of BMW OF NORTH AMERICA, INC.

25 11 111 REPLACING SHIFT ROD JOINT

Necessary preliminary tasks:

- Remove complete exhaust system, see **18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM** .
- Remove heat shield.
- Remove transfer box, see **27 10 010 REMOVING AND INSTALLING TRANSFER CASE (ATC 400 X-DRIVE)** .

Lift off retainer (1).

Disconnect shift rod (2).

Fig. 22: Lifting Off Retainer

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Grease shift rod.

Make sure shims (3) are in correct position.

Lever spring washer (1) out of groove and push a little towards rear.

Press dowel pin (2) upwards/downwards out of shift rod joint and remove shift rod joint.

Installation:

Grease ball of selector shaft.

Replace spring washer (1).

Fig. 23: Spring Washer And Dowel Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Check rubber ring (1) in shift rod joint (2) and replace if necessary.

Fig. 24: Rubber Ring And Shift Rod Joint
Courtesy of BMW OF NORTH AMERICA, INC.

25 11 211 REPLACING SHIFT ARM FOR SHIFT-LEVER MOUNT

Necessary preliminary tasks:

- Remove shift lever, see **25 11 000 Removing and installing shift lever.**

Unlock bearing pin (1) in direction of arrow and remove.

Pull shift arm forwards out of rubber mount.

Installation:

Grease bearing pin and bearing journal.

Fig. 25: Unlocking Bearing Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Replace bearing bush if damaged, see **25 11 235 Replacing bearing bushes for shift arm.**

Fig. 26: Bearing Bush
Courtesy of BMW OF NORTH AMERICA, INC.

25 11 235 REPLACING BEARING BUSHES FOR SHIFT ARM

Necessary preliminary tasks:

- Remove shift arm, see **25 11 000 Removing and installing shift lever.**

Press out bearing bush (1).

Coat new bearing bush (1) with Circolight and then press into shift arm until side edges of bush protrude uniformly.

Fig. 27: Bearing Bush

Courtesy of BMW OF NORTH AMERICA, INC.

25 11 245 REPLACING SHIFT-ARM SUPPORT BEARING

Necessary preliminary tasks:

- Remove complete exhaust system, see **18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM** .
- Remove heat shield.
- Remove propeller shaft from transfer box at rear.
- Release center bearing.
- Tie propeller shaft to one side.

Tasks are described in **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .

Lever support bearing (1) with a short screwdriver out of mounting.

Pull support off shift arm.

Fig. 28: Pulling Support Off Shift Arm

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Grease bearing pin of shift arm.

Fit support bearing (1) with opening (2) towards top rear onto mounting.

Fig. 29: Fitting Support Bearing With Opening
Courtesy of BMW OF NORTH AMERICA, INC.

16 CENTRE SHIFT AUTOMATIC TRANSMISSION

25 16 056 REMOVING AND INSTALLING / REPLACING SHIFT TOWER (STEPTRONIC)

Necessary preliminary tasks:

- Remove trim for instrument panel, see **51 45 030 REMOVING AND INSTALLING INSTRUMENT PANEL TRIM** .

Move selector lever to "P" position.

Grip clamping sleeve (1) and slacken nut (2).

Installation:

Adjust selector lever, see **24 00 018 ADJUSTING SELECTOR LEVER (A5S 360R / 390R, A4S 200R, 6HP26Z/19Z)** .

Fig. 30: Clamping Sleeve And Slacken Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Brace cable on hex head (1) and loosen nut (2).

Installation:

Tightening torque: 1AZ, see 25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION .

Fig. 31: Hex Head And Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1).

Pull cable (2) out of holder.

Fig. 32: Screws And Cable
 Courtesy of BMW OF NORTH AMERICA, INC.

Disconnect plugs (1 and 2).

Unscrew bolt (3).

Tightening torque: 5AZ, see **25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION** .

Slide interlock cable (4) down using a screwdriver (5) from shaft of interlock locking pawl towards left.

Installation:

Adjust interlock cable and check interlock function, see **25 16 175 Adjusting interlock cable.**

Fig. 33: Plugs, Bolt, Interlock Cable And Screwdriver
 Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1).

Tightening torque: 3AZ, see **25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION** .

Feed sleeve (2) out of body and remove shift tower.

Fig. 34: Screws And Sleeve
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Insert rubber seal (1) of shift cable (2) in transmission tunnel (3).

Fig. 35: Rubber Seal, Shift Cable And Transmission Tunnel
Courtesy of BMW OF NORTH AMERICA, INC.

25 16 061 REPLACING GRIP/KNOB FOR SHIFT LEVER

NOTE: The method for removing the grip/knob is identical for manual and automatic transmissions.

Do not twist grip/knob when removing as the turning lock in the knob will shear off.

Detach grip/knob in direction of arrow with a firm tug.

NOTE: Illustrations show E85.

Fig. 36: Detach Grip/Knob
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Fit grip/knob on shift lever, align and press on until it can be felt to snap into place.

25 16 065 REPLACING GAITER (SELECTOR LEVER COVER) FOR SHIFT TOWER

Necessary preliminary tasks:

- Remove grip, see **25 16 061 Replacing grip/knob for shift lever.**
1. Carefully pull gaiter taut on leather
 2. Gently press frame inwards until catch is released
 3. Lift out gaiter

Fig. 37: Lifting Out Gaiter
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: Start removing at top left, otherwise the frame will be damaged.

Installation:

Retaining lugs must not be damaged.

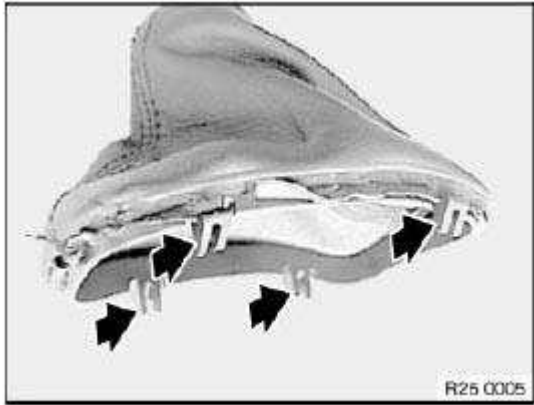

Fig. 38: Retaining Lugs

Courtesy of BMW OF NORTH AMERICA, INC.

25 16 175 ADJUSTING INTERLOCK CABLE

Necessary preliminary tasks:

- Remove function carrier, see **51 45 106 REMOVING AND INSTALLING/REPLACING FUNCTION CARRIER ON INSTRUMENT PANEL TRIM** .

Move selector lever (1) to "P" position (front stop of shifting gate).

Loosen screw (4).

Tightening torque: 5AZ, see **25 16 SHIFT CONSOLE - AUTOMATIC TRANSMISSION** .

It must be possible to move cable (2) slightly in holder (3).

Move ignition key to "zero" position and remove.

Press interlock locking pawl (5) downwards as far as it will go.

Tighten screw (4).

Fig. 39: Selector Lever, Cable, Holder, Screw And Locking Pawl
 Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Check adjustment of Interlock:

- Turn ignition key to "ignition" position and then back to "zero" position.
- Interlock locking pawl (1) must rest (3) on contact face in shift tower (2).
- If necessary, adjust interlock cable again.

Fig. 40: Locking Pawl And Shift Tower
 Courtesy of BMW OF NORTH AMERICA, INC.

TRANSMISSION

Gear Shift Mechanism - Operating Fluids

1.0 GENERAL INFORMATION

Components of the gear shift mechanism located outside of the transmission housings, such as ball cups, bearing bushings, gearshift joints, etc. may be lubricated with Polylub GLY 801 (BMW Part No. 81 22 9 407 647).

TRANSMISSION

2007-10 TRANSMISSION

Manual Transmission - Operating Fluids

1.0 GENERAL INFORMATION ON GEAR LUBRICANTS

Gear lubricants for manual transmissions must conform to the following requirements due to the different transmission designs with considerable variation in loads, temperature and speeds.

The qualities of a recommended gear lubricant are:

- A. Load carrying capacity, i.e. high-pressure resistance.
- B. Noise reduction.
- C. Non-corrosive to various metals.
- D. Non-foaming.
- E. Non-separation of additives at operating temperatures.
- F. Non-sludge forming.
- G. Prevention of swelling, hardening and shrinking of seals.

These properties are already provided in manual transmission oil by:

- High-pressure additives.
- Corrosion inhibitors.
- Oxidation inhibitors (inhibitors which limit or prevent chemical reactions).
- Anti-foaming agents.

2.0 OIL ADDITIVES

BMW manual transmissions are designed so that they do not require aftermarket oil additives.

BMW disapproves the use of any oil additives and cannot accept the liability for any consequential damage that results from using oil additives.

3.0 MANUAL TRANSMISSION OIL REQUIREMENTS AND SPECIFICATIONS

BMW

- A. All reputable brand mineral-based transmission oils of viscosity class SAE 80 according to specifications MIL-L-2105 or API GL-4 (**no label** on transmission bell housing).
- B. Synthetic transmission fluid, Mobil SHC 630 (325e/528e without dual mass flywheel, produced before mid-1986). Manual transmissions which are filled with Mobil SHC 630 synthetic gear lube have a **green label** with the words "Special Oil" located next to the oil filter plug.

Fig. 1: Identifying Manual Transmission - Green Label
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Mobil SHC 630 is available in 5-gallon pails or 55-gallon drums from:

Filling BMW transmissions with unapproved synthetic gear lubes could cause the following damage:

- Premature synchromesh ring wear
- Reduced service life of bearings
- Tooth profile damage
- Faster wear of selector forks
- Damage to radial shaft oil seals

Transmission gear clashing will eventually result.

NOTE: Do not use synthetic fluid Mobil SHC 630 in other vehicles. The transmission synchronizers of cars other than listed above are not compatible with synthetic fluid and premature wear will result.

NOTE: To reduce the physical effort required to change gear at low ambient temperatures, the following oils can be used in the transmission during the winter:

- Single-grade HD mineral engine oils SAE40, SAE30, SAE20
- In countries where the ambient temperatures are particularly low, ATF oils can also be used.

This has the disadvantage that the transmission tends to rattle or knock while in neutral at higher temperatures.

CAUTION: These transmissions must never be filled with synthetic engine oils or multigrade engine oils, since these oils contain coefficient of friction-reducing agents that can adversely affect operation of the synchromesh mechanism.

- C. Automatic Transmission Fluid (ATF) of Dexron® II or Dexron® III formulation on any of the following:
- Dual mass flywheel
 - Direct drive fifth gear as of 9/90
 - Six-speeds

Manual transmissions which are filled with ATF have 17mm external hex plugs in the filler and drain openings as well as an **orange label** on the transmission bell housing next to the filler plug.

Fig. 2: Identifying Manual Transmission - Orange Label
Courtesy of BMW OF NORTH AMERICA, INC.

- D. From model year 1998 (9/97 production) all manual transmissions are filled with Esso/Exxon "MTF-LT-1" lifetime fluid. A **yellow label** with the letters "MTF-LT-1" is located next to the oil filler plug.

No oil change is required for the entire service life of these transmissions.

In the event of a repair, the transmission must only be filled with the lifetime oil.

Esso/Exxon MTF-LT-1

BMW P/N 83 22 9 408 942.

- E. From model year 2004 some manual transmissions are filled with Castrol "MTF-LT-2" lifetime fluid. This fluid has the same properties as the "MTF-LT-1" fluid indicated above in section D. The "MTF-LT-1" fluid may be mixed and/or substituted for the "MTF-LT-2" manual transmission fluid.

2006 MY and later E60 M5 and E63/64 M6 equipped with and without SMG utilizes only MTF-LT-2 fluid.

2006 MY and later E85 M Roadster and Coupe require MTF-LT-2 fluid.

MTF-LT-2 Fluid

BMW P/N 83 22 0 309 031

- F. From Model Year 2006 all vehicles equipped with a manual transmission and the N52 engine require the MTF-LT-3 lifetime fluid.

N52 equipped vehicles:

- E60 from 3/2005 production
- E85 from 9/2005 production
- E86 from 1/2006 production
- E90/91 from 3/2005 production
- E92 from 7/2006 production

- E83 from 9/2006 production

MTF-LT-3

BMW P/N 83 22 0 409 878

No oil change is required for the entire service life of these transmissions.

MANUAL TRANSMISSION COLD SHIFT EFFORT

NOTE: The following information does not apply to transmissions filled with lifetime fluid.

Transmission cold shift effort is reduced by replacing the original oil (SAE 80 or Mobil SHC 630) with a reputable brand single-grade HD engine mineral oil of API-SE standards (SAE 20, SAE 30, or SAE 40). Thinner oils will run the risk of increased gear noise.

A further reduction in shift effort can be obtained by using ATF, but gear noise will be more noticeable compared to single-grade engine mineral oils.

For summer operation it is recommended that ATF or engine oil be drained and replaced by the original lubricant, either SAE 80 or Mobil SHC 630 (as specified) transmission fluid.

CAUTION: Never fill a manual transmission with synthetic engine oils or multigrade mineral-based engine oils, since they have friction-reducing components that could impair the function of the synchronizers.

4.0 TRANSMISSION OIL CHANGE INTERVAL

Starting with 1998 models all manual transmissions are filled with lifetime fluid and require no fluid changes for the life of the vehicle.

5.0 SMG: SEQUENTIAL MANUAL GEAR BOX

All models SMG Hydraulic Unit require the use of Pentosin CHF 11S fluid.

TRANSMISSION

Manual Transmission - Repair Instructions - X3

00 COMPLETE TRANSMISSION

00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Pour oil only into appropriately marked containers
- Do not pour oil into drinking vessels (drinks bottles, glasses, cups or mugs)
- Observe country-specific safety regulations

First aid measures:

- Do not induce vomiting.

If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

If the person affected is unconscious, do not administer anything by mouth, place the person in the recovery position and seek immediate medical attention.

00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear protective goggles
- Wear oil-resistant protective gloves
- Observe country-specific safety regulations

First aid measures:

- Eye contact: Rinse eyes immediately with plenty of water for at least 15 minutes; if available, use an eye-rinsing bottle. If irritation of the eyes persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

NOTE: Do not use solvents/thinners.

00 SAFETY INSTRUCTIONS FOR HANDLING OIL

**WARNING: Danger of poisoning if oil is ingested/absorbed through the skin!
Risk of injury if oil comes into contact with eyes and skin!**

Recycling:

Observe country-specific waste-disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

NOTE: Do not flush oil away with water or aqueous cleaning agents.

00 11.. ... DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION

**NOTE: Gearbox must be at normal operating temperature.
Gear oil:**

Filling capacities:

Draining gear oil:

- Release oil drain plug (1) and filler plug (2).
- Clean oil drain plug (1) and screw in.

Tightening torque: 23 00 4AZ, see **23 00 TRANSMISSION IN GENERAL** .

Fill transmission with ATF.

- Pour in gear oil until overflowing.
- Tighten in filler screw (2).

Tightening torque: 23 00 4AZ, see **23 00 TRANSMISSION IN GENERAL** .

23 .. UNIVERSAL TRANSMISSION BRACKET

Special tools required:

See **23 MANUAL TRANSMISSION** .

- 00 2 030
- 23 0 132
- 23 4 050

NOTE:

- The universal transmission bracket is introduced for the E60 AWD
- Suitable for manual and automatic transmissions

IMPORTANT: Front and rear supports (1) can be laterally adjusted by means of screws (2). Carrier (3) of rear supports (1) can be longitudinally adjusted by means of screw.
Supports must be adapted in length and width to the transmission.

Fig. 2: Rear Supports And Rear Supports Carrier
Courtesy of BMW OF NORTH AMERICA, INC.

Supporting transmission:

Support transmission with special tools 23 4 050, 23 0 132 , 00 2 030 .

IMPORTANT: Transmission must be secured with tensioning strap (1).

Fig. 3: Special Tools And Tensioning Strap
Courtesy of BMW OF NORTH AMERICA, INC.

23 ... UNIVERSAL TRANSMISSION RETAINING BRIDGE

Special tools required:

See 24 AUTOMATIC TRANSMISSION

- 00 1 450
- 24 0 200

NOTE:

- The transmission retaining bridge 24 0 200 is suitable for both manual and automatic transmissions

IMPORTANT: Adapters and spindles must be adapted for positive locking to the transmission.
(Risk of injury)

Adapt adapters (1) and spindle with thrust piece (3) to transmission.

Adapt length with slide (2).

Screw in spindle (4).

IMPORTANT: Before mounting on assembly stand 00 1 450 , check retaining bridge for secure seating.

Fig. 4: Adapters, Spindle And Thrust Piece
Courtesy of BMW OF NORTH AMERICA, INC.

23 00 019 REMOVING AND INSTALLING TRANSMISSION (GS6-37BZ N52K)

Special tools required:

- **00 2 030 UNIVERSAL HYDRO-LIFTER BASIC UNIT**
- **00 9 110 CIRCLIP PLIERS**
- **00 9 120 TORQUE ANGLE MEASURING DIAL**
- **00 9 130 MAGNET WITH 1/2" CONNECTION**
- 21 2 221, see **21 CLUTCH**
- 23 0 132, see **23 MANUAL TRANSMISSION**
- 23 4 050, see **23 MANUAL TRANSMISSION**

**IMPORTANT: After completion of work, check transmission oil level, see 00 11.. ... DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION .
Use only the approved gear oil .**

Failure to comply with this requirement will result in serious damage to the manual transmission.

IMPORTANT: Aluminium-magnesium materials.

No steel screws/bolts may be used due to the threat of electrochemical corrosion.

A magnesium crankcase requires aluminium screws/bolts exclusively.

Aluminium screws/bolts must be replaced each time they are released .

The end faces of these screws/bolts are painted blue for the purposes of reliable identification.

Jointing torque and angle of rotation must be observed without fail (risk of damage) .

Necessary preliminary tasks:

- Disconnect battery
- Remove underbody protection with bracket at front and rear
- Remove reinforcement plate
- Remove complete exhaust system
- Remove heat shields
- Remove front propeller shaft at transfer box and tie to one side, see **REMOVAL & INSTALLATION** .
- Support engine with lifter when removing transmission
- Remove propeller shaft from transmission.
- Release center bearing.
- Tie propeller shaft to one side.

Tasks are described in Removing propeller shaft, see **REMOVAL & INSTALLATION** .

Fig. 5: Locating Propeller Shaft Bolts
Courtesy of BMW OF NORTH AMERICA, INC.

Detach plugs (1) and (2) from servomotor.

Fig. 6: Plugs
Courtesy of BMW OF NORTH AMERICA, INC.

Detach plug (1) from reversing light switch.

Release cable from mountings and tie to one side.

Fig. 7: Plug

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Pressure line of clutch slave cylinder remains connected.

IMPORTANT: Relieve tension on clutch slave cylinder slowly; otherwise air will be drawn in through sealing sleeve.

Release nuts and remove clutch slave cylinder.

Tightening torque: 21 52 5AZ, see **21 52 CLUTCH OPERATION (HYDRAULIC)** .

Fig. 8: Locating Clutch Slave Cylinder Nuts

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Release aluminium screw on right next to cable retaining plate with special tool 00 9 010 .

Installation:

Aluminium screws must be replaced.

Tightening torque: 23 00 2AZ, see **23 00 TRANSMISSION IN GENERAL** .

Fig. 9: Special Tool 00 9 010

Courtesy of BMW OF NORTH AMERICA, INC.

Supporting transmission:

Support transmission with special tools 23 4 050, 23 0 132 , 00 2 030 .

Secure transmission with tensioning strap (1).

Tasks are described in **23 .. UNIVERSAL TRANSMISSION BRACKET** .

After completion of work, check transmission oil level.

Fig. 10: Special Tools And Tensioning Strap

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws and remove transmission cross-member.

Tightening torque: 22 32 4AZ/5AZ, see 22 32 TRANSMISSION MOUNTS .

Fig. 11: Transmission Cross-Member Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Unlock bearing pin (1) in direction of arrow and remove.

Lift out shift arm.

Installation:

Grease bearing pins (1).

Fig. 12: Unlocking Bearing Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Lift off retainer (1).

Disconnect shift rod (2).

Installation:

Grease shift rod.

Make sure shims (3) are in correct position.

Fig. 13: Disconnecting Shift Rod

Courtesy of BMW OF NORTH AMERICA, INC.

Release screws.

Installation:

Observe **screw fastening sequence** without fail.

Tightening torque, steel screws: 23 00 1AZ, see **23 00 TRANSMISSION IN GENERAL** .

Aluminium screws **must** be replaced.

Tightening torque and angle of rotation

Aluminium screws: 23 00 1AZ, see **23 00 TRANSMISSION IN GENERAL** .

IMPORTANT: Do not allow transmission to hang from the transmission input shaft when removing and installing, as the clutch disk will be deformed. Pull transmission downwards and remove.

Fig. 14: Tightening Sequence Of Screws
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Secure angle of rotation special tool 00 9 120 with magnet 00 9 130 to floor plate.

Screw down aluminium screws according to angle of rotation.

Angle of rotation: 23 00 2AZ, see **23 00 TRANSMISSION IN GENERAL** .

Fig. 15: Special Tool 00 9 120 And 00 9 130
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Check that dowel sleeves are correctly seated.

Replace damaged dowel sleeves.

Ensure correct position of cover plate.

Fig. 16: Dowel Sleeves

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Check lubrication of transmission input shaft for sticky consistency. If grease is sticky, clean input shaft and replace clutch plate, see **21 21 500 REMOVING AND INSTALLING/REPLACING CLUTCH (SAC)** .

Check clutch plate for friction rust in splines and replace if necessary.

Mechanically remove existing grease and lining abrasion from splines of clutch plate (with a cloth).

Fig. 17: Locating Input Shaft

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Greasing specification:

- o Remove and clean release bearing and release lever, see **21 51 500 REMOVING AND INSTALLING OR REPLACING CLUTCH RELEASE BEARING/LEVER** .
- o Push on grease scraper ring 21 2 221 as far as it will go.

- Grease splines (1) of input shaft with a brush.
- Detach grease scraper ring.

Fig. 18: Splines Of Input Shaft

Courtesy of BMW OF NORTH AMERICA, INC.

23 00 036 INSTALLING REPLACEMENT TRANSMISSION (GS6-37BZ/DZ)

IMPORTANT: After completion of work, check transmission oil level, see 00 11... ..
DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION .
Use only the approved transmission fluid .

Failure to comply with this instruction will result in serious damage to the transmission.

Recycling:

Catch and dispose of escaping transmission fluid.

Observe country-specific waste-disposal regulations

Necessary preliminary tasks:

- Drain gear oil at oil drain plug.

Tightening torque: 23 00 4AZ, see 23 00 TRANSMISSION IN GENERAL .

- Remove transfer box.
- Remove transmission, see 23 00 019 Removing and installing transmission (GS6-37BZ N52K).

Convert following parts from previous transmission to new transmission.

- Release bearing and release lever, see 21 51 500 REMOVING AND INSTALLING OR REPLACING

CLUTCH RELEASE BEARING/LEVER .

- Ball pin and spring wire clip.
- Studs for clutch slave cylinder.
- Reversing light switch tightening torque: 23 41 5AZ, see **23 41 EXTERNAL GEARSHIFT COMPONENTS .**

Convert shift rod joint.

Push back retaining ring (1) and drive out dowel pin (2).

Fig. 19: Removing Dowel Pin

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Check damping disk (6) for damage and replace if necessary.

Fig. 20: Damping Disk

Courtesy of BMW OF NORTH AMERICA, INC.

Add final details to vehicle.

Check oil level.

Installation:

Observe greasing specification .

23 00 036 INSTALLING REPLACEMENT TRANSMISSION (GS6-37BZ) AWD

IMPORTANT: After completion of work, check transmission fluid level. See **DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION** . Use only the approved transmission fluid. Failure to comply with this instruction will result in serious damage to the transmission.

NOTE: **Recycling:** Catch and dispose of escaping transmission fluid. Observe country-specific waste-disposal regulations.

Necessary preliminary tasks:

- Drain gear oil at oil drain plug. Tightening torque, see 23 00 4AZ in **00 COMPLETE TRANSMISSION** .
- Remove transfer case.
- Remove transmission.

Convert following parts from previous transmission to new transmission:

- Release bearing and release lever. See **51 CLUTCH RELEASE CONTROL WITH LEVER** .
- Knurled pin for clutch slave cylinder.
- Reversing light switch tightening torque, see 23 41 5AZ in **23 41 EXTERNAL GEARSHIFT COMPONENTS** .

Convert shift rod joint. Push back retaining ring (1) and drive out dowel pin (2).

Fig. 21: Push Back Retaining Ring (1) And Drive Out Dowel Pin (2)
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Check damping disk (6) for damage and replace if necessary.

Fig. 22: Checking Damping Disk (6) For Damage
Courtesy of BMW OF NORTH AMERICA, INC.

Add final details to vehicle. Check oil level. Installation: Observe greasing specification.

11 HOUSING WITH COVER

23 11 614 REPLACING GUIDE TUBE FOR CLUTCH RELEASE UNIT (GS6-37BZ/DZ)

NOTE: (transmission removed)

Necessary preliminary tasks:

Remove clutch release bearing and release lever from guide tube, see **21 51 500 REMOVING AND INSTALLING OR REPLACING CLUTCH RELEASE BEARING/LEVER** .

Unfasten screws.

Remove guide tube (1).

Installation:

Clean thread.

Install screws with Loctite 243.

Tightening torque: 23 11 2AZ, see **23 11 CASE AND COVER** .

Fig. 23: Locating Screws

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Remove sticker (1) and adhesive with a suitable solvent.

Fig. 24: Sticker

Courtesy of BMW OF NORTH AMERICA, INC.

12 BEARING IN HOUSING, SEALING RING

23 12 050 REPLACING RADIAL SHAFT SEAL FOR OUTPUT FLANGE (GS6-37BZ / DZ H-TRANSMISSION)

Special tools required:

See 23 MANUAL TRANSMISSION .

- 23 0 020
- 23 2 320
- 23 3 161

- 23 3 162
- 33 1 150

IMPORTANT: After completion of work, check transmission oil level, see 00 11... ..
DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION .
Use only approved transmission oil .
Failure to comply with this instruction will result in serious damage to the
transmission.

Necessary preliminary tasks:

- Remove exhaust system, see 18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM (M54) .
- Support transmission, see 23 00 019 Removing and installing transmission (GS6-37BZ N52K).
- Remove transmission cross-member, see 23 00 019 Removing and installing transmission (GS6-37BZ N52K).
- Remove transmission bearing block, see 23 00 019 Removing and installing transmission (GS6-37BZ N52K).
- Unflange propeller shaft from transmission and tie up to one side

Brace output flange with special tool 23 0 020 .

Release collar nut with special tool 23 2 320 .

Installation:

Mark flange with thermo pin and heat to min. 100°C.

WARNING: Scalding hazard! Fit flange wearing suitable protective gloves only!

IMPORTANT: Do not drive on flange.

Secure collar nut with Loctite 243.

- Loctite 243: BMW Parts Service.

Fig. 25: Special Tool 23 0 020 And 23 2 320
Courtesy of BMW OF NORTH AMERICA, INC.

- Tightening torque: 23 21 1AZ, see **23 21 TRANSMISSION SHAFTS** .

Detach output flange with special tool 33 1 150 from output shaft.

Fig. 26: Special Tool 33 1 150
Courtesy of BMW OF NORTH AMERICA, INC.

Release screw on special tool 23 3 161 .

Push special tool over output shaft and screw firmly into sealing ring.

Fig. 27: Pushing Special Tool Over Output Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Insert screw into special tool again and continue turning until sealing ring is pulled out of transmission housing.

If necessary, remove Woodruff key of sealing ring.

Fig. 28: Turning Special Tool
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Coat sealing lips of new radial seal with gear oil.

Drive in radial seal as far as it will go with special tool 23 3 162 and plastic hammer.

Fig. 29: Installing Radial Seal

Courtesy of BMW OF NORTH AMERICA, INC.

23 12 088 REPLACING RADIAL SEAL FOR SELECTOR SHAFT (GS6-37BZ)

Special tools required:

See **23 MANUAL TRANSMISSION**

- 23 0 210
- 23 0 220

IMPORTANT: After completion of work, check transmission oil level, see 00 11... .. DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION .

Use only approved transmission oil .

Failure to comply with this instruction will result in serious damage to the transmission.

Necessary preliminary tasks:

- Remove transfer case, see **27 10 010 REMOVING AND INSTALLING TRANSFER CASE (ATC 400 X-DRIVE)** .
- Shift transmission into 2nd gear

Transmission extension N46

Release bolts and remove transmission extension (1).

Tightening torque: 23 2 5AZ, see **23 00 TRANSMISSION IN GENERAL** .

Fig. 30: Transmission Extension
Courtesy of BMW OF NORTH AMERICA, INC.

Lever retaining ring (1) out of groove with a small screwdriver.

Slide locking ring (1) towards rear.

Drive out cylinder pin (2).

Fig. 31: Removing Cylinder Pin
Courtesy of BMW OF NORTH AMERICA, INC.

Screw in special tool 23 0 210 until it is firmly connected with radial seal (1).

Pull out radial seal with special tool 23 0 210 .

Fig. 32: Radial Seal And Special Tool 23 0 210
Courtesy of BMW OF NORTH AMERICA, INC.

Coat sealing lips of radial seal and selector shaft with transmission oil.

Drive in radial seal with special tool 23 0 220 .

23 12 508 REPLACING RADIAL SHAFT SEAL FOR DRIVE SHAFT (GS6-37BZ/DZ)

Special tools required:

See **23 MANUAL TRANSMISSION**

- 23 3 151
- 23 3 152

IMPORTANT: After completion of work, check transmission fluid level, see 00 11.. ... DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION .
Use only approved transmission oil .
Failure to comply with this requirement will result in serious damage to the automatic transmission!

Necessary preliminary tasks:

- Remove transmission, see 23 00 036 Installing replacement transmission (GS6-37BZ/DZ).
- Remove clutch release unit and release lever from guide tube, see 21 51 500 REMOVING AND INSTALLING OR REPLACING CLUTCH RELEASE BEARING/LEVER .

Release screws.

Tightening torque: 23 11 2AZ, see 23 11 CASE AND COVER .

Remove guide tube (1).

Installation:

Clean guide tube.

Do not grease guide tube.

Fig. 34: Locating Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Release screw on special tool 23 3 151 .

Push special tool onto drive shaft and screw into sealing ring.

Fig. 35: Pushing Special Tool Onto Drive Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Insert screw into special tool 23 3 151 again and continue turning until sealing ring is pulled out of transmission housing.

Fig. 36: Turning Special Tool
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Coat sealing lips of radial seal with gear oil.

Push radial seal (1) onto drive shaft up to housing.

Drive in radial seal (1) as far as it will go with special tool 23 3 152 and plastic hammer.

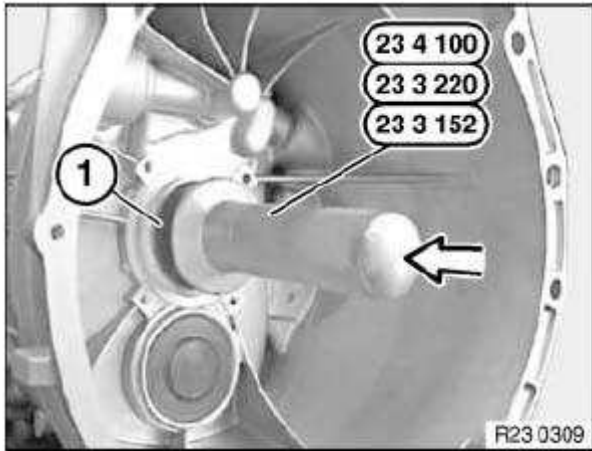

Fig. 37: Installing Radial Seal

KINEMATIC DIAGNOSIS SYSTEM AND ENVIRONMENT

32 01 99 (503) all countries BMW KDS (Beissbarth)

Fig. 1: Kinematic Diagnosis System
Courtesy of BMW OF NORTH AMERICA, INC.

1. FOREWORD

1.1 Objectives

Wheel alignment has become an increasingly complex subject. The aim of this BMW Service Technology bulletin, therefore, is to achieve several objectives:

- Creation of guidelines for working with the BMW Kinematic Diagnosis System (KDS).
- Familiarization with wheel alignment technology for current vehicles and clarifying any questions which arise in this connection.
- Transparency and clarification of different terms.
- Clarification of the causes of errors in the past, such that they can be avoided after reading this document.

- Creation of conditions for dealing safely with the BMW KDS.

1.2 Further development of the BMW Kinematic Diagnosis System

- The BMW Kinematic Diagnosis System is an integrated part of automotive system concepts. It ensures that work is carried out in a particularly rational manner which is appropriate for BMW requirements, such that you can also be certain of being prepared for future technological developments. As far as precision and performance in wheel alignment and tuning is concerned, BMW, together with leading manufacturers, has made the best of what is technically feasible: the BMW Kinematic Diagnosis System.
- The BMW Kinematic Diagnosis System manufactured by Beissbarth is more than just the further development of conventional wheel alignment equipment. It sets new standards in precision, performance, speed and handling. It is a guarantor for the perfection which BMW service customers rely on.
- Ride comfort, road safety and tire wear depend to a large extent on the perfect interplay of the vehicle's kinematic functions. BMW is constantly launching new generations of chassis which are even better than their predecessors. This is why there are fewer kinematics system adjusting points and narrower tolerances when measuring and tuning the chassis.
- With the use of the multi-link rear suspension and the E36, the electronic wheel alignment devices are no longer suitable for BMW wheel alignment purposes. This applies to both the measuring procedure and measuring precision. The generation of equipment which was approved with the E36 series still fulfils all the requirements placed on a modern wheel alignment device, including the use of the latest computer technology.
- Only BMW Kinematic Diagnosis Systems manufactured by Beissarth and Bosch may be used for wheel alignment.

1.3 Technical Data

Fig. 2: Display Kinematic Diagnosis Systems Technical Data
 Courtesy of BMW OF NORTH AMERICA, INC.

KINEMATIC DIAGNOSIS SYSTEMS TECHNICAL DATA

1. Display	17" graphic screen with high-resolution graphics (640x480 pixels with 256 colours)
2. On-screen text	in the appropriate national language
3. Wheel dimensions	12" ...20"
4. Vehicle memory locations	unlimited
5. Rotating plates	Loadbearing capacity 1000 kg, angle of rotation $\pm 360^\circ$, 450 x 450 x 50 mm (L x W x H), sliding range ± 50 mm, weight 18 kg
6. Sliding plates	Loadbearing capacity 1000 kg, angle of rotation $\pm 10^\circ$, 450 x 450 x 50mm (L x W x H), sliding range ± 65 mm, weight 17 kg
7. Electrical connection	100...115 V / 220...240 V 50/60 Hz, 0.5 kW (other connections on request)

1.4 Scope of delivery

- 1 PC display device with graphic screen, graphical tablet, small or large equipment cabinet including automatic charging station, DIN A4 dot matrix printer
- 4 Measuring sensors with CCD camera technology and infrared data transmission with built-in power supply
- 1 Cable set (comprising 4 cables)
- 1 Brake clamping device
- 1 Steering lock device
- 2 Electronic precision rotating plates with integrated sensor without access ramps
- 2 Sliding plates without access ramps
- 4 BMW quick-clamping units, comprising a P8-68 locating bell and P267 01 quick-acting clamp including coated holding claws
- 1 Operating instructions for BMW KDS (8 languages)
- 1 BMW software and the BMW vehicle setpoint data with setting screens as well as text for the measurement preparations

1.5 Accessories required

- 2 Locating rods for positioning the vehicle
- 1 Set of sand bags for the prescribed loading

1.6 Accessories recommended

- 4 Quick-clamping units
- 2 Sets of access ramps
- 1 Remote control / display

1 Trolley (for ballast bags, rotating and sliding plates and 4 quick-acting clamps)

2. MEASURING OPTIONS USING THE BMW KINEMATIC DIAGNOSIS SYSTEM

2.1 Front axle

- Toe-in (single and total toe-in in relation to the geometrical drive axis)
- Camber (with steering wheel pointing straight ahead)
- Wheel displacement (in relation to the left-hand front wheel)
- Castor, kingpin inclination and toe-differential angle

2.2 Rear axle

- Toe-in (single and total toe-in in relation to the longitudinal center plane of the vehicle --> previously called symmetrical axis)
- Geometrical drive axis
- Camber

2.3 Other measuring options

- Rear wheel displacement
- Wheelbase difference
- Lateral displacement on right
- Lateral displacement on left
- Track difference
- Axial displacement

3. SYSTEM DESCRIPTION

3.1 BMW Kinematic Diagnosis System 1, based on the Beissbarth ML4000

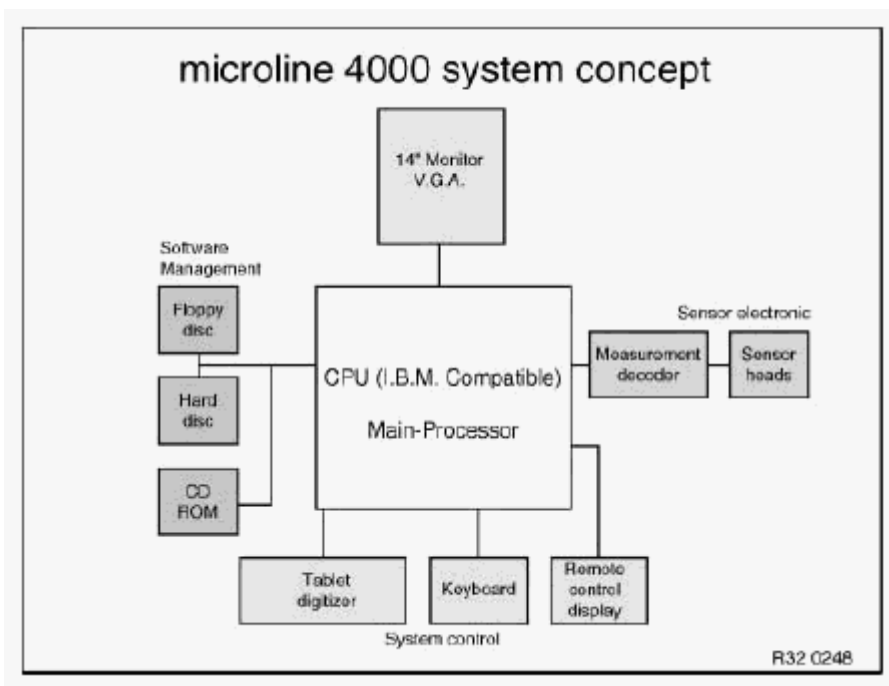

Fig. 3: BMW Kinematic Diagnosis System Diagram
 Courtesy of BMW OF NORTH AMERICA, INC.

The KDS 1 is available in two different designs at no extra charge:

1. Mobile workstation

Fig. 4: Mobile Workstation
 Courtesy of BMW OF NORTH AMERICA, INC.

2. Mobile compact cabinet

Fig. 5: Mobile Compact Cabinet
Courtesy of BMW OF NORTH AMERICA, INC.

The larger workstation offers a small storage area for accessories, while the compact cabinet is mobile and ideal for restricted working areas. Both variants can be supplied as a cableless measuring system (infrared). From the point of view of measuring technology, there is only a difference in the handling and equipping of the system. For both designs, the four measuring sensors are stored in integrated inserts with rechargeable battery charging points. When automatically charged over night, the measuring sensor batteries provide enough power for 10 hours of continuous use.

3.2 Computer

- The KDS 1 system comprises tested and reliable industrial components. The computer is an IBM-compatible, 32-bit Intel processor with CD ROM drive to the industry standard.

Fig. 6: Computer
Courtesy of BMW OF NORTH AMERICA, INC.

3.3 Graphical tablet

- All functions are shown in graphical form on a "pictogram" panel. The panel is protected by a plexiglass cover. It can easily be replaced if more extensive design modifications are necessary. The operator interface has no membrane and is thus protected against damage. The main functions are activated by

clicking the icon with the digital pen.

Fig. 7: Graphical Tablet

Courtesy of BMW OF NORTH AMERICA, INC.

3.4 Equipment cabinet

- The PC with graphic monitor and removable operating panel, supports for the measuring sensors, the remote control and the A4 printer are integrated into the workstation. The charging station is located in the cabinet and can also be connected to the measuring sensors and the remote control using the plug-in cables (operating while simultaneously charging the batteries).

Fig. 8: Equipment Cabinet

Courtesy of BMW OF NORTH AMERICA, INC.

3.5 Remote display

A cableless remote display can be supplied on request. The remote control keys are only active during measuring and adjustment (not for customer data input, or if selecting a vehicle or editing the setpoint data etc.). The following displays are supported by the remote control:

- Measured value with setpoint / actual comparison and tolerance bar
- Steering graphics for steering routines

- Live overview of the track / camber values with a setpoint / actual comparison
- Rim run-out compensation

Fig. 9: Remote Display
Courtesy of BMW OF NORTH AMERICA, INC.

3.6 Measuring sensors with CCD camera

The measuring sensors are each equipped for automatic measurement with two CCD cameras and their own processor for the cableless infrared transmission of data with integrated batteries. Benefits:

- No temperature deviation
- Very high measuring resolution (the track could theoretically be measured in angular seconds)
- Single track range of more than ± 9 degrees for the constant display of toe-in when changing the tie-rod ends
- Exact system accuracy, i.e. when carrying out measurements at the vehicle following rim run-out compensation, the toe-in and camber measurements are accurate to 2 angular minutes

Fig. 10: Measuring Sensors With CCD Camera
Courtesy of BMW OF NORTH AMERICA, INC.

3.7 BMW Quick-acting clamp

- BMW quick-acting clamp for holding the measuring sensors precisely in position and measuring without rim run-out compensation.

NOTE: Any existing quick-acting clamps, e.g. from older F1600s or ML-3000s, must not be used on the BMW KDS.

Fig. 11: BMW Quick-Acting Clamp
Courtesy of BMW OF NORTH AMERICA, INC.

3.8 Rotating / sliding plates

- Electronic precision rotating plates for the front wheels with integrated sensor (360 degree measuring range)
- Stable sliding plates for the rear wheels with a swivelling / rotating top plate
- Accessories: Cover hood for aluminium rotating plates

Fig. 12: Rotating/Sliding Plates
Courtesy of BMW OF NORTH AMERICA, INC.

3.9 Sensor pins

- A new BMW light alloy wheel (styling no. 18) has been available as optional equipment from April 1993. When measurements are being made on vehicles with these wheels, new sensor pins are required for the quick-acting clamps of the recommended wheel alignment equipment.
- The new sensor pins are included in the scope of supply for new deliveries of KDS 1 (order number: BS 90 19 11).

Fig. 13: Sensor Pins

Courtesy of BMW OF NORTH AMERICA, INC.

3.10 Spoiler adapter

- In the case of vehicles with very low spoilers, the sensor beam may be broken by the spoiler between the measuring sensors. This primarily occurs in front of the front axle.
- The spoiler adapter is used here as a connecting element between the measuring equipment clamp and the measuring sensor. Thanks to the adapter, the sensors are placed 50 mm lower, thus allowing the sensor beam to move freely below the spoiler.

Fig. 14: Spoiler Adapter

Courtesy of BMW OF NORTH AMERICA, INC.

3.11 Quick-clamping units

- Quick-clamping units for wheel alignment on non-BMW vehicles with rim run-out compensation.
- Rims without sensors boreholes (rims for BMW vehicles from other manufacturers)

Fig. 15: Quick-Clamping Units
 Courtesy of BMW OF NORTH AMERICA, INC.

3.12 Retainers

- The most varied clamping options for the measuring equipment are possible thanks to the versatile retainers and the rubber-coated thrust pieces, even on exotic light-alloy rims.

Fig. 16: Retainers
 Courtesy of BMW OF NORTH AMERICA, INC.

4. WORKSTATION

4.1 Environment

DESCRIPTION AND REQUIREMENTS REFERENCE

Description:	Requirements:
	<ul style="list-style-type: none"> ○ Wheel alignment pits

All lifting platforms currently recommended by BMW (see) for wheel alignment meet the requirements for the BMW KDS.

No particular requirements have to be met in respect of the location at which the BMW KDS is used. The measuring device can be installed over working pits or on lifting platforms.

- Pillar-type lifts with set-down device
- 2 plunger-type lifting platforms with set-down device
- Repair stands with set-down device
- One measuring area (approx. 4.5 m x 7.0 m).
- The rotating plates must be pinned to the platform

The support surfaces for the rotating and sliding plates may only display the following maximum height difference:

- from left to right ± 0.5 mm
- from front to back ± 1.0 mm
- diagonally ± 1.0 mm.

Fig. 17: Rotating And Sliding Plates Height Difference
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: A difference in the height of the rotary plates of ± 2 mm from left to right results in a measuring error of 4.8° in the camber.
As a comparison: The camber tolerance on the E36 is $\pm 10'$. The tire tread difference or varying tire pressure cause measuring errors of the same magnitude.

4.2 Preconditions for alignment

When carrying out the wheel alignment, the front and rear wheels must be centered on the rotating and sliding plates in order that all wheel suspensions remain free of tension during the steering routine and adjustment

work. As a result, the rotating and sliding plates for the relevant wheel bases and track widths of the vehicle to be aligned must be moved.

4.3 Measuring tolerance

All measuring tolerances are system tolerances. This means that the sum of all individual tolerances gives the value shown in the example. Example of camber: Quick-acting clamp + measuring sensor + computer = 1' at a measuring range of $\pm 3^\circ$ (all BMW vehicles are within this measuring range).

4.4 Levelling the measuring station

The manufacturers of the BMW KDS (Beissbarth / Bosch) are able to measure the measuring area to the required accuracy using levelling devices. Any "normal" water level is not suitable for this. Lifting platforms must be levelled under load so that the uneven deflection in the travel rails is taken into account.

IMPORTANT: Adjustment work for the lifting platform concerned must be executed by a specialist (manufacturer's after - sales service).

5. CHASSIS-RELATED TERMS

5.1 Toe-differential angle

- The toe-differential angle (a) is the angular position of the internal wheel on the curve in relation to the external wheel on the curve when driving round bends. The steering is designed such that the angular position of the wheels in relation to each other changes as the steering angle increases.
- In ideal cases, the wheel axes meet at point D in any steering position (except for straight ahead).

Fig. 18: Toe-Differential Angle
Courtesy of BMW OF NORTH AMERICA, INC.

5.2 Camber

- The camber is the angle of inclination of the wheel in relation to the vertical.

Fig. 19: Camber Angle
Courtesy of BMW OF NORTH AMERICA, INC.

5.3 Toe-in

- The toe-in is the reduction in the distance between the front of the wheels and the rear. The toe-in prevents the wheels from moving apart while driving (wobbling and grinding).

Fig. 20: Toe-In
Courtesy of BMW OF NORTH AMERICA, INC.

5.4 Castor

- The castor is the kingpin angle seen from the side in the opposite direction of travel. The line through the center of the spring strut mount and control arm ball joint corresponds to the kingpin.

Fig. 21: Castor Angle
 Courtesy of BMW OF NORTH AMERICA, INC.

5.5 Geometrical drive axis / symmetrical axis

- (1) The geometrical drive axis is the line bisecting the angle of the overall rear wheel toe. The measurements of the front wheels relate to this axis.
- (2) The symmetrical axis represents the center line through the front and rear axes.

Fig. 22: Geometrical Drive Axis/Symmetrical Axis
 Courtesy of BMW OF NORTH AMERICA, INC.

5.6 Wheel displacement angle

- The wheel displacement angle is the angular deviation of the connecting line of the wheel contact points in relation to a line running at 90° to the geometrical drive axis. The wheel displacement angle is positive if the right-hand wheel is displaced to the front, and is negative if it is displaced to the rear.

Fig. 23: Wheel Displacement Angle
 Courtesy of BMW OF NORTH AMERICA, INC.

5.7 Kingpin offset

- The kingpin offset is the distance from the center of the wheel contact point to the contact point of the kingpin extrapolation.

Fig. 24: Kingpin Offset
 Courtesy of BMW OF NORTH AMERICA, INC.

6. WHEEL SUSPENSION

Those parts which connect the wheel to the mostly load-bearing floor elements of the bodywork and guide it in the required direction belong to the wheel suspension. They are connected by axles or other comparable structures and guided by the arms. The wheel suspension plays a decisive role in the handling characteristics of a vehicle. Two main groups have to be distinguished: 1. Rigid axle suspension and 2. Independent wheel suspension.

6.1 Rigid axle suspension

RIGID AXLE SUSPENSION ADVANTAGES AND DISADVANTAGES

Description	Advantages	Disadvantages
The rigid axle suspension has a rigid connection between both wheels or wheel pairs. Any change in one wheel is more or	In the event of deflection taking place, there are no changes to the camber or	Non-driven rear axles may also acquire negative camber

less transferred to the other. It is now only fitted as a rear axle, if at all. However it is frequently used for lorries or busses.	wheel toe. This means: less tyre wear and good track stability.	as well as increasing tyre lateral guidance, thus increasing tyre wear.
--	---	---

6.2 Independent wheel suspension

INDEPENDENT WHEEL SUSPENSION ADVANTAGES AND DISADVANTAGES

Description	Advantages	Disadvantages
State-of-the-art individual wheel suspension is available on BMW vehicles on the front and rear axles. This development has its cause in mass inertia, as a reduction in the non-suspended mass improves wheel and ground contact, and the wheel stays better on the road. Control arms and trailing arms, which have to absorb high longitudinal and lateral forces to some extent, are required for guiding independently suspended wheels.	Wheels suspended independently from each other have no mutual influence on each other.	Depending on the type, changes may occur in the camber, wheel toe, track width, castor and wheelbase.

7. WHEEL ALIGNMENT / PROCEDURE

7.1 Measuring options

An overview of all measuring options and values (VA = front axle, HA = rear axle) is shown below.

WHEEL ALIGNMENT SPECIFICATION

Measuring options	Measuring accuracy	In measuring range	Total measuring range
Total wheel toe (VA + HA)	± 2'	± 2°	± 18°
Single wheel toe (VA + HA)	± 2'	± 2°	± 9°
Camber (VA + HA)	± 1	± 3°	± 10°
Wheel displacement (VA)	± 2'	± 2°	± 9°
Geometrical drive axis	± 2'	± 2°	± 9°
Castor	± 4'	± 18°	± 22°
Kingpin inclination	± 4'	± 18°	± 22°
Toe-differential angle	± 4'	± 20°	± 20°
Maximum steering angle (VA)	± 4'	± 60°	± 300°
Maximum steering angle (HA)	± 4'	± 9°	± 9°
Castor correction range	± 4'	± 7°	± 10°

NOTE: The measuring accuracy details only apply when using the precision rotating and sliding plates as well as the BMW quick-acting clamps.

7.2 Preparatory work

Before commencing the measurement, preparatory work must be carried out at the measuring area and on the vehicle. Preparatory work includes:

- Easy-running rotating and sliding plates
- Aligning the rotating and sliding plates in relation to the track width and wheelbase
- Centering the vehicle on the plates
- Applying the parking brake
- Removing the lock pins on the plates to prevent tension in the chassis under loading
- Checking the rim and tire size, tread depth, tire pressure, steering wheel play, wheel bearings and condition of suspension and shock absorbers
- Fastening the measuring equipment to the wheels
- Loading the vehicle according to BMW KDS specifications
- Rock the vehicle firmly with the brakes released to ensure a stable center position
- Lock the service brake using the brake clamping device

7.3 Initial / final measurement

This measurement can be carried out as a program-guided measurement in the same way as any subsequent adjusting work and the final measurement. The sequence of the chassis measuring points to be called up is specified and controlled by the system software. The individual steps comprise:

- Driving straight ahead to correctly record the wheel toe and camber values for the rear axle
- Steering routine for recording the castor, kingpin inclination and toe-differential angle
- Recording the wheel toe and camber of the front axle (adjust the steering center point in advance)
- Steering routine for measuring the maximum steering angle on the left/right
- Checking the overview of measured values with the setpoint and actual comparison of all measured values

7.4 Printing out the data

Fig. 25: Printing Layout Of Customer And Vehicle Identification Data
 Courtesy of BMW OF NORTH AMERICA, INC.

The report printout from the integrated DIN A4 printer is subdivided into three sections:

- Header lines with customer and vehicle identification data --> the customer data entered before beginning the measurement as well as vehicle data are printed out here.
- Centre section with vehicle data --> this includes the make, type, model and vehicle model year defined when the setpoint data record was selected. The values previously measured for height level, tire pressure and tread depth are also printed in this section.
- The end section with all vehicle alignment values comprises the 3 columns initial measurement, setpoint values and output measurement. The measured values are recorded separately in these three columns.

8. SPECIAL FEATURES

8.1 Free wheel alignment

With free wheel alignment the selection and sequence of the measuring points is freely selectable. The following points must be observed for attaining the correct measurement results:

- Carry out all work in the same way as with the program-guided measurement.
- Before measuring the wheel toe and camber values for the rear axle, the steering must be in the "straight ahead" position to ensure that it is perfectly aligned in relation to the longitudinal center plane of the vehicle.
- Before measuring the single wheel toe values on the front axle, the center of steering must be established to ensure the correct position of the steering wheel.

8.2 System settings

The following settings must only be entered or set once: language, display format, date/time, advertising text, remote control with display, rotating plate selection and printer settings. They remain stored.

9. BMW KINEMATIC DIAGNOSIS SYSTEM COMPARISON (BOSCH - BEISSBARTH)

BMW KINEMATIC DIAGNOSIS SYSTEM COMPARISON (BOSCH - BEISSBARTH)

	Bosch	Beissbarth
Measured value recording	Infrared	CCD camera
Data transmission	Cable	Infrared / cable
Measuring sensor power supply	Cable	Battery / cable
Remote control	Infrared	Infrared
Remote control with measured value display	Cable	Infrared
Setpoint data memory	Floppy disk	Hard disk
Measured value memory	Always the last vehicle measured	Unlimited vehicle memory
Operating system	---	MS-DOS
Languages	English and one language on request	EN, DE, NI, SV, IT, FR, SP (further languages can be called up)
Update	3.5" floppy disk	3.5" floppy disk using TIS/DIS
Monitor	20"	17"
Computer	---	Pentium
Disk drives	2 x floppy disk	1 x floppy, 1 x CD ROM

10. CONTROL MODIFICATION (MENU)

10.1 Remote control with display

The following steps show how the remote control with display is activated:

1. Call up the "**Service**" menu in special functions ("S" key)
2. Call up the "**Remote control**" sub-menu in the "**Service**" menu.
3. Select the "**Remote control with display**" item in the "**Remote control**" sub-menu-this configuration is retained.

IMPORTANT: In the case of equipment without remote control, this must be configured to "No remote control".

10.2 Brief operating instructions

1. Activate the remote control with the "**ON**" button (it may also be switched on during alignment). The title page will appear on the LCD.
2. Select "**Straight ahead**" of the "**Initial measurement**", "**Adjustment work**" or "**Final measurement**" at the measuring equipment cabinet. The steering graphics for "**Straight ahead**" will appear on the LCD.

3. Use the "**Forward arrow**" to change to the next measurement image. Display blocks will appear on the LCD with the designation of the measured value and tolerance bar with the measured value. If the measured value is within the tolerance range, it is shown in dark figures against a light background. If the measured value is outside the tolerance range, it will be shown in inverse video (light figures against a dark background).
4. By pressing the "**F**" key shortly, you can move alternately between the designation of the measured value and the setpoint value with the tolerance inside the display blocks.
5. You can scroll through the measured values using the "**Forward arrow**", "**Backward arrow**" and "**Cancel**" (**red dot**) keys. The function of these keys is identical to that of the keys on the graphics panel.
6. Even with "**Free alignment**", it is possible to scroll through the measured values in the same way as with "**Program-guided alignment**".
7. During measurement, the report print-out can be initiated using the "**Printer**" key. The remote control keys are only active during measurement and adjustment (not during customer data input, vehicle selection etc.).

10.3 Display support

- Measured values with a setpoint/actual comparison and tolerance bar (setpoint figures can be displayed with the "**F**" key)
- Steering graphics for steering routines
- Overview of measured values with current setpoint/actual comparison
- Rim run-out compensation
- With all other functions (e.g. customer input), the title illustration appears on the LCD display

NOTE: If the data transmission from the remote control to the computer is interrupted, the remote control icon in the bottom right-hand corner of the screen changes color from green to red and the illustration on the LCD display is shown inversely - black turns to white, white to black. This change does not take place in the title illustration. Once the line-of-sight connection has been re-established, the remote control continues to operate from the point of interruption in the program. A continuous visual connection during alignment is therefore not necessary.

- The "**Hour glass**" icon in the LCD display means: "**Please wait**".
- The "**Battery**" icon in the top right-hand corner of the LCD display means that the battery reserve has been reached.
- To switch off the remote control: press the "**F**" key for 5 seconds, then return it to its charging unit or connect it to a charge cable. The title illustration will again appear as a charging check.
- If, during the measurement, the remote control has been placed back in the charging unit, it must be switched on again using the "**ON**" button.

11. UPDATING THE SOFTWARE / SETPOINT DATA

Floppy disks will no longer be sent to BMW partners who have acquired a "**BMW KDS** (Beissbarth / Bosch)".

For cost-related reasons, you can create these disks yourself on the "**DIS-tester**" or on the "**TIS/EPC server**". The data for this is regularly updated on the TIS CD.

11.1 Requirements

- BMW KDS (Beissbarth / Bosch)
- TIS CD program status (Beissbarth): from CD 12/95
- EPC program status: from 12/95
- TIS CD program status (Bosch): from CD 08/97
- DIS program status: from V6.0
- 3.5" diskettes, 1.44 MB (Beissbarth 5 diskettes / Bosch 1 diskette)

11.2 Procedure (Beissbarth)

1. Go to the "Administration" screen
2. Select the **KDS button**
3. Select **Beissbarth**
4. Insert "**Diskette 1**" on request and confirm with "**OK**" (program diskette 1 of 2 is created, label it)
5. Insert "**Diskette 2**" on request and confirm with "**OK**" (program diskette 2 of 2 is created, label it)
6. Insert "**Diskette 3**" on request and confirm with "**OK**" (setpoint data diskette 1 of 3 is created, label it)
7. Insert "**Diskette 4**" on request and confirm with "**OK**" (setpoint data diskette 2 of 3 is created, label it)
8. Insert "**Diskette 5**" on request and confirm with "**OK**" (setpoint data diskette 3 of 3 is created, label it)
9. Perform update and/or setpoint data on the KDS in the usual manner with the diskettes which have just been created.

11.3 Procedure (Bosch)

1. Go to the "Administration" screen
2. Select the **KDS button**
3. Select **Bosch**
4. Label "**Diskette 3.1**", insert it into the drive on request and confirm with "**OK**" (2x) --> Setpoint data is copied to the diskettes.
5. Insert setpoint data diskette 3.1 into the 3.1 floppy disk drive, insert operating system diskette 3.0 into the 3.0 drive.
6. Switch on the machine in the usual manner.

IMPORTANT: When creating the KDS diskettes, all data on the diskettes used is overwritten.

NOTE: In the event of an error, a corresponding message is shown and the program is cancelled completely. The procedure must be run from the beginning again and all data on the diskette will be deleted. A new diskette may have to be used.

12. CREATING, COPYING AND EDITING SETPOINT DATA

12.1 Copying

- Press the "C " button and select the vehicle to be copied.
- Select the "**Edit setpoint data** " menu item from the special functions. Create a new vehicle in the usual manner. The setpoint values for the last vehicle selected will appear in the data input screen. Enter the data and save the data record.

12.2 Creating

- Press the "C " button and select the "**Edit setpoint data** " menu item from the special functions. Create a new vehicle in the usual manner. An empty data input screen will appear. Enter the data and save the data record.

12.3 Editing

- Factory-programmed setpoint data can neither be deleted nor modified. If this data does need to be modified, a new vehicle with modified setpoint data must be created. New vehicles created by the user are identified by a "+" " in the selection menu. These vehicles can be deleted by the user using the "-" " key or modified using the "<> " key. These keys only appear if vehicles have been entered by the user.

13. SPECIAL FUNCTIONS

13.1 Customer-specific printer report header

The sub-item "**Customer-specific text** " must be called up in the "**Special functions** " menu. An input screen will appear on the monitor. This input screen must be filled out with the name and address and stored with the "S " screen key. The text entered is inserted into the report header.

13.2 Adjusting options

- Call up the "**Service** " menu in the special functions ("S " key).
- Select the "**Wheel toe adjustment** " item or the "**Camber adjustment** " item from the "**Adjustment** " sub-menu. The toe and camber adjustment program will guide the user step by step through the adjustment using text and images. The measuring deviation for each measuring sensor will be shown on the screen when the adjustment has been completed.
- You can store the adjustment values in the measuring sensor using the "**Store** " key or you can quit the program with the "**Red dot key** " without saving them (check). The adjustment values can be printed out.

13.3 Rotating plate test

- Call up the "**Service** " menu in the special functions ("S " key).
- Call up the "**Rotating plate** " item in the "**Service** " menu. Turn the left-hand and right-hand rotating plate and check the display on the screen. Important: The measuring range is ± 306 degrees.

13.4 Viewing and deleting customer entries from database

- Call up the menu item "**Delete**" in the "**Database**" menu in the special functions. The data input screen will appear. Fill in the search fields with the data to be deleted.
- Use the "-" button to delete this data record. A new data record can then be highlighted and deleted with the digital pen.
- You can scroll through the entire database with the "**Arrow up**" and "**Arrow down**" keys.
- You can quit the delete function by pressing the cancel key (red dot).

14. MODIFICATIONS WITHIN PROGRAM

Further modifications were carried out within the program which only slightly change the program sequence but which optimizes the alignment in respect of comfort and speed. This is described below:

- Optimization of the rim run-out compensation in respect of speed.
- Optimization of the steering routines: Highlighted values within the gate can still be corrected. The message "**Rotating plates not connected**" no longer causes the steering routine to be cancelled. Further measurements can be carried out after the rotating plates have been connected.
- Standardization of screen colors with the colors on the tablet.
- Addition of texts in several foreign languages.
- Elimination of program-related and cosmetic faults.
- Electronic water level.
- Omission of kingpin inclination measurement.

15. FAULTS

15.1 Tyre faults

TYRE FAULTS DESCRIPTION CHART

Fault	Effect
1 Wheel toe, camber, toe-differential angle and castor not correct	1 Severe tyre squeaking even at relatively low speeds
2 Excessive toe-in and excessive positive camber	2 Tyres are worn down on one outside edge in the longitudinal direction
3 Excessive negative camber	3 Tyre wear on inside edge
4 Worn front-axle suspension on front-wheel-drive vehicles	4 Increased noise / Vehicle pulls on one side when accelerating
5 Incorrect wheel alignment	5 Wheels scrubbing / Tyre surface shows feathering in the tread
6 Play in the suspension due to mechanical parts (suspension, steering)	6 Washout / Wobbling of front wheels
7 Tyre pressure too low	7 Outside tyre surface wear

15.2 Front axle faults

FRONT AXLE FAULTS DESCRIPTION CHART

Fault	Cause	Remedy
1. Toe deviation	<ul style="list-style-type: none"> a) Vehicle not in normal position b) Tie rod(s) bent c) Tie rod ball joints worn d) Rubber mount in control arm defective 	<ul style="list-style-type: none"> a) Correct height level b) Replace tie rod(s) c) Replace tie rod(s) d) Replace control arm
2. Camber deviation: The camber is fixed during the design stage and cannot be adjusted.	<ul style="list-style-type: none"> a) Rubber mount in control arm defective b) Control arm deformed c) Spring strut deformed d) Traction strut worn e) Spring deflection too great f) Front axle carrier deformed g) Spring strut mount deformed h) Distortion in the floor assembly (engine bracket) 	<ul style="list-style-type: none"> a) Replace control arm b) Replace control arm c) Replace spring strut d) Replace control arm e) Replace coil spring, height level f) Replace front axle carrier g) Repair forward structure h) Repair body
3. Castor deviation: The castor is fixed during the design stage and cannot be adjusted.	<ul style="list-style-type: none"> a) Rubber mount for tension / traction strut defective b) Tension / traction strut deformed c) Control arm deformed d) Spring strut deformed e) Wheelhouse deformed (spring strut mount) f) Distortion in the floor assembly (engine bracket) 	<ul style="list-style-type: none"> a) Replace rubber mount b) Replace tension / traction strut c) Replace control arm d) Replace spring strut e) Repair forward structure f) Repair body
4. Toe-differential angle deviation	<p>Requirement: camber and castor are correct</p> <ul style="list-style-type: none"> a) Tie rods unevenly adjusted 	<ul style="list-style-type: none"> a) Set wheel toe on left and right to identical values
5. Wheel displacement deviation	<p>Requirement: Front wheels have same single toe in relation to the geometrical axis</p> <ul style="list-style-type: none"> a) Front axle carrier deformed b) Engine bracket deformed c) Control arm deformed d) Tension / traction strut deformed 	<ul style="list-style-type: none"> a) Replace front axle carrier b) Repair body c) Replace control arm d) Replace tension /

15.3 Rear axle faults

REAR AXLE FAULTS DESCRIPTION CHART

Fault	Cause	Remedy
1. Camber deviation	a) Vehicle not in normal position: spring deflection too great b) Rubber mount on rear axle carrier defective c) Rear axle carrier deformed d) Control arm deformed e) Traction strut deformed f) Distortion in the floor assembly g) Swinging arm deformed	a) Correct height level b) Replace rubber mount c) Check rear axle carrier and replace, if necessary d) Check control arm and replace, if necessary e) Check traction strut and replace, if necessary f) Repair body g) Replace swinging arm
2. Rear wheel position is not correct	a) Rear axle carrier has been shifted laterally b) Distortion in the floor assembly	a) Check the rubber mounts on the rear axle carrier and replace, if necessary b) Repair body
3. Toe deviation	a) Vehicle not in normal position, i.e. spring deflection too great b) Rubber mount in rear axle carrier defective c) Control arm deformed d) Rubber mount and swinging arm defective e) Rear axle carrier deformed f) Traction strut deformed	a) Correct height level b) Replace rubber mount c) Replace control arm d) Replace swinging arm e) Check rear axle carrier and replace, if necessary f) Check traction strut and replace, if necessary
4. Deviation from the geometrical drive axis	Requirement: Total wheel toe is correct a) Distortion in the floor assembly	a) Repair body

Further details on the "Kinematic Diagnosis System" can be found in the operating instructions for the BMW KDS (Beissbarth / Bosch).

Functional and system descriptions are not subject to change. Parts availability and immediate ordering availability cannot be derived from this information. The specialist departments will be providing further details at the relevant time.

TIRES WITH EMERGENCY RUNNING CHARACTERISTICS AND TIRE PRESSURE WARNING SYSTEMS

All models

GENERAL INFORMATION

Warning systems

BMW AG offers two different systems to warn the driver of a drop in tire pressure.

WARNING SYSTEMS REFERENCE

System	Description	Measuring principle
RDC	Tyre pressure control	Tyre pressure/temperature
RDW	Tyre pressure warning	Comparison of wheel speeds

EMERGENCY RUNNING SYSTEMS

In addition to the warning systems, two emergency running systems are also employed to prevent a depressurized tire from caving in:

Components of emergency running system with self-supporting tires:

EMERGENCY RUNNING SYSTEMS REFERENCE

RDW (standard equipment)	Tyre pressure warning
RDC (available as option from 03/2000)	Tyre pressure control
SST	Self Supporting Tyre
EH2 disc wheel	Disc wheel with Extended Hump 2

Components of emergency running system with integrated support ring:

COMPONENTS OF EMERGENCY RUNNING SYSTEM WITH INTEGRATED SUPPORT RING

Support ring	NOTE: In the future, only for heavy safety vehicles (E38/3)
RDC (optional)	Tyre pressure control
H2 disc wheel	Standard disc wheel with Hump 2

TYRE PRESSURE CONTROL (RDC)

RDC system description

RDC permanently monitors the tire pressure and the temperature in the tires, both while the vehicle is being driven and when it is stationary. Data is transmitted via data telegram by the wheel electronic units to the

antennas installed in the wheel housing and on to the RDC control unit. There, the data received is compared with the stored limit values.

After correcting the air pressure with the engine off and the ignition on, press the Set button and hold (approx. 6 seconds) until the words "Set tire pressure" appear in the instrument cluster (instrument cluster high) or the yellow LED lights up (basic instrument cluster).

If the limit values are exceeded, the driver will be warned via the instrument cluster in two stages, as follows:

LOSS OF TYRE PRESSURE AND WARNING REFERENCE

Loss of tyre pressure	Warning
Drop in tyre pressure of 0.2 to 0.4 bar	Yellow LED on basic instrument cluster or Text: "Check tyre pressure" on instrument cluster high Gong: no
Drop in tyre pressure of more than 0.4 bar	Red LED on basic instrument cluster or Text: "Tyre failure" on instrument cluster high Gong: yes

Advantages of RDC

ADVANTAGES OF RDC

1. Safety	<ul style="list-style-type: none"> ○ early warning in the event of rapid loss of pressure ○ warning of loss of tyre pressure through normal diffusion
2. Comfort	<ul style="list-style-type: none"> ○ unchanging ride comfort ○ instruction to check tyre pressure as necessary
3. Service life, economy	<ul style="list-style-type: none"> ○ minimisation of tyre wear ○ minimisation of fuel consumption
4. New developments	<ul style="list-style-type: none"> ○ allow tyres with emergency running characteristics to be fitted ○ no spare wheel if tyres with emergency running characteristics are fitted (saves weight)

Component description

RDC control unit

Fully diagnosis-compatible

Task:

evaluates the following telegrams from the wheel electronic units:

- tire pressure
- tire air temperature
- identification number (ID) of wheel electronic unit

- remaining service life of wheel electronic unit battery

If required, information or a warning is transmitted.

Fig. 27: RDC Control Unit
Courtesy of BMW OF NORTH AMERICA, INC.

Wheel electronic unit with valve

Components:

- pressure sensor
- temperature sensor
- transmitter
 - frequencies according to country

power supply

- service life: approx. 7 years
- not exchangeable

Fig. 28: Wheel Electronic Unit With Valve
Courtesy of BMW OF NORTH AMERICA, INC.

Installation location of wheel electronic unit in disc wheel

The wheel electronic unit (1) is screwed to the valve (2) on the disc wheel (3)

Identifying feature:

metal tire valves

NOTE: Different valves have to be used to allow for the different disc wheel sizes. The valves are color-coded. The correct coding can be taken from the spare parts catalogue.

Fig. 29: Wheel Electronic Unit, Valve And Disc Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

Antenna

There is an antenna in each wheel housing.

Task:

receives telegrams and forwards these to the RDC control unit.

Fig. 30: Antenna

Courtesy of BMW OF NORTH AMERICA, INC.

COMPONENT DESCRIPTION

Set button

Installed in the instrument panel to the right of the steering wheel. (E46: in the center console)

Symbol: tire cross-section

Task:

initialization after resetting cold tire pressure or after changing tire or wheel location.

Fig. 31: Set Button

Courtesy of BMW OF NORTH AMERICA, INC.

Display element in instrument cluster

Indicator lamp lights up yellow:

- drop in tire pressure of 0.2 to 0.4 bar Indicator lamp lights up red:
- drop in tire pressure greater than 0.4 bar

Fig. 32: Indicator Lamp

Courtesy of BMW OF NORTH AMERICA, INC.

TYRE PRESSURE WARNING RDW

RDW system description

RDW measures the wheel speeds on all four wheels, using the wheel speed sensors of the ABS/ASC or ABS/DSC system. It compares the wheel speeds of the diagonally opposite wheels and of the average speed.

In the event of a drop in tire pressure, the dynamic diameter of a wheel will change, leading to a changed wheel speed.

A drop in tire pressure of $30 \pm 10\%$ can be detected on all wheels from about 15 km/h (10 mph) up to the vehicle's top speed.

If this value is exceeded, the driver will be warned via the instrument cluster as follows:

LOSS OF TYRE PRESSURE AND WARNING REFERENCE

Loss of tyre pressure Warning

Loss of tyre pressure
of $30 \pm 10\%$

Red LED

Text: "Tyre failure"

Gong: yes

The vehicle is not to be driven faster than 80 km/h (50 mph).

NOTE:

A cautious driving style with moderate forward and transverse acceleration will help to prolong the service life of the defective tyre.

ADVANTAGES OF RDW

With two exceptions, the advantages of RDC also apply to RDW.

Exceptions:

- no warning of loss of tire pressure through normal diffusion
- tire pressure still have to be checked regularly, every 14 days

RDW SYSTEM LAYOUT

Fig. 33: RDW System Layout

Courtesy of BMW OF NORTH AMERICA, INC.

COMPONENT DESCRIPTION

RDW control unit

Fully diagnosis-compatible

Task:

- evaluates wheel speeds.
- a warning is transmitted as required.

EMERGENCY RUNNING SYSTEMS

Introduction

Tires with emergency running characteristics can still be used for a certain distance even if they suffer a complete loss of pressure. There are two different systems which meet these requirements:

- emergency running system with self-supporting tires
- emergency running system with integrated support ring

EMERGENCY RUNNING SYSTEMS SETUP

Emergency running system with self-supporting tires

The side walls of the self-supporting tire are reinforced. In conjunction with a special disc wheel, the tire can still be used for a certain distance even if it suffers a complete loss of pressure.

Mobility is retained for the following distances up to a speed of 80 km/h (50 mph) and with a cautious, suitably adapted driving style:

DISTANCES FOR RETAINED MOBILITY

Unloaded vehicle	max. 500 km (300 miles)
Unloaded roadster	less than 250 km (150 miles)
Fully loaded vehicle	max. 50 km (30 miles)

Self-supporting tires demand permanent monitoring of the tire pressure to ensure that the driver is given adequate warning if pressure is lost during a journey. For this reason, these tires are only available in conjunction with the warning system RDW and from 03/2000 also with RDC.

To prevent the self-supporting tires from becoming detached from the disc wheel in the event of a complete loss of tire pressure, they must be fitted to newly developed wheels with modified disc wheel humps, but with

unchanged tire seating (= standard disc wheel).

However, the new wheels can also be used for standard tires of the same size.

COMPARISON STANDARD TIRES / SELF-SUPPORTING TIRES

Standard tires, unpressurized

Fig. 37: Standard Tires, Unpressurized
Courtesy of BMW OF NORTH AMERICA, INC.

Self-supporting tires, unpressurized

Envulcanised reinforcement (1) made of a temperature-resistant rubber compound.

Fig. 38: Identifying Envulcanised Reinforcement
Courtesy of BMW OF NORTH AMERICA, INC.

DISC WHEELS

H2 disc wheel (standard disc wheel) for emergency running system with integrated support ring

1. Hump 2 of standard disc wheel

Fig. 39: Hump 2 Of Standard Disc Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

EH2 disc wheel for emergency running system with self-supporting tire

1. Extended Hump 2 of disc wheel
2. Drop center relocated a few millimeters to the center (precentering on outside)

Fig. 40: Extended Hump 2 Of Disc Wheel
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: The new EH2 disc wheels (extended Hump 2 inner and outer) will be used more frequently on BMW vehicles in the future as they can also help to delay standard tires from being lost in the event of a drop in tire pressure.

Example: from current 1.1 bar to 0.6 bar (X5 or Landrover disc wheel)

Emergency running system with integrated support ring

(In the future, primarily on heavy safety vehicles)

The support ring is made of a high-strength resilient plastic and is fitted on the disc wheel inside the tire. The support ring can only be removed using special tools which have been specially approved by BMW. It can only be removed after destroying the tire.

Emergency running systems with integrated support ring are used in particular on heavy safety vehicles. They allow the vehicle to be driven away from a potential danger without dropping speed even if the tires have suffered a complete loss of pressure (flight situation).

It is possible as an option to have the tire pressure monitored by an RDC system. The RDC is installed by pressing the components into the support ring before it is fitted.

STORING WHEELS AND TIRES

all models

WHEELS / TIRES - GENERAL NOTES

The service of storing a customer's wheels is one which is now almost taken for granted. For this reason, we have published this BMW Technical Service bulletin to provide a uniform storage concept, which will prevent damage being caused due to incorrect storage.

The tire's rubber will age under the influence of sunlight, heat, humidity, movements in the air and ozone, and will thus lose some of its stability and elasticity. For this reason, tires should never be stored in the open-air. If open-air storage cannot be avoided, the wheels / tires must be stored in a clean and dry condition and covered with waterproof material. It is essential that wheels / tires are protected against rain, snow and sunlight, but due to the risk of corrosion they must not be stored in tire sacks.

Wheels / tires with tire pressure control (RDC) must not be cleaned with high-pressure cleaning equipment.

Storage requirements

The following requirements apply in general to storage in enclosed rooms:

STORAGE REQUIREMENTS

cool	15...25 °C / sources of heat screened, or 1 m minimum distance from source of heat
dry	Prevent water and condensation Avoid contact with mineral lubrication products
dark	Protect from direct sunlight and high-UV artificial light
moderate ventilation	Avoid a supply of oxygen and ozone

In short, the storage room should be cool and dry. It is not necessary to heat the room during the winter. In the summer, the doors and windows should be kept closed to ensure that no air can circulate. In addition, the windows can also be coated with sun protection paint.

The storage room should not contain any working electric machinery, welding equipment, distribution boxes etc. as electrical sparks generate ozone which can have a serious impact on the surface of the tire (ozone cracks).

Tires should not be allowed to come into contact with oil, petrol, or other mineral lubricants as these dissolve rubber, making the tire porous.

Preparing wheels / tires

1. Before removing a wheel, mark its position on the vehicle.
2. Whenever possible, keep the tire on its wheel (complete wheels).
3. Correct the inflation pressure and recheck every 2 months.
4. Ensure that tires are stored at a sufficient distance above the ground. Wheels / tires should never be stored on the ground.
5. Complete the storage forms. These should contain the following data:
 - Type and size of tire
 - Condition and tread depth
 - Customer's address
 - Date and signature of customer

Wheel / tire storage requirements

A. Tyre fitted to wheel

Do not store upright,...

NOTE: If storing the wheels upright cannot be avoided, the inflation pressure must be increased to 3.5 bar.

Fig. 45: Precaution For Storing Wheels And Tires - Stack
Courtesy of BMW OF NORTH AMERICA, INC.

B. Tires not fitted

Do not stack,...

Fig. 46: Precaution For Storing Wheels And Tires - Do Not Stack
Courtesy of BMW OF NORTH AMERICA, INC.

... do not hang,...

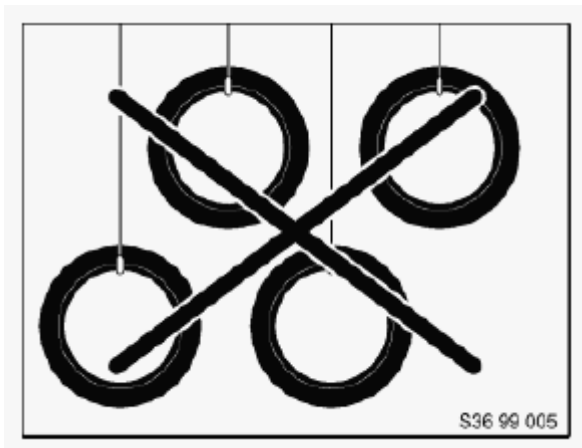

Fig. 47: Precaution For Storing Wheels And Tires - Do Not Hang
Courtesy of BMW OF NORTH AMERICA, INC.

... but rather store them upright and turn them every 4 weeks.

NOTE: **Never store tires on the ground.**
 Use commercially available shelves.

Mounting bracket

Fig. 7: Mounting Bracket (23 0 070)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 080 FIXTURE

Note: For removing 5th gear wheel

Transmission: 265/5, 265/5 Sport, 280/5 Sport

Order number: 23 0 080

Fixture

Consisting of:

23 0 081 Puller jaws (2)

Fig. 8: Fixture (23 0 080)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 090 SUPPORT

In conjunction with: 00 1 450

Note: For ZF and Getrag transmissions

Transmission: 240/5, 260/5, ZF S5-16

Order number: 23 0 090

Support

Fig. 9: Support (23 0 090)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 100 SUPPORT

In conjunction with: 00 1 450

Note: For mounting transmission on assembly stand

Transmission: S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S5D 320Z

SI number: 1 07 90 (244)

Order number: 23 0 100

Support

Fig. 10: Support (23 0 100)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 100 SUPPORT

In conjunction with: 00 2 030

Note: For removing and installing transmission.

Transmission: S6S 420G, S6S 560G

SI number: 1 02 00 (551)

Order number: 23 0 110

Support

Consisting of:

1 = 23 0 111 Take-up support

Note: Transmission: S6S 560G

2 = 23 0 112 Locating bracket (not shown)

Note: Transmission: S6S 420G

In conjunction with: 21 0 111 Take-up support

Fig. 11: Support (23 0 100)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 130 TAKE-UP SUPPORT FOR TRANSMISSION

In conjunction with: 00 2 030

Note: For accommodating transmission during removal and installation.

Series: E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E70, E83, E85, E86, E87, E90, E91, E92, E93

Transmission: GS6-17BG, GS6-37BZ, GS6-37DZ, GS6-53BZ, GS6-53DZ, GS7S47BG, S5D 280Z, S5D 320Z

SI number: 1 06 00 (575)

Order number: 23 0 130

Take-up support for transmission

Consisting of:

1 = 23 0 131 Basic body

2 = 23 0 132 Adjusting unit

3 = 23 0 133 Take-up support

Note: Transmission: S5D 280Z in E53

4 = 23 0 134 Take-up support

Note: Transmission: GS6-37BZ (Htransmission), GS6-17BG (i-transmission)

5 = 23 0 135 Take-up support

Note: Transmission: GS6-37BZ, GS6-53BZ SMG H-SMG

In conjunction with: 23 0 131 / 132, 23 0 134 (front take-up support)

6 = 23 0 136 Take-up support

Note: Transmission: GS6-53BZ, GS6-53DZ

7 = 23 0 137 Take-up support

Note: Transmission: GS6 37BZ, GS6 37DZ (H-transmission) in E87, E90.

In conjunction with: 23 0 131 / 132 / 134 / 136

23 0 138 Take-up support

Note: Transmission: GS6 37DZ (H-transmission) in E83/M47TU.

In conjunction with: 23 0 131 / 132 / 133

Fig. 12: Take-up Support For Transmission (23 0 130)
Courtesy of BMW OF NORTH AMERICA, INC.

23 0 139 Take-up support

Note: Transmission: GS7S47BG in E60/S85 (M5)

In conjunction with: 23 0 131 / 132 / 133

23 0 140 SUPPORT

In conjunction with: 00 2 030

Note: For accommodating transmission during removal and installation. Transmission: F-transmission

Transmission: S5D 320Z, S5D 390Z

SI number: 1 20 98(378)

Order number: 23 0 140

Support

Fig. 13: Support (23 0 140)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 150 SUPPORT

In conjunction with: 00 1 450

Note: For accommodating transmission on assembly stand. For ZF transmission.

Transmission: ZF S5-16

Order number: 23 0 150

Support

Fig. 14: Support (23 0 150)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 160 SUPPORT

In conjunction with: 00 1 450

Note: For Getrag transmission

Transmission: 262/4

Order number: 23 0 160

Support

Fig. 15: Support (23 0 140)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 170 SUPPORT

In conjunction with: 00 1 450

Note: For mounting F-transmission on assembly stand

Transmission: S5D 390Z

SI number: 1 14 99(482)

Order number: 23 0 170

Support

Consisting of:

1 = 23 0 171 Basic body

2 = 23 0 172 Spindle (2)

Note: With handle

Fig. 16: Support (23 0 170)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 180 IMPACT RING WITH SLIP SLEEVE

Minimum set: Mechanical tools

In conjunction with: 23 2 491

Note: For driving in radial shaft seal on drive side - F transmission

Transmission: S5D 390Z

SI number: 1 14 99(482)

Order number: 23 0 180

Impact ring with slip sleeve

Consisting of:

1 = 23 0 181 Impact ring

2 = 23 0 182 Slip sleeve

Fig. 17: Impact Ring With Slip Sleeve (23 0 180)
Courtesy of BMW OF NORTH AMERICA, INC.

23 0 190 IMPACT BUSH

Minimum set: Mechanical tools

Note: For driving in radial shaft seal on output side - F transmission

Transmission: S5D 280Z, S5D 320Z, S5D 390Z

Storage location: B39

SI number: 1 14 99(482)

Order number: 23 0 190

Impact bush

Fig. 18: Impact Bush (23 0 190)
Courtesy of BMW OF NORTH AMERICA, INC.

23 0 200 SOCKET 41 A/F

Minimum set: Mechanical tools

Note: Long version for releasing and tightening down output flange - F-transmission

Transmission: S5D 390Z

SI number: 1 14 99(482)

Order number: 23 0 200

Socket 41 A/F

Fig. 19: Socket 41 A/F (23 0 200)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 250 HOLDER

Minimum set: Mechanical tools

Note: Assistance in releasing and tightening down output flange

Transmission: GS5-39DZ, S5D 280Z, S5D 320Z

Storage location: B41

SI number: 1 06 00(575)

Order number: 23 0 250

Holder

Fig. 20: Holder (23 0 250)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 370 DRIFT

Minimum set: Mechanical tools

Note: For driving in shaft seal on differential on left and right (output shaft).

Transmission: GS6-53BG, GS6-55BG

SI number: 01 23 06 (308)

Order number: 23 0 370

Drift

Fig. 21: Drift (23 0 370)

Courtesy of BMW OF NORTH AMERICA, INC.

23 0 490 EXTRACTOR

Note: For removing shaft seal

Series: E34, E34tou, E36, E36/2, E36/3, E36/5, E36/7, E36/C, E36tou, E39, E39PL, E39tou, E46, E46/16, E46/2, E46/3, E46/5, E46/C, E53, E60, E61, E63, E64, E70, E83, E85, E87, E90, E91, E92, R50, R52

Transmission: GS5-39DZ, GS5-65BH, GS6-17BG, GS7S47BG, S5D 200G, S5D 250G, S5D 260Z, S5D 280Z, S5D 310Z, S5D 320Z, S5D 390Z, S6S 420G, S6S 560G

Storage location: B6, C6

SI number: 1 15 96 (106)

Order number: 23 0 490

Extractor

Consisting of:

1 = 23 0 491 Rod

Note: With self-tapping screw

2 = 23 0 492 Impact weight

Fig. 22: Extractor (23 0 490)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 000 FIXTURE

Note: For pressing-on transmission casing and deep groove ball bearing on transmission input shaft and in transmission casing

Transmission: 240/5, 242/4, 245/5, 245/5Sport, 260/5, 262/4, 265/5, 265/5Sport, 280/5Sport, 3 HP 12, 3 HP 20,

3 HP 22, 4 HP 22, 4 HP 24, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 440Z, A5S 560Z, BW 65, S5D 260Z

Storage location: C15, C16

Order number: 23 1 000

Fixture

Consisting of:

1 = 23 1 001 Sleeve

2 = 23 1 002 Dowel pin (2 x)

3 = 23 1 003 Thrust piece, long

4 = 23 1 004 Thrust piece, short

5 = 23 1 005 Handle

7 = 23 1 007 Thrust piece for Getrag transmissions

Fig. 23: Fixture (23 1 000)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 010 FITURE FOR REMOVING REAR SECTION OF TRANSMISSION CASING

Transmission: 280/5 Sport

Order number: 23 1 010

Fixture for removing rear section of transmission casing

Fig. 24: Fixture For Removing Rear Section Of Transmission Casing (23 1 010)
Courtesy of BMW OF NORTH AMERICA, INC.

23 1 020 FIXTURE FOR REMOVING TRANSMISSION CASING (FRONT AND REAR SECTION)

In conjunction with: 33 1 301

Transmission: 245/5 Sport

Storage location: C32

Order number: 23 1 020

Fixture for removing transmission casing (front and rear section)

Fig. 25: Fixture For Removing Transmission Casing (23 1 020)
Courtesy of BMW OF NORTH AMERICA, INC.

23 1 030 DRIFT FOR FITTING INNER BEARING RACE ON COUNTERSHAFT

Transmission: 245/5, 265/5

Storage location: C22

Order number: 23 1 030

Drift for fitting inner bearing race on countershaft

Fig. 26: Drift For Fitting Inner Bearing Race On Countershaft (23 1 030)
Courtesy of BMW OF NORTH AMERICA, INC.

23 1 040 DRIFT

Note: For mounting sliding section (5th gear) and driving water pipe out of crankcase Engine: N73

Transmission: 245/5Sport, S5D 200G, S5D 250G

Storage location: C23

Order number: 23 1 040

Drift

Fig. 27: Drift (23 1 040)
Courtesy of BMW OF NORTH AMERICA, INC.

23 1 050 PULLER (KUKKO)

Note: For 5th gear as well as reverse gear wheel

Transmission: 240/5, 245/5, 260/5, 265/5Sport, 280/5Sport, S5D 260Z, S5D 310Z, S5D 320Z, ZF S5 -16

Order number: 23 1 050

Puller (Kukko)

Consisting of:

1 = 23 1 051 Claw

23 1 060 FIXTURE

In conjunction with: 33 1 301

Note: For removing inner bearing race - reverse gear wheel

Transmission: 245/5, 265/5 Sport

Storage location: B20

Order number: 23 1 060

Fixture

Consisting of:

1 = 23 1 061 Shells (2)

2 = 23 1 062 Threaded ring

3 = 23 1 063 Holding sleeve

Fig. 28: Fixture (23 1 060)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 070 MEASURING RING

Note: For determining shim ring between outer bearing race and circlip of countershaft

Transmission: 245/5

Storage location: B28

Order number: 23 1 070

Measuring ring

Fig. 29: Measuring Ring (23 1 070)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 080 DRIFT

In conjunction with: 00 5 500

Note: For removing and installing outer bearing race in front section of transmission casing/centre section of countershaft and of ball bearing in rear section of transmission casing, input shaft

Transmission: 245/5, 265/5

Storage location: A28

Order number: 23 1 080

Drift

Fig. 30: Fixture (23 1 060)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 090 DRIFT

In conjunction with: 00 5 500

Note: For removing and installing outer bearing race of input shaft in front section of transmission casing

Transmission: 245/5, 265/5, GS5-65BH

Storage location: A28

Order number: 23 1 090

Drift

Fig. 31: Drift (23 1 090)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 100 PULLER CLAWS

In conjunction with: 00 7 500

Note: For speedometer gear

Transmission: 245/5, 265/5, 280/5Sport

Storage location: B29

Order number: 23 1 100

Puller claws

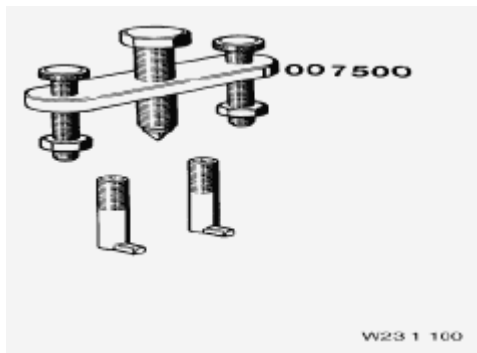

Fig. 32: Puller Claws (23 1 100)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 110 DRIFT

In conjunction with: 00 5 500

Note: For installing bearing of output shaft in rear section of transmission casing

Transmission: 245/5

Storage location: A28

Order number: 23 1 110

Drift

Fig. 33: Drift (23 1 110)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 120 DRIFT

In conjunction with: 00 5 500

Note: For removing outer bearing race of countershaft in centre section of transmission casing

Transmission: 240/5, 245/5, 260/5, 280/5Sport, ZF S5-16

Storage location: A29

Order number: 23 1 120

Drift

Fig. 34: Drift (23 1 120)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 130 DRIFT

Note: For removing bearing of input shaft and roller bearing in centre section of transmission casing

Transmission: 245/5, 280/5Sport

Storage location: A29

Order number: 23 1 130

Drift

Fig. 35: Drift (23 1 130)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 170 FIXTURE

Note: For removing front section of transmission casing

Transmission: 265/5

Order number: 23 1 170

Fixture

Consisting of:

1 = 23 1 171 Plate

2 = 23 1 172 Knurled screw (3)

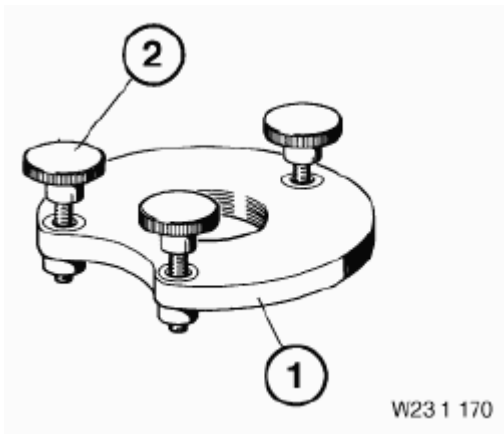

Fig. 36: Fixture (23 1 170)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 180 DRIFT

In conjunction with: 00 0 500

Note: For fitting rotary shaft seal in guide tube of clutch release mechanism

Transmission: 260/5, 265/5, 265/5Sport, 280/5Sport

Storage location: A29

Order number: 23 1 180

Drift

Fig. 37: Drift (23 1 180)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 190 DRIFT

In conjunction with: 00 5 500

Note: For removing and installing ball bearing of input shaft in front section of transmission casing

Transmission: 265/5, 280/5 Sport

Order number: 23 1 190

Drift

Fig. 38: Drift (23 1 190)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 200 GUIDE BUSH

In conjunction with: 23 1 210

Note: For centering wrench socket when releasing and tightening transmission output flange and input flange of rear axle differential

Transmission: 265/5

Storage location: B30

Order number: 23 1 200

Guide bush

Fig. 39: Guide Bush (23 1 200)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 220 DRIFT

In conjunction with: 00 5 500

Note: For removing and installing roller bearing of countershaft shaft in front section of transmission casing

Transmission: 260/5, 265/5, A5S 310Z

Storage location: A29

Order number: 23 1 220

Drift

Fig. 40: Drift (23 1 220)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 230 SPINDLE (2)

In conjunction with: 00 7 500

Note: For removing inner bearing race from input shaft in front section of transmission casing

Transmission: 265/5

Order number: 23 1 230

Spindle (2)

Fig. 41: Spindle (23 1 230)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 240 DRIFT

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal on gearshift shaft

Transmission: 240/5, 242/4, 245/5, 245/5Sport, 260/5, 262/4, 265/5, 265/5Sport, 280/5Sport, 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 440Z, A5S 560Z, BW 65, S5D 200G, S5D 250G, S6S 420G, ZF S5-16

Storage location: A20

Order number: 23 1 240

Drift

Fig. 42: Drift (23 1 240)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 270 DRIFT

In conjunction with: 00 5 500

Note: For removing outer bearing race on countershaft in front section of transmission casing as well as for removing seal and needle bearing from oil pump housing (A5S 560Z)

Transmission: 240/5, 260/5, A5S 560Z

Storage location: A29

Order number: 23 1 270

Drift

Fig. 43: Drift (23 1 270)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 300 FIXTURE

Minimum set: Mechanical tools

In conjunction with: 23 2 150

Note: For fitting output flange on all manual and automatic transmissions, for installing deep groove ball bearing on transmission output shafts and for fitting input flange on all rear axle differentials

Series: E36, E36/2, E36/3, E36/5, E36/7, E36/C, E38, E39, E46, E52, E53, E60, E61, E63, E64, E65, E66, E67, E83, E85, E86, E87, E90, E91, E92

Transmission: HAG 188kom, HAG 220kom, HAG 225kom, HAG Type G, HAG Type K, HAG Type M, S5D 200G, S5D 250G

Storage location: B15, B16

Order number: 23 1 300

Fixture

Consisting of:

1 = 23 1 301 Adapter

2 = 23 1 302 Support disk

Note: For pressing drive flange onto rear differential

In conjunction with: 33 1 341, 23 1 300

3 = 23 1 303 Mandrel

Fig. 44: Fixture (23 1 300)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 310 TOOL

Note: For fitting locking device on deflection lever

Transmission: 280/5 Sport

Order number: 23 1 310

Tool

Fig. 45: Tool (23 1 310)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 350 PULLER FIXTURE

In conjunction with: 33 1 301

Note: For rear section of transmission casing

Transmission: 265/5

Order number: 23 1 350

Puller fixture

Consisting of:

1 = 23 1 351 Plate

2 = 23 1 352 Screw, short (2)

3 = 23 1 353 Screw, long (2)

Fig. 46: Puller Fixture (23 1 350)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 360 DRIFT

In conjunction with: 00 5 500

Note: For fitting rotary shaft seal on transmission input shaft

Transmission: 240/5, 245/5, 262/4, ZF S5-16

Storage location: A35

Order number: 23 1 360

Drift

Fig. 47: Drift (23 1 360)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 370 DRIFT

Note: For fitting rotary shaft seals on transmission output flanges

Transmission: 242/4, 262/4, 265/5, 265/5Sport

Storage location: B28

Order number: 23 1 370

Drift

Fig. 48: Drift (23 1 370)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 380 DRIFT

In conjunction with: 00 0 500

Note: For installing roller bearing of countershaft shaft in rear section of transmission casing

Transmission: 240/5, 245/5, 260/5, 280/5Sport

Storage location: B30

Order number: 23 1 380

Drift

Fig. 49: Drift (23 1 380)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 390 DRIFT

In conjunction with: 00 5 500

Note: For installing roller bearing of countershaft shaft in rear section of transmission casing

Transmission: 265/5, 280/5 Sport

Storage location: A29

Order number: 23 1 390

Drift

Fig. 50: Drift (23 1 390)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 400 FIXTURE

Note: For fitting rotary shaft seal in bush of speedometer pinion

Transmission: 242/4, 262/4

Order number: 23 1 400

Fixture

Consisting of:

1 = 23 1 401 Fitting shaft

2 = 23 1 402 Radial plug

3 = 23 1 403 Union sleeve

Fig. 51: Fixture (23 1 40)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 410 DRIFT

In conjunction with: 00 5 500

Note: For fitting ball bearing of output shaft in rear section of transmission casing and roller bearing of output shaft in centre section of transmission casing

Transmission: 260/5, 265/5

Storage location: A29

Order number: 23 1 410

Drift

Fig. 52: Drift (23 1 410)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 420 FIXTURE

In conjunction with: 33 1 301

Note: For removing slide (5th gear)

Transmission: 265/5

Storage location: C31

Order number: 23 1 420

Fixture

Consisting of:

23 1 421 Clamping screw

Fig. 53: Fixture (23 1 420)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 430 THRUST PIECE

Note: For fitting 5th gear wheel

Transmission: 265/5, 280/5 Sport

Storage location: A35

Order number: 23 1 430

Thrust piece

Fig. 54: Thrust Piece (23 1 430)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 440 HOLDING SLEEVE

Note: For fitting bearing bush and inner bearing race on output shaft as well as for removing bearing on output shaft (S5D 310Z)

Transmission: 265/5, 265/5Sport, 280/5Sport, S5D 310Z

Storage location: C22, C23

Order number: 23 1 440

Holding sleeve

Fig. 55: Holding Sleeve (23 1 440)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 450 GUIDE PINS (2 X)

Note: For fitting bearing bush in locking device of guide sleeve

Transmission: 245/5, 265/5

Storage location: C3

Order number: 23 1 450

Guide pins (2 x)

Fig. 56: Guide Pins (2 X) (23 1 450)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 460 PULLER PLATE

In conjunction with: 33 1 301

Note: For front section of transmission casing

Transmission: 260/5, 280/5Sport, ZF S5-16

Storage location: A27

Order number: 23 1 460

Puller plate

Fig. 57: Puller Plate (23 1 460)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 480 DRIFT

In conjunction with: 00 5 500

Note: For removing and installing deep groove ball bearing in front section of transmission casing

Transmission: 240/5, 242/4, 260/5, 280/5Sport

Storage location: A29

Order number: 23 1 480

Drift

Fig. 58: Drift (23 1 480)

Courtesy of BMW OF NORTH AMERICA, INC.

23 1 490 FIXTURE

Note: For removing gear wheels

Transmission: 240/5, 260/5, 280/5Sport, S5D 200G, ZF S5-16

Order number: 23 1 490

Fixture

Consisting of:

23 1 491 Spacer

Fig. 59: Fixture (23 1 490)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 000 RILLEX BALL BEARING EXTRACTOR 6206

Note: 9 balls with steel cage - for removing deep groove ball bearing of transmission input shaft

Order number: 23 2 000

Rillex ball bearing extractor 6206

Consisting of:

1 = 23 2 001 Claw for Rillex 6206 (9 x)

2 = 23 2 002 Union sleeve

3 = 23 2 003 Pressure spindle

Fig. 60: Rillex Ball Bearing Extractor 6206 (23 2 000)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 010 RELLEX BALL BEARING EXTRACTOR 6206 E

Note: 8 balls with plastic cage - for removing deep groove ball bearing of transmission input shaft

Transmission: 242/4, 245/5Sport, 265/5

Order number: 23 2 010

Rillex ball bearing extractor 6206 E

Consisting of:

1 = 23 2 011 Claw for Rillex 6206 E (8)

2 = 23 2 012 Union sleeve

3 = 23 2 013 Pressure spindle

Fig. 61: Rellex Ball Bearing Extractor 6206 E (23 2 010)
 Courtesy of BMW OF NORTH AMERICA, INC.

23 2 020 RILLEX BALL BEARING EXTRACTOR

Note: 7 balls - for removing deep groove ball bearing of transmission input shaft

Transmission: 245/5 Sport, 265/5 Sport

Order number: 23 2 020

Rillex ball bearing extractor

Consisting of:

1 = 23 2 021 Claw for Rillex (7)

2 = 23 2 022 Union sleeve

3 = 23 2 023 Pressure spindle

Fig. 62: Rillex Ball Bearing Extractor (23 2 020)
 Courtesy of BMW OF NORTH AMERICA, INC.

23 2 050 RILLEX BALL BEARING EXTRACTOR 6205

Note: For removing deep groove ball bearing of transmission countershaft and transmission output shaft

Transmission: 245/5 Sport, 262/4, 265/5 Sport

Order number: 23 2 050

Rillex ball bearing extractor 6205

Consisting of:

1 = 23 2 051 Claw for Rillex 6305 (8)

2 = 23 2 052 Union sleeve

3 = 23 2 053 Pressure spindle

Fig. 63: Rillex Ball Bearing Extractor 6205 (23 2 050)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 060 RILLEX BALL BEARING EXTRACTOR 6306

Note: For removing deep groove ball bearing of input and output shaft

Transmission: 242/4, 262/4

Order number: 23 2 060

Rillex ball bearing extractor 6306

Consisting of:

1 = 23 2 061 Claw for Rillex 6306 (8)

2 = 23 2 062 Union sleeve

3 = 23 2 063 Pressure spindle

Fig. 64: Rillex Ball Bearing Extractor 6306 (23 2 060)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 080 ADAPTER

Note: For removing guide sleeve - 2nd/3rd gear

Transmission: 260/5

Storage location: C21

Order number: 23 2 080

Adapter

Fig. 65: Adapter (23 2 080)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 100 PLIERS

Note: For removing and installing circlip on transmission output shaft

Transmission: 240/5, 242/4, 245/5, 245/5Sport, 260/5, 262/4, 265/5, 265/5Sport, 280/5Sport, 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 440Z, A5S 560Z, BW 65, S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S6S 420G, S6S 560G, ZF S5-16

Order number: 23 2 100

Pliers

Fig. 66: Pliers (23 2 100)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 150 PRESSURE SLEEVE

In conjunction with: 23 1 300

Note: For fitting deep groove ball bearing of transmission output shaft (260/5, 245/5), for fitting front tapered roller bearing on drive pinion in all rear axle differentials as well as for mounting cover of countershaft (S5D 310Z)

Transmission: 245/5Sport, 260/5, S5D 260Z, S5D 310Z, S5D 320Z

Storage location: B29

Order number: 23 2 150

Pressure sleeve

Fig. 67: Pressure Sleeve (23 2 150)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 160 IMPACT BUSH

Note: For rotary shaft seal in rear section of transmission housing - output shaft

Transmission: 280/5Sport, ZF S5-16

Storage location: B28

Order number: 23 2 160

Impact bush

Fig. 68: Impact Bush (23 2 160)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 170 FIXTURE

Note: For tensioning transmission leaf spring

Transmission: ZF S5-16

Order number: 23 2 170

Fixture

Fig. 69: Fixture (23 2 170)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 180 GUIDE BUSH

Note: For mounting front section of transmission casing on selector shaft

Transmission: ZF S5-16

Order number: 23 2 180

Guide bush

Fig. 70: Guide Bush (23 2 180)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 200 CIRCLIP PLIERS (STRAIGHT)

Note: For removing and installing external circlips on transmission shafts

Transmission: 240/5, 242/4, 245/5, 245/5Sport, 260/5, 262/4, 265/5, 265/5Sport, 280/5Sport, 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 440Z, A5S 560Z, BW 65, S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S6S 420G, S6S 560G, ZF S5-16

Order number: 23 2 200

Circlip pliers (straight)

Fig. 71: Circlip Pliers (Straight) (23 2 200)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 210 CIRCLIP PLIERS (STRAIGHT)

Note: For removing and installing internal circlips in transmission casings when replacing deep groove ball bearings

Transmission: 240/5, 242/4, 245/5, 245/5Sport, 260/5, 262/4, 265/5, 265/5Sport, 280/5Sport, 3 HP 12, 3 HP 20, 3 HP 22, 4 HP 22, 4 HP 24, A4S 270R, A4S 310R, A5S 300J, A5S 310Z, A5S 440Z, A5S 560Z, BW 65, S5D 200G, S5D 250G, S5D 260Z, S5D 310Z, S6S 420G, S6S 560G, ZF S5-16

Order number: 23 2 210

Circlip pliers (straight)

Fig. 72: Circlip Pliers (Straight) (23 2 210)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 220 DRIFT

Note: For bearing of countershaft shaft in front and rear section of transmission casing

Transmission: ZF S5-16

Order number: 23 2 220

Drift

Fig. 73: Drift (23 2 220)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 230 DISC

In conjunction with: 00 7 500

Note: For removing guide sleeve from gear wheel or output shaft with toothed lock washer

Transmission: 280/5 Sport

Order number: 23 2 230

Disc

Fig. 74: Disc (23 2 230)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 250 BRACKET

Note: For tensioning main shaft to countershaft

Transmission: S5D 310Z

Storage location: C20, C24

SI number: 1 07 90(244)

Order number: 23 2 250

Bracket

Fig. 75: Bracket (23 2 250)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 260 INSTALLATION DRIFT

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal on selector shaft of rear section of transmission casing

Transmission: S5D 310Z

Storage location: A20

SI number: 1 07 90(244)

Order number: 23 2 260

Installation drift

W23 2 260

Fig. 76: Installation Drift (23 2 260)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 270 FIXTURE

Note: For centering selector shaft while mounting front section of transmission casing

Transmission: S5D 310Z

Storage location: C30

SI number: 1 07 90(244)

Order number: 23 2 270

Fixture

Fig. 77: Fixture (23 2 270)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 280 PULLER PLATE

In conjunction with: 33 1 301

Note: For front section of transmission casing

Transmission: S5D 310Z

Storage location: C31

SI number: 1 07 90(244)

Order number: 23 2 280

Puller plate

W23 2 280

Fig. 78: Puller Plate (23 2 280)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 290 FIXTURE

Note: For mounting front section of transmission casing

Transmission: S5D 310Z

Storage location: C18

SI number: 1 07 90(244)

Order number: 23 2 290

Fixture

Consisting of:

1 = 23 2 291 Base frame

2 = 23 2 292 Support

3 = 23 2 293 Ring

4 = 23 2 294 Set of shells

Fig. 79: Fixture (23 2 290)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 300 DRIFT

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal of output shaft in rear section of transmission casing

Transmission: S5D 310Z

Storage location: B28

SI number: 1 07 90(244)

Order number: 23 2 300

Drift

W23 2 300

Fig. 80: Drift (23 2 300)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 310 FIXTURE

Note: For removing 3rd and 4th gear wheel from countershaft

Transmission: S5D 310Z

Storage location: C30

SI number: 1 07 90(244)

Order number: 23 2 310

Fixture

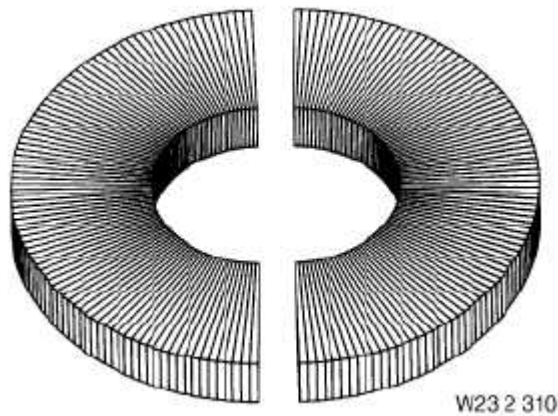

Fig. 81: Fixture (23 2 310)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 320 SOCKET FOR SOCKET WRENCH WAF 36

Minimum set: Mechanical tools

Note: For loosening and tightening flanged nut

Transmission: S5D 310Z, S6S 420G, S6S 560G

Storage location: B30

SI number: 1 07 90(244)

Order number: 23 2 320

Socket for socket wrench WAF 36

Fig. 82: Socket For Socket Wrench WAF 36 (23 2 320)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 330 FIXTURE

Note: For installing complete gear train in rear section of transmission housing

Transmission: S5D 310Z

Storage location: C18

SI number: 1 07 90(244)

Order number: 23 2 330

Fixture

W23 2 330

Fig. 83: Fixture (23 2 330)
Courtesy of BMW OF NORTH AMERICA, INC.

23 2 340 DRIFT

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal in front section of transmission casing

Transmission: S5D 310Z

Storage location: B29, C29

SI number: 1 07 90(244)

Order number: 23 2 340

Drift

W23 2 340

Fig. 84: Drift (23 2 340)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 350 DRIFT

Note: For fitting sealing cover for notch pin of selector shaft

Transmission: S5D 310Z

Storage location: B14, C14

SI number: 1 07 90(244)

Order number: 23 2 350

Drift

W23 2 350

23 2 370 FIXTURE

In conjunction with: 23 1 050

Note: For removing gear train

Transmission: S5D 310Z

Storage location: C30

SI number: 1 02 91(330)

Order number: 23 2 370

Fixture

Fig. 87: Fixture (23 2 370)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 380 INSTALLATION SLEEVE

Note: For retaining ring on input shaft

Transmission: S5D 310Z

Storage location: A5

SI number: 1 02 91(330)

Order number: 23 2 380

Installation sleeve

Fig. 88: Installation Sleeve (23 2 380)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 460 INSTALLATION SLEEVE

Note: For retaining ring on input shaft

Transmission: S5D 200G, S5D 250G

Storage location: A6

SI number: 1 02 91(330)

Order number: 23 2 460

Installation sleeve

Fig. 89: Installation Sleeve (23 2 460)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 470 IMPACT BUSH

Note: For fitting tab washer of securing nut on output flange

Transmission: S6S 420G, S6S 560G

Storage location: A25

SI number: 1 10 93(689)

Order number: 23 2 470

Impact bush

Fig. 90: Impact Bush (23 2 470)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 480 IMPACT BUSH

Note: For installing radial seal on output shaft

Transmission: S6S 420G, S6S 560G

Storage location: A19

SI number: 1 10 93(689)

Order number: 23 2 480

Impact bush

Fig. 91: Impact Bush (23 2 480)

Courtesy of BMW OF NORTH AMERICA, INC.

23 2 490 IMPACT BUSH AND SLIP SLEEVE

Minimum set: Mechanical tools

Note: For fitting rotary shaft seal on input shaft

Transmission: GS5-65BH, S6S 420G, S6S 560G

Storage location: C29

SI number: 1 10 93(689)

Order number: 23 2 490

Impact bush and slip sleeve

Consisting of:

1 = 23 2 491 Impact bush

2 = 23 2 492 Slip sleeve (2-part)

Fig. 92: Impact Bush And Slip Sleeve (23 2 490)
Courtesy of BMW OF NORTH AMERICA, INC.

23 3 010 FIXTURE

Note: For fitting output flange on output shaft

Transmission: S6S 420G, S6S 560G

Storage location: A26

SI number: 1 10 93(689)

Order number: 23 3 010

Fixture

Consisting of:

1 = 23 3 011 Adapter spindle

2 = 23 3 012 Pressure sleeve

3 = 23 3 013 Pressure nut with bearing

Fig. 93: Fixture (23 3 010)

Courtesy of BMW OF NORTH AMERICA, INC.

23 3 020 MOUNTING SLEEVE

Note: For installing gaiter of selector rod

Transmission: S6S 560G

Storage location: A14, B14

SI number: 1 10 93(689)

Order number: 23 3 020

Mounting sleeve

Fig. 94: Mounting Sleeve (23 3 020)

Courtesy of BMW OF NORTH AMERICA, INC.

23 3 110 DRIFT

Note: For driving in guide bushings for catch pins on manual transmissions.

Transmission: GS5-39DZ, S5D 280Z, S5D 320Z, S5D 390Z

SI number: 1 12 02 (918)

Order number: 23 3 110

Drift

Fig. 95: Drift (23 3 110)

Courtesy of BMW OF NORTH AMERICA, INC.

23 3 160 SET OF TOOLS

Minimum set: Mechanical tools

Note: Removing and installing shaft seal on output shaft

Transmission: GS6-37BZ, GS6-51BZ

SI number: 01 10 02 (907)

Order number: 23 3 160

Set of tools

Consisting of:

1 = 23 3 161 Extractor

2 = 23 3 162 Drift

Fig. 96: Set Of Tools (23 3 160)
Courtesy of BMW OF NORTH AMERICA, INC.

23 3 169 SET OF TOOLS

Minimum set: Mechanical tools

Note: Removing and installing shaft seals on output side

Transmission: GS6-37BZ

Order number: 23 3 169

Set of tools

23 3 200 EXTRACTOR

Minimum set: Mechanical tools

Note: For removing shaft seal on drive shaft

Transmission: GS6-53BZ, GS6-53DZ

Storage location: A49, A50

SI number: 1 11 04 (093)

Order number: 23 3 200

Extractor

Fig. 97: Extractor (23 3 200)

Courtesy of BMW OF NORTH AMERICA, INC.

23 3 210 EXTRACTOR

Minimum set: Mechanical tools

Note: For removing shaft seal on output shaft

Transmission: GS6-53BZ, GS6-53DZ

Storage location: A50

SI number: 1 11 04 (093)

Order number: 23 3 210

Extractor

Fig. 98: Extractor (23 3 210)

Courtesy of BMW OF NORTH AMERICA, INC.

23 3 220 DRIFT

Minimum set: Mechanical tools

Note: For driving in shaft seal on drive shaft (G - transmission)

Transmission: GS6-53BZ, GS6-53DZ

Storage location: A49

SI number: 1 11 04 (093)

Order number: 23 3 220

Drift

Fig. 99: Drift (23 3 220)

Courtesy of BMW OF NORTH AMERICA, INC.

23 3 230 DRIFT

Minimum set: Mechanical tools

Note: For driving in shaft seal on output shaft (G - transmission)

Transmission: GS6-53BZ, GS6-53DZ

Storage location: A49

SI number: 1 11 04 (093)

Order number: 23 3 230

Drift

Fig. 100: Drift (23 3 230)

23 4 000 DRIFT SET

Minimum set: Mechanical tools

In conjunction with: 00 5 500

Note: For driving shaft seal into transmission

Transmission: GS6-85BG

Storage location: A49, B84

SI number: 1 02 02(823)

Order number: 23 4 000

Drift set

Consisting of:

1 = 23 4 001 Drift dia. 67 mm

2 = 23 4 002 Drift dia. 53 mm

Fig. 101: Drift Set (23 4 000)

Courtesy of BMW OF NORTH AMERICA, INC.

23 4 010 REMOVAL TOOL

Minimum set: Mechanical tools

Note: For pressing connector out of transmission

Transmission: GS6-85BG

Storage location: B83

SI number: 1 02 02 (823)

Order number: 23 4 010

Removal tool

Fig. 102: Removal Tool (23 4 010)

Courtesy of BMW OF NORTH AMERICA, INC.

23 4 030 FIXTURE

In conjunction with: 23 4 040 Grease gun

Note: For removing and installing guide bearing (pilot bearing) in transmission input shaft.

Transmission: GS6-53DZ

SI number: 01 05 06 (248)

Order number: 23 4 030

Fixture

Consisting of:

1 = 23 4 031 Bridge

2 = 23 4 032 M10x120 screws with nuts (2 x)

3 = 23 4 033 Grease cartridge

4 = 23 4 034 Brass adapter

5 = 23 4 035 Pressure spindle

6 = 23 4 036 Thrust member

Fig. 103: Fixture (24 4 030)

Courtesy of BMW OF NORTH AMERICA, INC.

23 4 040 GREASE GUN

In conjunction with: 23 4 030

Note: For actuating cartridge 23 4 033.

Transmission: GS6-53DZ

SI number: 01 05 06 (248)

Order number: 23 4 040

Grease gun

Fig. 104: Grease Gun (23 4 040)

Courtesy of BMW OF NORTH AMERICA, INC.

23 4 150 UNIVERSAL TRANSMISSION BRACKET

In conjunction with: 00 2 030

Note: Bracket for removing and installing manual and automatic transmissions.

Transmission: GA6F21WA, GS6-53BG, GS6-55BG

SI number: 01 23 06 (308)

Order number: 23 4 150

Universal transmission bracket

Consisting of:

1 = 23 4 151 Joint

2 = 23 4 152 Base frame

3 = 23 4 153 Foam inserts (1 set = 4 pcs.)

4 = 23 4 154 Tensioning strap

5 = 23 4 155 Locator for foam material insert

TECHNICAL DATA - TRANSMISSION GENERAL 260/5 / MECH OVERDRIVE

Oil grade: refer to appropriate article.		
--	--	--

Oil volume	ltr.	1.25
Oil fill quantity for initial fill or replacement transmission	ltr.	1.35

23 00 TRANSMISSION IN GENERAL: 260/5 / MECH SPORT

TECHNICAL DATA - TRANSMISSION GENERAL 260/5 / MECH SPORT

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.25
Oil fill quantity for initial fill or replacement transmission	ltr.	1.35

23 00 TRANSMISSION IN GENERAL: 260/6 / MECH OVERDRIVE

TECHNICAL DATA - TRANSMISSION GENERAL 260/6 / MECH OVERDRIVE

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.25
Oil fill quantity for initial fill or repair transmission	ltr.	1.35

23 00 TRANSMISSION IN GENERAL: 265/5 / MECH SPORT

TECHNICAL DATA - TRANSMISSION GENERAL 265/5 / MECH SPORT

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.5
Oil fill quantity for initial fill or repair transmission	ltr.	1.7

23 00 TRANSMISSION IN GENERAL: 265/6 / MECH OVERDRIVE

TECHNICAL DATA - TRANSMISSION GENERAL 265/6 / MECH OVERDRIVE

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.5
Oil fill quantity for initial fill or repair transmission	ltr.	1.7

23 00 TRANSMISSION IN GENERAL: 280/5 / MECH SPORT

TECHNICAL DATA - TRANSMISSION GENERAL 280/5 / MECH SPORT

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.25
Oil fill quantity for initial fill or repair transmission	ltr.	1.35

23 00 TRANSMISSION IN GENERAL: S6-53DZ / MECH

TECHNICAL DATA - TRANSMISSION GENERAL S6-53DZ / MECH

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.5

Oil fill quantity for initial fill or replacement transmission	ltr.	1.6
--	------	-----

23 00 TRANSMISSION IN GENERAL: ZF-S5-16 / MECH

TECHNICAL DATA - TRANSMISSION GENERAL ZF-S5-16 / MECH

Oil grade: refer to appropriate article.		
Oil volume	ltr.	1.05
Oil fill quantity for initial fill or replacement transmission	ltr.	1.15

23 00 TRANSMISSION, COMPLETE, TRANSMISSION CONFIGURATION B,C,D,E,F,G,H,I,J

TECHNICAL DATA - TRANSMISSION, COMPLETE, TRANSMISSION CONFIGURATION

<p>A letter code is located on the transmission case</p> <ul style="list-style-type: none"> ○ underside of transmission center ○ underside of clutch housing ○ sticker on left side of transmission extension <p>With help of letter code and the appropriate BMW parts microfiche for the vehicle, the transmission model can be established.</p> <p>Example: xxxxxxx = ser. transmission no. AKD = BMW code S 5 D 200 G = transmission variant</p>

23 22 GEARS (LAYSHAFT) ZF-S5-16 / MECH OVERDRIVE

TECHNICAL DATA - GEARS (LAYSHAFT) ZF-S5-16 / MECH OVERDRIVE

Pressing-off force at ambient temperature		
3rd gear wheel	t	7.5

4th gear wheel	t	8.0
5th gear wheel	t	8.0
Contact pressure force at warming temperature		
3rd gear wheel	t °C	- -
4th gear wheel	t °C	- -
5th gear wheel	t °C	- -

23 SYNCHRONIZATION

23 23 SYNCHRONIZATION 240/5 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION 240/5 / MECH OVERDRIVE

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION 260/5 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION 260/5 / MECH OVERDRIVE

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION 260/5 / MECH SPORT

TECHNICAL DATA - SYNCHRONIZATION 260/5 / MECH SPORT

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION 260/6 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION 260/6 / MECH OVERDRIVE

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION 265/5 / MECH SPORT**TECHNICAL DATA - SYNCHRONIZATION 265/5 / MECH SPORT**

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION 265/6 / MECH OVERDRIVE**TECHNICAL DATA - SYNCHRONIZATION 265/6 / MECH OVERDRIVE**

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION 280/5 / MECH SPORT**TECHNICAL DATA - SYNCHRONIZATION 280/5 / MECH SPORT**

Distance between synchronizer ring and clutch body		
New condition	mm	1.0 ... 1.3
Max. wear limit size	mm	0.8
Reverse gear		
New condition	mm	0.5 ... 0.6
Max. wear limit size	mm	0.4

23 23 SYNCHRONIZATION GS6-37BZ/DZ / MECH**TECHNICAL DATA - SYNCHRONIZATION GS6-37BZ/DZ / MECH**

Distance between synchronizer ring and clutch body		
New condition		

1st/2nd gear	mm	1.3 ... 2.05
Wear limit size	mm	1.0
3st/4nd gear	mm	0.8 ... 1.40
Wear limit size	mm	0.7
5/6st gear	mm	0.95 ... 1.5
Wear limit size	mm	0.75
Reverse gear		
New condition	mm	0.65 ... 1.25
Max. wear limit size	mm	0.5

23 23 SYNCHRONIZATION GUIDE SLEEVES 240/5 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 240/5 / MECH OVERDRIVE

Pressing-off force		
1st/2nd and 5th/R gear	t max	3.0
3rd/4th gear	t max	2.7
Pressing-on force		
1st/2nd and 5th/R gear	t max	2.1
3rd/4th gear	t max	1.9
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 260/5 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 260/5 / MECH OVERDRIVE

Pressing-off force		
1st/2nd and 5th/R gear	t max	3.7
3rd/4th gear	t max	3.0
Pressing-on force		
1st/2nd and 5th/R gear	t max	2.5
3rd/4th gear	t max	2.1
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 260/5 / MECH SPORT

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 260/5 / MECH SPORT

Pressing-off force		
1st/2nd and 5th/R gear	t max	3.7
3rd/4th gear	t max	3.0
Pressing-on force		
1st/2nd and 5th/R gear	t max	2.5
3rd/4th gear	t max	2.1
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 260/6 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 260/6 / MECH OVERDRIVE

Pressing-off force		
1st/2nd and 5th/R gear	t max	3.7
3rd/4th gear	t max	3.0
Pressing-on force		
1st/2nd and 5th/R gear	t max	2.5
3rd/4th gear	t max	2.1
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 260/6 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 260/6 / MECH OVERDRIVE

Pressing-off force		
1st/2nd and 5th/R gear	t max	3.7
3rd/4th gear	t max	3.0
Pressing-on force		
1st/2nd and 5th/R gear	t max	2.5
3rd/4th gear	t max	2.1
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 265/5 / MECH SPORT

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 265/5 / MECH SPORT

Pressing-off force		
Pressing-on force		
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 265/6 / MECH OVERDRIVE

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 265/6 / MECH OVERDRIVE

Pressing-off force		
Pressing-on force		
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 280/5 / MECH SPORT

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 280/5 / MECH SPORT

Pressing-off force		
Pressing-on force		
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES 280/5 / MECH SPORT

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES 280/5 / MECH SPORT

Pressing-off force		
Pressing-on force		
Bearing Sleeves	approx. °C	80

23 23 SYNCHRONIZATION GUIDE SLEEVES GS6-37BZ/DZ / MECH

TECHNICAL DATA - SYNCHRONIZATION GUIDE SLEEVES GS6-37BZ/DZ / MECH

1st / 2nd gear	kN	10 ... 36
3rd / 4th gear	kN	20 ... 58
5th / 6th gear	kN	19 ... 55

23 23 SYNCHRONIZATION GUIDE SLEEVES GS6-53DZ / MECH

AUTOMATIC TRANSMISSION

Overview - All Models

STANDARD/AUTOMATIC TRANSMISSION

In today's modern vehicles, the automatic transmission has become a vital part of the powertrain. Automatic transmissions provide overall better fuel economy and efficiency while adapting to changing road conditions and driving habits. Standard transmissions offer more driver interaction with the vehicle, however automatic transmissions reduce driver fatigue and increase safety by shifting automatically. Automatic transmissions also offer improved driveability in stop and go traffic. If there is a disadvantage to an automatic transmission, it would be complexity and cost of manufacturing. See **Fig. 1**.

Standard Transmission

- Drive torque must be interrupted to change gears.
- Higher loads on driveline from abrupt clutch application.
- Clutch must be disengaged when vehicle is stopped to prevent stalling.
- High radial loads on housing.
- Gear set design requires more space than planetary type.
- Requires some Maintenance (clutch).
- Requires driver intervention for shifting.

Automatic Transmission

- Gear teeth are in constant mesh due to planetary design.
- Smoother application of drive torque reduces loads on driveline.
- Due to fluid coupling in the torque converter, transmission can stay in gear when vehicle is stopped.
- Minimal radial loads on housing.
- Compact design of gear set. Space requirement is minimized.
- Maintenance free operation. (Lifetime fluid and no clutch).
- Automatic shifting reduces driver fatigue and increases safety.

HYDRAULIC TRANSMISSION VS. ELECTRO-HYDRAULIC TRANSMISSION

Since the introduction of the automatic transmission there have been numerous refinements to improve shift comfort as well as fuel economy. Early automatic transmissions used only hydraulic control, there was no electronic intervention. In 1986 BMW introduced their first EH (Electro-Hydraulic) transmission into production vehicles. The acronym EGS is used by BMW for its electronic transmission control system. EGS stands for "Electronic Transmission Control" which comes from the German words "Elektronisch Getriebe Steuerung". In order to comply with SAE terminology we will refer to the EGS control module as the TCM "Transmission Control Module". EH controlled transmissions allow for optimized shift points by closely

monitoring changing conditions. Engine speed, road speed and throttle angle are some of the inputs that are monitored by the TCM to determine optimal shift points. The TCM will then process this information and control shift point via electronic solenoids mounted on the valve body. With the introduction of Adaptive Transmission Control, shift comfort and fuel economy was further improved. The TCM now monitors throttle angle deviations, wheel speeds and CAN Bus information to fine tune shift points. See **Fig. 2**.

TRANSMISSION IDENTIFICATION

BMW automatic transmissions are manufactured by two suppliers for the US market:

- Zahnradfabrik Friedrichshafen: Commonly referred to as ZF. ZF manufactures both manual and automatic transmissions.
- GM Powertrain - Hydramatic: Hydramatic is a manufacturing division of General Motors located in Strasbourg France. Hydramatic supplies automatic transmissions to BMW for four and six-cylinder vehicles.

BMW has developed an internal numbering system for their transmissions for parts ordering, information research and identification. Also, each manufacturer uses their own internal identification system. Here is a breakdown of these identification codes. See **Fig. 3**.

TRANSMISSION HYDRAULICS

TRANSMISSION FLUID (OIL)

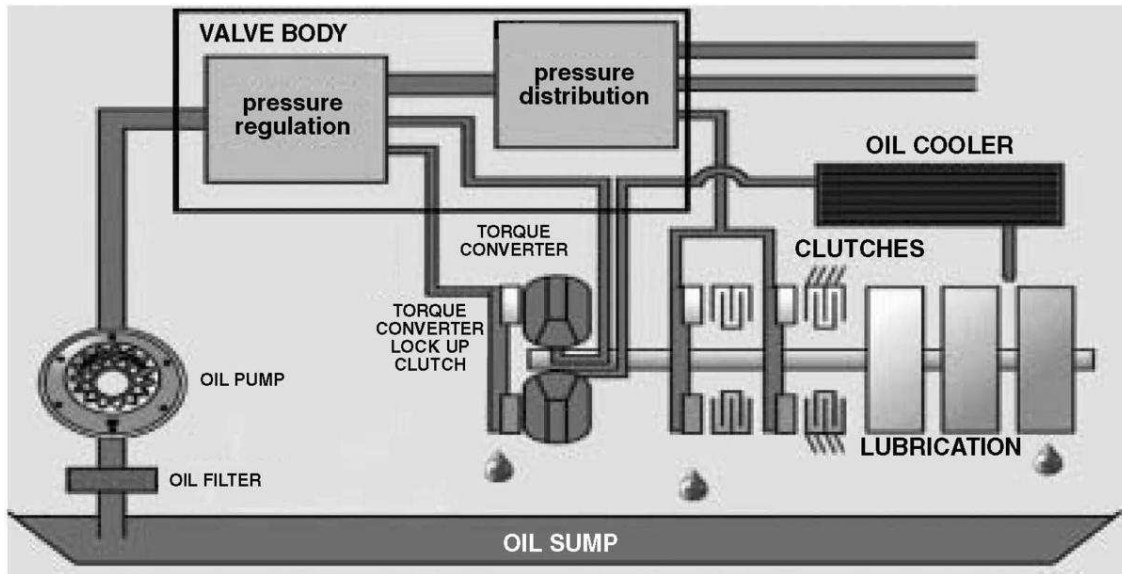

The automatic transmission provides pressure regulated hydraulic fluid which is filtered for all of the transmissions functional requirements. See **Fig. 4**. All BMW automatic transmissions are designed to operate with specific fluids. Use of non-approved oil will cause malfunctions and irreparable transmission damage which is not covered by BMW warranty. The transmission fluid provides the following functions:

- Lubricates mechanical components (planetary gears, bearings etc.).
- Removes heat and transfers heat to transmission cooling system. (heat exchanger).
- Removes debris and contaminants to sump and filter when circulated.
- Provides a transfer of kinetic energy in the torque converter.
- Allows hydraulic operation of mechanical components (clutches, brakes) via control of the valve body.

Also, transmission fluid has various properties to prevent oxidation and breakdown from heat and friction. Each

type of transmission fluid has properties specific for each transmission application. Fluid level is crucial in the proper operation of an automatic transmission. Improper fluid levels will cause improper operation and eventually irreparable transmission damage. Improper fluid level can cause:

- A low fluid level can cause an interruption in oil flow during fast acceleration or hard braking which can cause gear shift malfunctions.
- An excessively high fluid level can cause the rotating mechanical components to paddle in the oil. This produces foam which introduces air into the hydraulic system.
- A low fluid level can also cause transmission overheating causing premature transmission failure.

G00317014

Fig. 4: Identifying Transmission Hydraulics

TRANSMISSION FLUID APPLICATION

There are numerous types of transmission fluid used in BMW transmissions. With the exception of the early transmissions (4HP22/24, A4S310/270R and the A5S310Z) all current BMW transmissions use "Lifetime Fill" transmission fluid. There is no maintenance required for these transmissions. It is important to use the correct fluid. Incorrect use of the transmission fluid can cause non-warrantable transmission damage.

When performing repairs on transmissions with lifetime fluid, it is important to drain the transmission fluid in to a clean container for re-use. New fluid should only be used for transmission replacement and for topping off after repairs.

Also, transmission fluid level is vital to the proper operation of the transmission. See **Fig. 5**.

TORQUE CONVERTER

In standard transmissions the crankshaft is linked to the transmission input shaft via the clutch assembly. Power flows from the crankshaft through the flywheel. The pressure plate transfers power to the clutch disc which is splined to the transmission input shaft. The pressure plate is used to disconnect (or interrupt) power flow to the transmission input shaft. Because the engine is mechanically connected to the driveline, power flow must be interrupted when the vehicle is stationary. Otherwise the engine would stall. In automatic transmissions, there is a fluid coupling between the engine and transmission. This fluid coupling is more commonly referred to as the torque converter. In the torque converter there is no rigid connection between the engine and transmission (except for lock up clutch). In order to understand the operation of the torque converter, we must first start with the components. The breakdown of the components are as follows:

- The Impeller, which is rigidly connected to the torque converter housing.
- The Turbine, which is splined to the input shaft (turbine shaft) of the transmission.
- The Stator, which has a one-way clutch. The inner race of the one-way clutch is splined to a stationary

shaft attached to the transmission. See **Fig. 6**.

The addition of the stator allows the fluid coupling to be referred to as a torque converter. The stator provides for a multiplication of torque at low speeds. Without the stator there would be no multiplication of torque.

Fig. 6: Identifying Impeller, Turbine & Stator
Courtesy of BMW OF NORTH AMERICA, INC.

When the engine is running, the impeller which is directly connected to the converter housing, rotates at engine speed. Fluid is directed from the impeller blades to the turbine blades. The fluid drives the turbine which is splined to the input (turbine) shaft of the transmission. This functions the same way as a waterfall acting on a paddle wheel. The ratio of the impeller speed to turbine speed is approximately 1.1 to 1. This ratio is improved to 1:1 with the addition of the torque converter clutch which is discussed later.

Torque Converter Operation At Low Speeds

1. At low engine speeds there is a large difference in rotational speed between the impeller and the turbine
2. Fluid flow is directed from the impeller to the turbine. Fluid strikes the vanes of the turbine. The turbine is driven forward in the direction of engine rotation.
3. Fluid flow is then directed back towards the impeller.
4. Before the fluid reaches the impeller, the fluid strikes the vanes of the stator.
5. When the fluid strikes the stator, the one way clutch prevents the stator from rotating.
6. The fluid is then re-directed by the curved vanes of the stator. The fluid is now flowing in the same direction as the impeller.
7. The fluid that is acting on the impeller increases the force on the impeller which multiplies torque. See **Fig. 7.**

G00317017

Fig. 7: Torque Converter Operation At Low Speed
Courtesy of BMW OF NORTH AMERICA, INC.

Torque Converter Operation at High Speed

1. As engine speed increases, the turbine speed approaches the speed of the impeller.
2. The fluid flow is directed from the turbine to the back side of the impeller blades.
3. The one-way clutch in the stator unlocks and the stator blades turn in the direction of engine rotation.
4. Fluid is no longer re-directed and torque multiplication no longer takes place.
5. This is referred to as "Coupling Speed". The turbine never reaches the same speed as the impeller as fluid flow would come to a halt. Ratio is approximately 1.1 to 1. See **Fig. 8**.

G00317021

Fig. 8: Torque Converter Operation At High Speed
Courtesy of BMW OF NORTH AMERICA, INC.

Torque Converter Clutch

Since the efficiency of the torque converter at coupling speed is approximately 1.1 to 1, fuel economy is compromised. To offset this a torque converter clutch was added on EH controlled transmissions. The torque converter clutch locks the turbine to the converter housing. This creates a mechanical coupling with a ratio of 1:1. This can only be achieved at higher engine speeds. The torque converter clutch must be disengaged at low engine speeds to prevent stalling. There are two methods for controlling the torque converter clutch on BMW transmissions:

- A4S310/270R, 4HP22/24 EH, A5S310Z - These transmission use an on/off control method to lock and unlock the torque converter. The TCC is either completely engaged or completely disengaged. This method of engagement provides an abrupt sensation when the TCC is locking and unlocking. This abrupt sensation can be unpleasant and undesirable to some drivers.
- A5S560Z, A5S440Z, A5S325Z, GA6HP26Z, A5S360/390R - These transmissions use a gradual approach to TCC control. The TCC is gradually applied and released, this method reduces the abrupt feel of the on/off type TCC. The TCC solenoid is controlled by pulse width modulation. This allows fluid to be gradually introduced and released to the TCC.

The TCC is spring loaded to the engaged position. Pressurized fluid releases the TCC, when the pressurized fluid is released, the TCC is engaged. Depending on transmission application, the TCC can be engaged in 3rd, 4th or 5th gear. The TCC must be disengaged at low speeds to prevent stalling. See **Fig. 9** and **Fig. 10** .

OIL PUMP

The transmission oil pump is used to circulate oil and provide pressure for hydraulic operation. The pump is driven by the torque converter shell and rotates with engine. Fluid is drawn from the sump through the filter and distributed to the various transmission hydraulic systems. The output pressure is regulated to an operating pressure of approximately 25 bar. Currently there are two types of oil pumps used in BMW transmissions: Crescent type and Vane type. See **Fig. 11**.

G00317020

Fig. 11: Locating Oil Pump
Courtesy of BMW OF NORTH AMERICA, INC.

Crescent Type Oil Pump (All except A5S360/390R)

The crescent type is an internal gear pump containing a drive gear and a driven gear. The inner gear is driven by the torque converter and acts as the impeller. The outer gear is driven by the inner gear. The gap between the teeth varies from the input, through the crescent and to the output of the pump. A low pressure area is created on the input side of the pump by the widening gap between the gear teeth. The oil is drawn to the crescent and transferred to the output side of the pump, where the pressure is increased by the narrowing gap between the

gear teeth. The output pressure of the pump is controlled by spring loaded pressure regulator. See **Fig. 12**.

G00317022

Fig. 12: Identifying Crescent Type Oil Pump
Courtesy of BMW OF NORTH AMERICA, INC.

Oil Volume Control

On the A5S440Z transmission, oil pump output volume is controlled based on engine RPM. High oil volume is initially required at start up to quickly fill the transmission requirements. As engine RPM increases, the volume is greater than is required. The Oil Volume Control Damper regulates the pump output volume based on engine RPM. This helps improve fuel economy by reducing the load on the engine at high RPM.

Vane Type Pump (A5S360/390R)

The new A5S360/390R (GM5) transmission uses a vane type pump. See **Fig. 13**. The torque converter drives the pump rotor and 13 vanes. The rotor and vanes are placed inside a slide mechanism. As the rotor spins, the vanes sweep oil from the pump intake to the output along the mating surface on the vane ends and the interior surface of the slide. The slide is mounted on a pivot pin. As it pivots, it changes the eccentricity of the rotor to slide mating surface. This in turn will alter the output oil volume. This provides the same function as the Oil

Control Volume Damper on the A5S440Z. The slide's position is influenced by a calibrated spring and hydraulic control pressure from the main pressure regulator solenoid on the valve body. See **Fig. 14**. The benefit of changing the slide position is to optimize pump output volume to meet the following operating conditions:

- Provide maximum volume during engine start-up. This condition provides a fast priming action of the pump for immediate lubrication and for hydraulic pressure operation.
- Regulated output volume at higher engine speeds. Maximum pump volume is not required at all times.

HYDRAULIC CONTROL COMPONENTS

Electro/Hydraulic Valve Body

The valve body assembly is the main shift control element in the transmission. In non-EH transmissions the valve body was only hydraulically controlled. In the current EH (electrohydraulic) transmissions the valve body is similar in design, but now also housing a number of shift solenoids which are controlled by the TCM. The valve body consists of a number of sub-assemblies. Each sub-assembly contains a number of spool valves which are hydraulically controlled. Most spool valves are opposed by spring pressure. The spool valves are used to direct hydraulic fluid flow to the various shift elements in the transmission. There is also a manual valve which is connected to the shift assembly by a cable. The manual valve allows the drivers to select the basic operating mode (or ratio). See **Fig. 15**. The valve body is responsible for the following:

- Regulating main pressure.

- Controlling fluid flow to shift elements for Upshifts and Downshifts.
- Providing for manual operation by driver via manual valve.
- Reverse Lockout.
- Failsafe Operation.
- Shift Comfort through: Overlap Shift Control (ZF) Pressure Accumulators (GM).
- Torque Converter Control.
- Distribution of lubrication.

- Regulating Main Pressure
- Controlling fluid flow to shift elements for Upshifts and Downshifts.
- Providing for manual operation by driver via manual valve.
- Reverse Lockout
- Failsafe Operation
- Shift Comfort through: Overlap Shift Control (ZF) Pressure Accumulators (GM)
- Torque Converter Control
- Distribution of lubrication.

G00317025

Fig. 15: Identifying Electro/Hydraulic Valve Body Components
 Courtesy of BMW OF NORTH AMERICA, INC.

Shift Valves

Shift valves are used to direct application pressure to the various shift elements. Shift valves are regulated by spring pressure and control pressure for the shift solenoids. Shift valves come in various configurations depending upon application and transmission type. The most basic is the 3/2 shift valve. The 3/2 shift valve has 2 positions which are switched through one or two control pressures.

With no control pressure from shift solenoid present, the shift valve is moved to its end travel (left) by spring pressure. Operating pressure is blocked to the shift component. Also in this position any application pressure is drained from the shift component. See **Fig. 16**.

Once the control pressure is applied to the 3/2 shift valve, the shift valve moves to the right. This allows operating pressure to reach the shift component. When the control pressure is again reduced, spring pressure returns the 3/2 shift valve to the rest position. This drains and operating pressure from the shift component. See **Fig. 17**.

Operating Pressure to Shift Component. The example shown is a 4/2 shift valve. The operation is similar to the 3/2 valve. The primary difference is that the 4/2 shift valve affects 2 shift components. See **Fig. 18**.

Fig. 17: Shift Valve Operation (2 Of 3)
 Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 18: Shift Valve Operation (3 Of 3)

Courtesy of BMW OF NORTH AMERICA, INC.

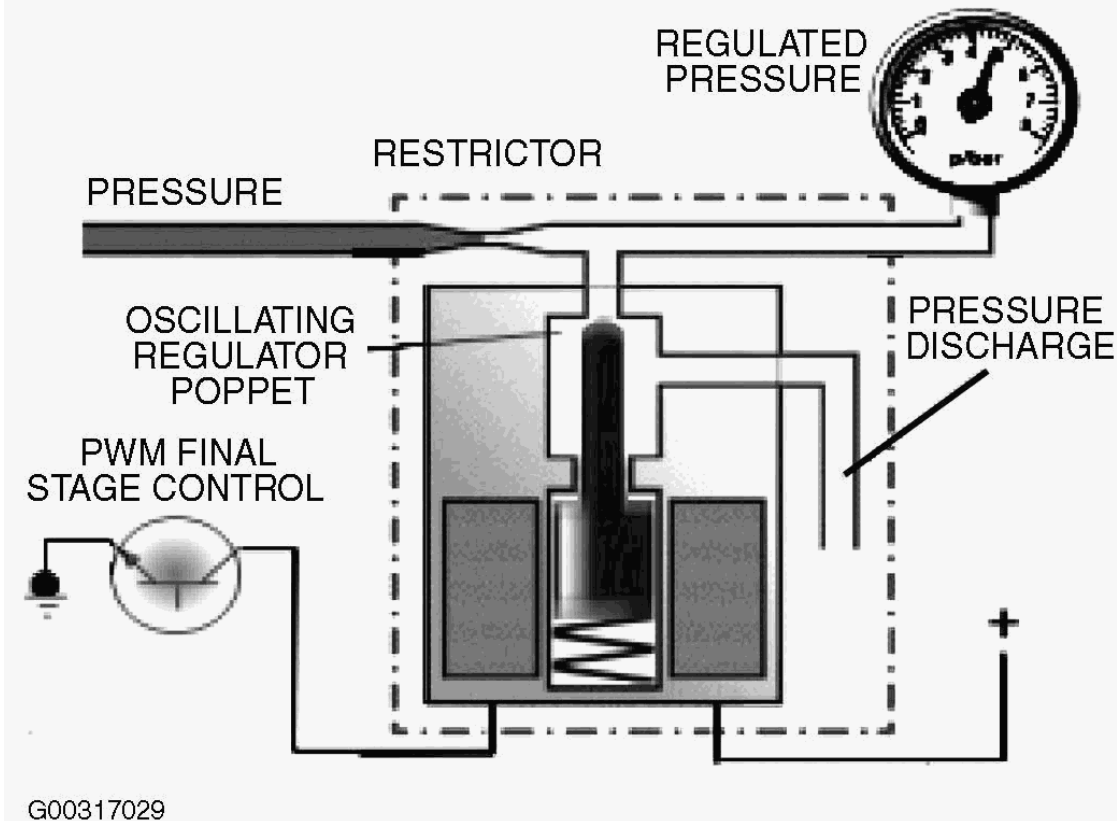

Pressure Regulation

Pressurized oil from the pump must be regulated for use within the transmission. Otherwise, the high pressure directly from the pump would influence shift quality. The shifts would be more abrupt and harsh. In order to "fine tune" the pressures within the transmission, there is a pressure regulating valve and a pressure regulating solenoid. The pressure regulating valve is located in the oil pump housing or the valve body dependent upon transmission type. The pressure regulating solenoid is a pulse width modulated (PWM) solenoid. Current is controlled by the TCM. The pressure regulating solenoid is normally closed, there is maximum line pressure available when minimum (or no) current is applied to the pressure regulating solenoid. Depending upon application, pressure regulating solenoid can be PWM with B- or B+ control. GM transmissions use B+ control with a constant ground supply. ZF transmissions uses B- control with a constant B+ supply.

There are also pressure regulators used in ZF transmissions that are used to control shift pressures. The A5S440Z and A5S560Z both use EDS solenoids for "Overlap Shift Control" this will be explained later in this text. There are a few different names for pressure regulating solenoids depending upon the transmission type and manufacturer:

- ZF transmissions use the following terms - EDS solenoid (valve), or MV (magnetic valve).
- Hydramatic (GM) transmissions use the following terms: DR solenoid, Force Motor Solenoid or Variable Bleed Solenoid.

Transmission operating pressures are regulated based on engine speed, throttle angle and engine load. The regulated pressure from the pressure regulating solenoid is referred to as throttle pressure. This pressure is fed to the main pressure regulating valve. See **Fig. 19**.

G00317029

Fig. 19: Identifying Transmission Operating Pressure
 Courtesy of BMW OF NORTH AMERICA, INC.

Pressure Regulation

As the diagram shows, regulating valve pressure is fed to the pressure regulating solenoid. See **Fig. 20**. This pressure is then regulated to create throttle pressure. Throttle pressure is modified based on throttle angle, engine speed and engine load. Throttle pressure is then fed to the pressure regulating valve. As throttle pressure increases, the regulating valve piston is moved to the left (with respect to the diagram). As the regulating valve piston is moved to the left, operating pressure is increased to the 4/2 shift valve. The operating pressure to the 4/2 shift valve will be fed to Shift Component A or Shift Component B depending the position on the 4/2 shift valve. The operating pressure to the shift components will be increased or decreased depending upon the throttle valve pressure. As engine speed and load are increased, the operating pressure will be increased to provide higher clamping forces on the shift components. When there is no electrical power present to the pressure regulator solenoid, throttle pressure will be a maximum. Therefore maximum operating pressure will be available at the 4/2 shift valve. This condition would exist if the transmission was operating in failsafe mode.

Fig. 20: Identifying Transmission Regulation Pressure
 Courtesy of BMW OF NORTH AMERICA, INC.

APPLY COMPONENTS

Multi - Plate Clutches and Brakes

Multi Plate Clutches and Brakes are used to drive or hold members of the planetary gear set. See **Fig. 21**. As a general rule, Multi Plate Clutches connect one planetary member to another. Multi Plate Brakes connect a planetary member to the case to hold it stationary. The clutches and brakes consist of a number of friction discs and steel discs. The friction discs are coated with a friction material and have engaging lugs (splines) on the inner perimeter. The steel discs are steel on both sides and have engaging lugs located on the outer perimeter. The engaging lugs on the friction discs are usually engaged with a planetary member. The engaging lugs on the steel discs are usually engaged with the clutch piston housing. In addition to the friction and steel discs, there is also an apply piston, housing and return spring. Once hydraulic fluid is applied to the clutch assembly, the friction discs and steel discs will be locked together. Once hydraulic pressure is released, the return spring will cause the clutch piston to return to its rest position which will unlock the clutch assembly. See **Fig. 22**.

Fig. 21: Identifying Multi-Plate Clutches & Brakes
 Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 22: Multi-Plate Clutch Identification
 Courtesy of BMW OF NORTH AMERICA, INC.

Multi - Plate Clutch Operation

In order to carry out a shift in ratio, fluid needs to be applied or released from the Multi - Plate Clutch (or Brake). As shown in the example at the right, the following sequence occurs:

1. Fluid from a shift valve in the valve body is applied to the clutch assembly.
2. Fluid pressure builds behind the apply piston and overcomes the resistance from the diaphragm spring.
3. The friction and steel discs are compressed together and become locked, preventing any slippage between them.
4. Two planetary members are now locked together.
5. When fluid pressure is released, the steel and friction discs are allowed to unlock.
6. The diaphragm spring pushes against the apply piston and returns the piston back to the rest position.
7. The check ball in the apply piston is unseated by centrifugal force which allows the clutch to drain completely. See **Fig. 23**.

Fig. 23: Multi-Plate Clutch Operation
Courtesy of BMW OF NORTH AMERICA, INC.

BAND BRAKES

On some BMW transmissions there is a band type brake used for some applications. The A4S270/310R and the A5S310Z use a band type brake. The brake band is a circular band with friction material bonded to the inner surface. The band wraps around a particular planetary component (clutch drum) and locks that component to the transmission case. The brake band is applied and released by the clutch apply piston. The brake band is not

adjustable on the A5S310Z, however there is some adjustment allowed when needed on the A4S270/310R. The brake band functions in the following manner on BMW transmissions:

- A4S270/310R - The brake band is active (applied) in first and second gear. The brake band holds the reaction sun drum stationary. The reaction sun drum is splined to the reaction sun gear.
- A5S310Z - The brake band is active (applied) in second, third and fifth gear. The brake band holds the forward sun gear to the case. See **Fig. 24**.

G00317034

Fig. 24: Identifying Band Brake Operation
Courtesy of BMW OF NORTH AMERICA, INC.

ONE-WAY CLUTCHES (FREEWHEEL)

The one way clutch consists of an inner and outer ring with a locking device between the two. The one way clutch is designed to lock in one direction and to allow free rotation in the other direction. See **Fig. 25**. Currently there are two types of one way clutches used in BMW transmissions:

- Roller type which consists of spring loaded rollers between the inner and outer race of the one way clutch. (Roller type is also used without springs on some applications).
- Sprag type which consists of asymmetrical shaped wedges located between the inner and outer race of the one way clutch.

In both versions of the one way clutch (freewheel), rotation is only allowed in one direction. Using the diagrams above, imagine that the inner races were locked stationary. The outer race would only be allowed to turn

counter clock wise. In the clock wise direction, the outer race of both versions would be locked. In the roller type, the helper springs would push the rollers up the ramp on the outer race. This would force the rollers in to the smaller area which would cause the outer race to lock, In the sprag type, the asymmetrical wedges would lock between the inner and outer race. The one way clutches are used in the transmission to prevent an interruption of drive torque during certain gear shifts and to allow engine braking during coasting. Also there is a one way clutch in the stator of the torque converter.

PLANETARY GEAR SET

Planetary gear sets are compact gear units that receive input drive torque and provide the required output ratios for all forward gears and reverse gear. The planetary gear set consists of four main components:

1. Internal ring gear.
2. Planetary gears (pinions).
3. Sun gear.
4. Planetary gear carrier.

Various ratios are obtained by driving or holding different components in the planetary gear set. The example shown is a simple planetary gear set. See **Fig. 26**. Today's modern transmissions use a combination of multiple planetary gear sets referred to as a compound planetary gear set.

G00317036

Fig. 26: Identifying Planetary Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Advantages of Planetary Design

There are distinct advantages to the planetary gear set in comparison with a standard transmission gear set. Primarily, drive torque does not need to be interrupted to change gears. The planetary members are in constant mesh and there are more teeth engaged in any given ratio. This allows more torque to be transferred through the transmission.

Basic Power Flow Example

As an example of power flow in reverse gear, planetary gear carrier (4) is held stationary. The sun gear (3) is driven in a clockwise direction. The planetary pinions (2) are driven counterclockwise, which in turn drives the internal ring gear (1) counter clockwise as well. See **Fig. 27**.

22

Transmission Fundamentals

Fig. 27: Identifying Basic Power Flow

Courtesy of BMW OF NORTH AMERICA, INC.

Compound Planetary Gear Sets

Compound planetary gear sets use multiple planetary components which are a variation on the simple planetary gear set. Since the inception of the simple planetary gear set, there have been numerous compound gear sets introduced. BMW transmissions use the following gear sets:

- Simpson Gear Set - used on 4HP22 and 4HP24.
- Ravigneax Gear Set - used on A4S270R, A4S310R, A5S310Z, A5S325Z, A5S360R and A5S390R.
- Wilson Gear Set - used on A5S440Z and A5S560Z.
- Lepelletier Gear Set - used on the GA6HP26Z.

Simpson Gear Set

The Simpson Gear Set is one of the early variations on the simple set. It is capable of 3 forward gears and one

reverse. On BMW transmissions, the Simpson Gear set is used in the 4HP transmission which is a four speed automatic. See **Fig. 28**. Fourth gear (overdrive) is obtained by the addition of an auxiliary gear set (simple). Characteristics of the Simpson Gear set are as follows:

- Two Internal Ring Gears, one rear input ring and one attached to the rear planetary carrier.
- Two Planetary carriers, each containing three planetary pinions.
- One common Sun gear, which meshes with both sets of planetary pinions.

G00317038

Fig. 28: Identifying Simpson Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Ravigneaux Gear Set

A new version on the planetary design is the Ravigneaux gear set. See **Fig. 29**. This gear set is capable of 4 forward gears and one reverse. However, depending upon application it may be used with an auxiliary gear set. Here are some examples:

- The A4S310/270R uses the Ravigneaux set for 3 forward gears and one reverse. Overdrive is obtained by the auxiliary gear set.
- The A5S310Z uses a combination of the Ravigneaux gear set and the auxiliary gear set to obtain 5 forward gear and one reverse. First, second and reverse gears are achieved by using a combination of both gear sets.

- The A5S360/390R uses a modified version of the Ravigneaux set that provides five forward gears and one reverse. There is no auxiliary gear set used.

Typical Ravigneaux Gear Set

Fig. 29: Identifying Ravigneaux Gear Set
 Courtesy of BMW OF NORTH AMERICA, INC.

Characteristics of the Ravigneaux Gear Set are:

- One planetary carrier which is common to both sets of planetary pinions.
- Two sets of planetary pinions, one long set with small diameter and one short set with large diameter.
- Two sun gears, one input sun gear and one reaction sun gear.
- One common ring gear.

NOTE: **The Ravigneaux Gear Set shown in the figure is a typical representation. There are a few variations of this arrangement used on BMW transmissions.**

Wilson Gear Set

On BMW transmissions, the Wilson gear set is only used on the A5S440Z and A5S560Z. See **Fig. 30**. The Wilson Gear Set consists of three planetary gear sets. The ring gear of the first gear set, the planetary carrier of the second gear set and the ring gear of the third planetary gear set and directly connected to the "Pot". The "Pot" is a cylindrical device that slides over all of the components to unitize the individual gear sets into an

assembly. The characteristics of the Wilson Gear Set are:

- Three planetary carriers.
- Three ring gears, with ring gear 1 and 3 meshed to "Pot" assembly.
- Three sun gears, sun gear 2 and 3 are common (attached). Sun gears 2 and 3 are also referred to as the "Double Sun Gear".

G00317040

Fig. 30: Identifying Wilson Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Lepelletier Gear Set

The Lepelletier Gear Set was introduced to BMW on the ZF GA6HP26Z. See **Fig. 31**. This gear set allows for 6 forward speeds and one reverse gear using a light weight design. The planetary gear train consists of a single carrier planetary gear train and a downstream double planetary gear train.

Planetary Gear Set Operation

In order to understand planetary gear set operation, it is important to understand some basic rules of operation:

- It is assumed that engine rotation is clockwise when referring to power flow charts and diagrams.
- Planetary pinions will always rotate in the same direction as the internal ring gear.
- When the sun gear is driven clockwise and the planetary carrier is held stationary the internal ring gear will rotate counter clockwise (reverse gear).

- When two or more planetary members are locked together, the assembly will rotate together. The ratio from input to output is 1:1.
- When the sun gear is held stationary and the planetary carrier is driven clockwise, the ring gear will be driven clockwise in an overdrive ratio (.75:1)

When trying to understand power flow schematics, it is important to be able to draw a comparison between the actual planetary components and the schematic symbols. The diagram below outlines the relationship between these components and the power flow schematic. The schematic is a representation of a cross section of the transmission, but you only see the top half of the cross section. The transmission is shown as though it has been quartered lengthwise. See **Fig. 32**.

G00317042

Fig. 32: Identifying Gear Set Operation
 Courtesy of BMW OF NORTH AMERICA, INC.

POWER FLOW SCHEMATIC

In order to understand power flow schematics, a relationship must be drawn between the actual components and the schematic representation. This example uses the 4HP22/24 power flow schematic. The 4HP22/24 transmission uses a Simpson Planetary Gearset and an auxiliary gearset. The auxiliary gear set is a simple planetary gearset. See **Fig. 33**.

G00317043

Fig. 33: Identifying Power Flow Schematic
 Courtesy of BMW OF NORTH AMERICA, INC.

Power Flow In First Gear

Drive torque is applied to the torque converter impeller and transferred to the turbine. The turbine shaft rotates clockwise (CW). The "A" clutch locks the turbine shaft to the rear input ring gear. The rear input ring gear rotates CW driving the rear planet pinions CW. The planetary pinions drive the common sun gear CCW, which in turn drive the front planet pinions CW. The front planetary carrier is held from rotating CCW by one way clutch "J". The front planetary pinions which are rotating CW drive the front ring gear/rear carrier CW. The rear

Fig. 35: Power Flow In First Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Second Gear

Drive torque is applied to the torque converter impeller and transferred to the turbine. See **Fig. 36**. The turbine shaft rotates clockwise (CW). The "A" clutch locks the turbine shaft to the rear input ring gear. The rear input ring gear rotates CW driving the rear planet pinions CW. The sun gear is held stationary by the C' clutch. The rear planet pinions rotate around the fixed sun gear CW. The rear planetary carrier will rotate CW. The rear planetary carrier will drive the auxiliary gear set and will rotate as a complete unit. The auxiliary gear set is locked in a 1:1 ratio due to the "E" clutch locking the sun and ring gear together. The "C" clutch is locking the outer race of the "H" freewheel to the case. This is used for the 3/2 downshift. Freewheel "J" is not active and Freewheel "K" is locked.

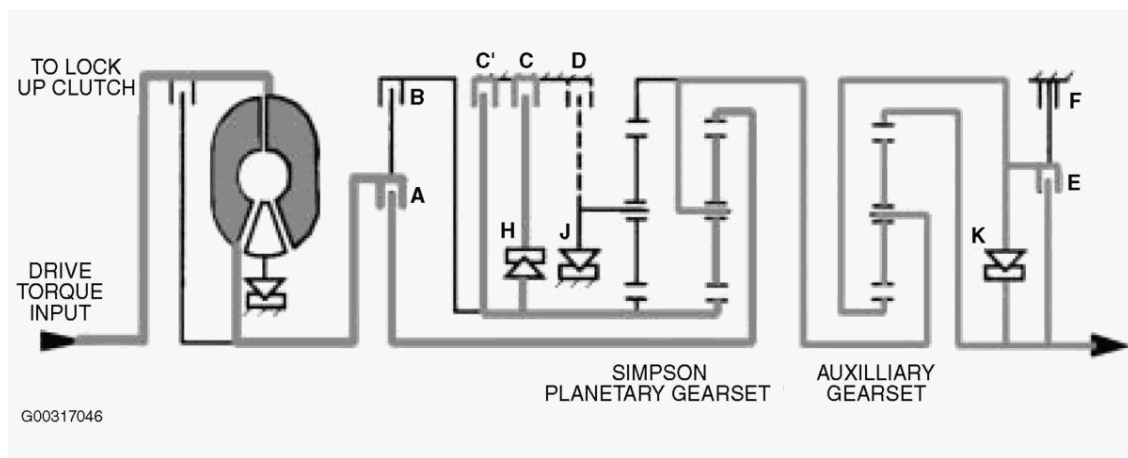

Fig. 36: Power Flow Schematic In Second Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Third Gear

Drive torque is applied to the torque converter impeller and transferred to the turbine. See **Fig. 37**. The turbine shaft rotates clockwise (CW). The "A" clutch and the "B" clutch are locked, this causes the rear input ring gear to be locked to the sun gear in the Simpson Gear set. The Simpson gear set is locked in a 1:1 ratio. The "E" clutch is locked which locks the ring gear to the sun gear in the Simpson gear set. The entire transmission planetary system is now locked in a 1:1 ratio. Freewheel "H" is overrun and freewheel "J" is not used. Freewheel "K" continues to be locked.

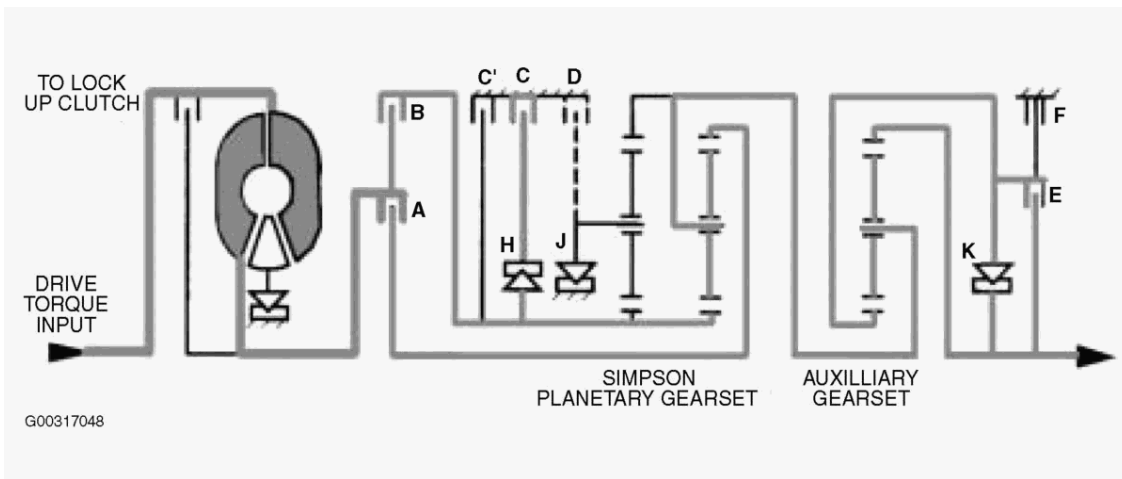

Fig. 37: Power Flow Schematic In Third Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Fourth Gear

Drive torque is applied to the torque converter impeller and transferred to the turbine. See **Fig. 38**. The turbine shaft rotates clockwise (CW). (The turbine shaft can also be driven by the lock up clutch when engaged). The "A" clutch and the "B" clutch are locked, this causes the rear input ring gear to be locked to the sun gear in the Simpson Gear set. The Simpson gear set is locked in a 1:1 ratio. The "F" clutch is locked which locks the sun gear in the auxiliary gear set to the case. The Simpson gear set drives the planetary carrier CW. The planet pinions walk around the fixed sun gear in a CW direction. This causes the ring gear to rotate CW as well. The ring gear, which is the output of the transmission is driven in an overdrive ratio. Freewheel "H" and "K" are overrun. Freewheel "J" is not used.

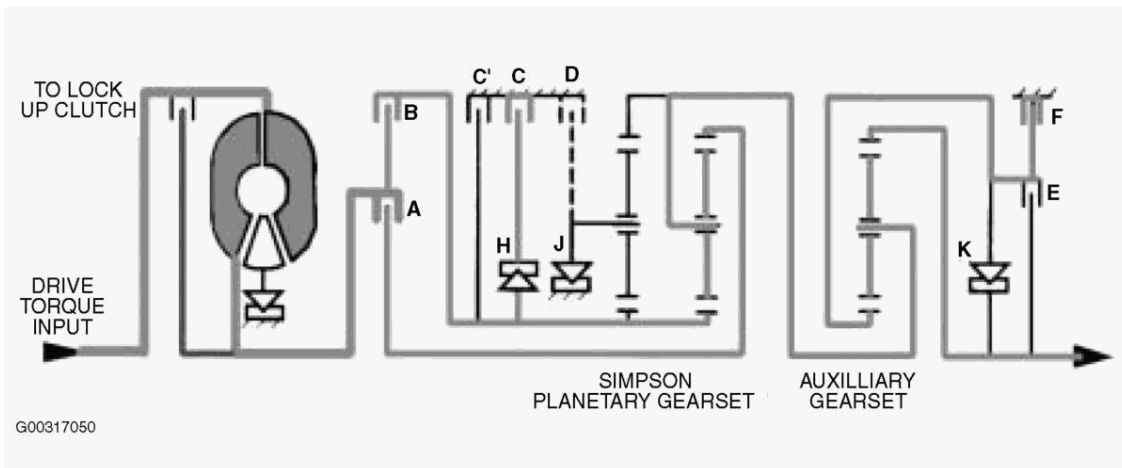

Fig. 38: Power Flow Schematic In Fourth Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Reverse Gear

Drive torque is applied to the torque converter impeller and transferred to the turbine. See **Fig. 39**. The turbine shaft rotates clockwise (CW). The "B" clutch is locked which drives the sun gear in the Simpson gear set CW.

The sun gear drives the planet pinions CCW. The planetary carrier is held stationary by the "D" clutch. The planet pinions cause the front ring gear to rotate CCW. The front ring gear (and rear carrier) drive the auxiliary gear set CCW which rotates at a ratio of 1:1 due to the "E" clutch locking the sun and ring gear of the auxiliary gear set. Freewheel "H" and "J" are not used. Freewheel "K" is locked.

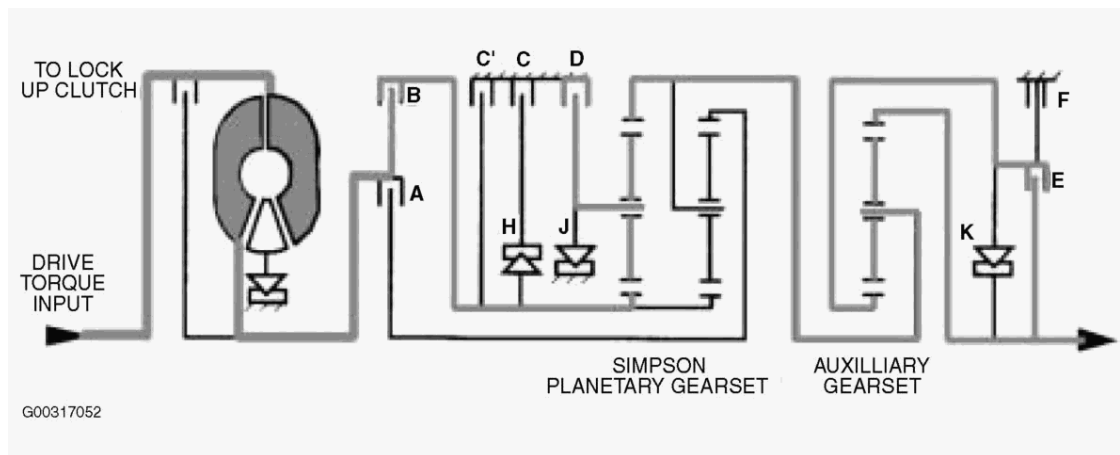

Fig. 39: Power Flow Schematic In Reverse Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

SHIFT CONTROL

Freewheel Shifting

In order to prevent an interruption in power flow, freewheel (One Way Clutches) are used to lock members of the planetary gear set. Certain transmissions such as the 4HP22/24, A4S270/310R and the A5S360R use freewheel shifting on all gear shifts. Transmissions such as A5S310Z, A5S440Z, A5S560Z and GA6HP26Z use freewheel shifting for only specific shifts. Other shifts in these transmissions use overlap shifting technology. To demonstrate how the freewheel is used, the freewheel "H" in the 4HP22/24 transmission will be examined.

In third gear, the sun gear is rotating clockwise. Freewheel "H" is overrun (unlocked) allowing the sun gear to rotate. Clutch "C" is active which locks the outer race of freewheel "H" to the case. During a 3/2 downshift, clutch "B" is released. The sun gear is held from rotating counter clockwise by freewheel "H" and the "C" clutch. Freewheel "H" is used to stop the counter clockwise rotation of the sun gear before the "C" clutch can engage. This prevents an interruption of power flow during the 3/2 downshift. If freewheel "H" fails to operate, there would be an increase in engine RPM from 3rd to 2nd gear. See **Fig. 40** and **Fig. 41** .

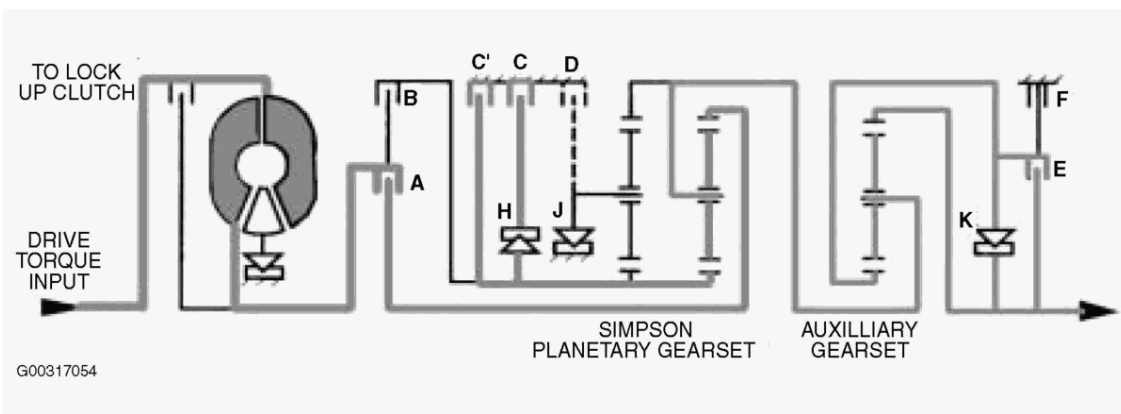

Fig. 40: Freewheel Shifting (Second Gear)
 Courtesy of BMW OF NORTH AMERICA, INC.

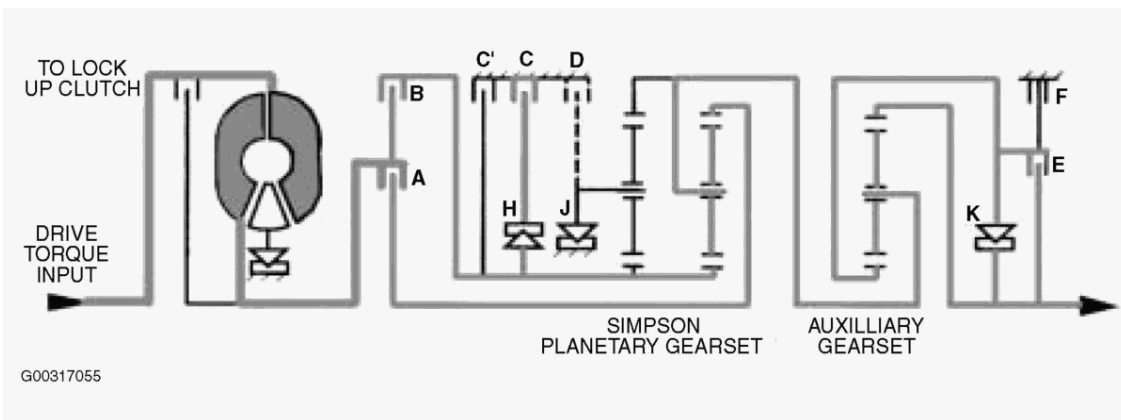

Fig. 41: Freewheel Shifting (Third Gear)
 Courtesy of BMW OF NORTH AMERICA, INC.

Overlap Shift Control

Overlap shift technology is currently used on ZF transmissions. The A5S310Z, A5S440Z, A5S560Z and the GA6HP26Z use overlap shift technology on most gear changes. The advantages of this design allows for the reduction of the use of One Way Clutches (freewheel) and a significant improvement in shift quality. During an overlap shift, the releasing clutch pressure is reduced at the same rate that the engaging clutch pressure is increased. The result is a smooth transfer of torque between gear ratios.

As shown in the diagram, clutch 1 is fully engaged with maximum pressure. Clutch 2 is fully released. During overlap shifting, the TCM closely monitors the rotational speeds of the turbine (input) shaft and output shaft. The TCM then uses the EDS solenoids to control pressures during shifting to provide the optimum shift timing and overlap control. See **Fig. 42**.

G00317056

Fig. 42: Identifying Overlap Shift Control
 Courtesy of BMW OF NORTH AMERICA, INC.

Overlap Shifting

During the transition of overlap, the clutches run through a slip zone. The torque is gradually transferred from the clutch that is releasing to the clutch that is engaging. The new gear engages the moment the torque level exceeds that of the first clutch. This is described as overlap. If the overlap is correct, (zero overlap) the engaging clutch takes over as much torque as the disengaging clutch releases. The result is a seemingly unnoticed shift of the best quality. See [Fig. 43](#) and [Fig. 44](#).

G00317057

Fig. 43: Identifying Overlap Shifting (Clutch 1 Engaged)
 Courtesy of BMW OF NORTH AMERICA, INC.

G00317058

Fig. 44: Identifying Overlap Shifting (Clutch 1 Disengaged)
Courtesy of BMW OF NORTH AMERICA, INC.

Negative Overlap

Negative overlap occurs when the engaging clutch takes over too late or the releasing clutch drops pressure too early. The result is that the drive torque is briefly interrupted. When the engine is operating under load, the engine speed increases due to the interruption. When coasting the engine speed drops. See **Fig. 45**.

G00317059

Fig. 45: Identifying Negative Overlap
Courtesy of BMW OF NORTH AMERICA, INC.

Positive Overlap

If positive overlap occurs, the engaging clutch takes over too early or the releasing clutch pressure drops too late. The gear set would become momentarily blocked if this condition occurs during an upshift. When this occurs the ratio of the gear set becomes 1:1 momentarily. The result is a loss in drive torque during a gear shift. See **Fig. 46**.

G00317060

Fig. 46: Identifying Positive Overlap

Courtesy of BMW OF NORTH AMERICA, INC.

TRANSMISSION CONTROL MODULE

The TCM receives inputs, processes information and actuates the output elements to provide optimal shift points. The TCM is programmed for maximum shift comfort and fuel economy. The TCM on most BMW vehicles is located in the E-Box next to the ECM (DME). There are several types of TCM housings:

- 35 Pin TCM (TCU) - used on the 4HP transmissions.
- 55 Pin TCM used on the A4S310R (THM-R1).
- 88 Pin TCM used on all others up to 98.
- 134 Pin TCM used on all BMW transmission from the 99 model year. (Note- the 134 pin TCM was introduced on the 98 Models equipped with the A5S440Z).

The 134 Pin TCM is also referred to as SKE (Standard Shell Construction). The SKE housing uses 5 separate connectors. On transmission applications only three connectors (1, 3 and 4) are used. Connectors 2 and 5 are blank and are NOT used. The connectors are Blue in color to avoid confusion with the ECM (DME) connectors which are Black. See [Fig. 47](#).

2003-05 TRANSFER CASES

Overview - xDrive

DESCRIPTION & OPERATION

XDRIVE

xDrive is a new four-wheel-drive system that delivers continuously variable input torques to the front and rear axles. xDrive comprises Dynamic Stability Control (DSC) and an electronically controlled multi-plate clutch in the transfer case. The DSC triggers the electronically controlled multi-plate clutch to supply continuously variable and power-oriented input torques to the front and rear axles. The rear axle is always powered. All of the input torque is applied to the rear axle when the multi-plate clutch is separated. xDrive communicates permanently with the DSC and receives from it, for instance, the following information:

- Whether the accelerator is pressed or released.
- Whether the engine torque is increasing or decreasing.
- Whether the car is driving straight ahead or in a curve.

xDrive continuously evaluates this information to detect whether the car can respond to the driver's requirements. xDrive intervenes to counter the threat of any tendency for wheelspin, oversteer or understeer. xDrive regulates input torque distribution between the two axles to meet driving demands. DSC only ever engages (by reducing engine power output and selective braking of individual wheels) should xDrive need assistance to keep the car on course. The input torque is delivered to the axle that has better traction when road conditions change, such as on snow, ice or a loose road surface.

TOPPING UP/CHANGING TRANSFER CASE OIL

NOTE: Use only the approved gear oil in the transfer box. See **TRANSFER CASE APPROVED OIL** . Failure to comply with this requirement will result in serious damage to the transfer box. Only change the oil when the transfer box is at normal operating temperature.

TRANSFER CASE APPROVED OIL

Oil Type	Part Number
Shell Gear Oil	83 220 306 816

CHECKING/CORRECTING TRANSFER CASE OIL LEVEL

NOTE: Numbers in text refer to numbers in figures.

Undo oil filler plug (1). Check transfer case oil level. If necessary, pour in gear oil up to lower edge of opening for oil filler plug (1). See **Fig. 1** . Replace sealing ring.

G00390788

Fig. 1: Identifying Oil Filler Plug & Drain Plug
Courtesy of BMW OF NORTH AMERICA, INC.

CHANGING TRANSFER CASE OIL

NOTE: Numbers in text refer to numbers in figures.

Place oil collecting apparatus underneath. Remove oil drain plug (2). Drain and dispose of gear oil. Replace sealing ring, screw in oil drain plug (2) and tighten down. Undo oil filler plug (1). Pour in gear oil up to lower edge of opening for oil filler plug (1). See **Fig. 1** . Replace sealing ring.

PURPOSE OF SYSTEM

XDRIVE

The innovative xDrive four-wheel drive is a system that controls and regulates the distribution of driving torque to the front and rear axles. The measured variables of DSC are used by xDrive but are also influenced by modified handling performance. The multi-disc clutch is the heart of the xDrive. By using the controlled multi-disc clutch, it is possible to resolve the conflict between traction and handling performance. This is achieved through the fact that torque distribution is not determined by a fixed gear ratio in the xDrive as was the case in the previous systems. Instead, the distribution of driving torque is dependent on the locking torque of the controlled multi-disc clutch in the transfer case and on the transferable torque to the front and rear axles. See

Fig. 2 .

G00390852

Fig. 2: Identifying xDrive System
Courtesy of BMW OF NORTH AMERICA, INC.

SYSTEM COMPONENTS

ATC 400/ATC 500 TRANSFER CASE

The ATC 400 is installed in the E83 and the ATC 500 in the E53 MU. They differ in that the ATC 500 is splined to the front propeller shaft and the ATC 400 uses a four bolt flange. In addition, there is one more disc in the multi-disc clutch of the ATC 500 and the distance between the input shaft and the output shaft to the front axle is 19 mm greater than in the ATC 400. See **Fig. 3 .**

POWER FLOW

When the multi-disc clutch in the transfer case is disengaged, no driving torque is transmitted to the front axle. All of the driving torque is then distributed to the rear axle. This is because the input shaft (1) is splined providing a permanent connection to the rear axle propeller shaft output flange (2). The multi-disc clutch couples the rear axle propeller shaft output flange to the front propeller shaft output (3). The driving torque on the front axle is increased or decreased by regulating the locking pressure of the multi-disc clutch, providing a stepless coupling of the front axle to the drivetrain. This depends on driving situations and road conditions. When the multi-disc clutch is fully engaged, the front and rear axles turn at the same speed. Driving torque distribution (front/rear) is based on available traction at each axle. For example, when traction is identical on the front and rear axles and a driver accelerates from a stop in first gear at full throttle, the rear axle is capable of sustaining greater driving torque as the vehicle weight shifts from the front to the rear. Another example is when the front axle is on a high traction surface and the rear axle is on ice. In this case, virtually all of the available driving torque is transmitted to the front axle. Based on available traction, virtually no driving torque can be supported by the rear axle. Obviously, when more driving torque is transmitted to the front axle, driving

torque on the rear axle is proportionally reduced due to lack of traction. See **Fig. 4** .

- 1. Input from transmission
- 2. Rear propeller shaft output
- 3. Front propeller shaft output

G00390854

Fig. 4: Identifying xDrive Power Flow
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: On a vehicle equipped with an automatic transmission, when driving onto brake analyzers, move the selector lever to the "N" position . On a vehicle equipped with a manual transmission, do not press the accelerator pedal once on the brake analyzer. This keeps the transfer case clutch open and the vehicle cannot be pulled off the analyzer.

ADJUSTING LEVERS

When the disc cam is rotated, it forces the adjusting levers apart. The ball ramps create a precision axial movement which compresses and increases pressure on the multi-disc clutch. This is completely variable up to a full lock. See **Fig. 5** .

G00390861

Fig. 5: Identifying Adjusting Levers
Courtesy of BMW OF NORTH AMERICA, INC.

SERVOMOTOR WITH MOTOR POSITION SENSOR

The servomotor with worm gear are powered to rotate the disc cam. The servomotor is a permanent magnet (1) DC motor which contains a Hall sensor (2) to detect the position and the adjusting speed of the motor shaft. This is proportional to the degree of multi-disc clutch engagement. See **Fig. 6** .

G00390862

Fig. 6: Identifying Servomotor With Motor Position Sensor
Courtesy of BMW OF NORTH AMERICA, INC.

CODING RESISTOR

Because of mechanical tolerances in production, the characteristic curve of the multi-disc clutch locking torque varies slightly. Once the actual locking torque has been measured on the clutch test bench, a resistor is attached to the servomotor; the resistor's value is a reference to the locking torque characteristic. Each time the engine is started, the transfer case control unit measures the resistance value once and the optimum program map for the transfer case fitted is selected. See **Fig. 7** .

TRANSFER CASE ELECTRONIC CONTROL UNIT

The transfer case control unit (VGSG) is installed in the X3 on the rear floor panel under the luggage compartment trim. In X5, it is located underneath the rear bench seat on the left. See **Fig. 8** . The transfer case

control unit (VGSG) is on the PT-CAN Bus. VGSG shares information with DSC for overall xDrive control and has diagnostic communication via the OBD connector. See **Fig. 9** and **Fig. 10**.

G00390857

Fig. 10: Transfer Case Inputs, Processing & Outputs

PRINCIPLE OF OPERATION

XDRIVE

The transfer case control unit (VGSG) regulates the locking pressure of the multi-disc clutch in the transfer case. The transfer case control unit receives information on the required clutch locking pressure from the DSC control unit. The processing, control and electronics required for this are integrated in the transfer case control unit. This information is converted and output as a corresponding rotary motion of the servomotor. In order to position the servomotor and compensate for wear, a reference run is carried out each time the ignition is switched off. The servomotor position is determined by a Hall sensor integrated in the servomotor. During the reference run, the clutch is engaged and disengaged completely (once). While the clutch is actuated, the current consumption is measured for the servomotor position. This allows the VGSG to determine the beginning and end of the clutch actuating procedure. A clutch and oil wear calculation is also processed and stored in the VGSG. It increases the locking pressure as necessary in order to reduce friction. In the event of DSC failure, the VGSG incorporates a fallback level (strategy) for activating the transfer case clutch in order to maintain the four-wheel drive function.

TCC

Regulation of the transfer case clutch (TCC) locking pressure allows stepless coupling of the front axle to the drivetrain. The driving torque on the front axle can be increased or decreased depending on the driving situation and road conditions. Obviously, when more driving torque is transmitted to the front axle, driving torque on the rear axle is proportionally reduced due to lack of traction. The advantages of variable distribution of driving torque to the front and rear axles are:

- Optimum utilization of the cornering and longitudinal wheel forces on the front and rear axles.
- DSC brake interventions only become necessary at a significantly later stage, an increase in comfort refinement.
- Compared with an "open" differential transfer case and DSC, xDrive significantly improves driving torque distribution when traction on the front and rear axles is notably different. The DSC control unit influences control of the transfer case clutch. Even when DSC is deactivated, TCC remains active for the purpose of maximum traction and driving dynamics.

Permanent four-wheel drive is only completely deactivated in three control situations:

- During very tight cornering with low engine torque to allow speed compensation between the front and rear axles (e.g. parking).
- At speeds greater than 112 mph.
- When the vehicle dramatically understeers.

The transfer case clutch control logic is described in three main modules:

- Pre-control.
- Traction control/driving dynamics control.

- Tire tolerance logic.

PRE-CONTROL

The pre-control logic (shared from DSC) reflects the driver's command and is calculated based on:

- Accelerator Pedal Value
- Engine Torque
- Engine RPM

In normal driving, the clutch is operated with minimum slip so that permanent four-wheel drive with a driving torque distribution of 40 percent on the front axle and 60 percent on the rear axle is available. Even when the traction for the front and rear axles is dramatically different, the pre-control ensures that the system responds very quickly.

In the case of the open transfer case, the brake is applied after slip is detected on the rear axle. This takes approximately one half of a second in reaction time. Sixty-two percent of the driving torque is supported on the two rear brake discs and only 38 percent of the driving torque can be transferred to the front axle. In other words, wheel slip must be sensed first before driving torque is transferred through the transfer case by applying the rear wheel brakes. In contrast to an "open" transfer case (differential), the xDrive does not require brake intervention on the rear axle because no slip can occur (permanent through connection). The transfer case clutch is engaging the front axle as the vehicle is accelerating. This takes significantly less time (approximately 1/10th of a second).

“Open” Transfer Case vs xDrive

M = Driving torque

M VA = Driving torque on front axle

t = Time

G00390858

Fig. 11: Transfer Case & xDrive Usage
 Courtesy of BMW OF NORTH AMERICA, INC.

TRACTION CONTROL/DRIVING DYNAMICS CONTROL

Traction control monitors the slip conditions on the front and rear axles. The wheel speeds, yaw rate and transversal acceleration serve as the input signals. The function of traction control/driving dynamics control is to achieve optimum traction and to keep the vehicle stable. In the event of an oversteer tendency, the transfer case clutch is completely engaged and the maximum supportable driving torque on the front axle is transmitted. This helps to "pull" the front of the vehicle until stability is achieved. See **Fig. 12** .

In the event of an understeer tendency, the clutch can be fully disengaged if necessary. In this example, the front axle is separated from the drivetrain and the driving torque can only be transmitted to the rear axle. This helps to "push" the rear of the vehicle until stability is achieved. See **Fig. 13** .

G00390859

Fig. 12: xDrive Oversteer Compensation
Courtesy of BMW OF NORTH AMERICA, INC.

G00390860

Fig. 13: xDrive Understeer Compensation

Courtesy of BMW OF NORTH AMERICA, INC.

TIRE TOLERANCE LOGIC

The tire tolerance logic detects different tread circumferences on the front and rear axles. This occurs when:

- Mixed tires are used.
- Space saving spare tire is installed.
- Tires are used that have been worn down to different levels.

Normally, tire circumference deviations result in drivetrain torque bias (unwanted variations). The tire circumference can fluctuate up to 1 percent or more as a result of mixed tires or wear. The tire tolerance logic decides depending on the driver's command and driving situation whether the slip is to occur in the transfer case clutch or at the contact area between tire and road. If the slip is permitted in the transfer case clutch, the locking pressure set by the pre-control is reduced in order to keep the work loss low. In the driving dynamic control situation, the clutch is locked slightly more than normal, the four wheel drive is always guaranteed when required. For maximum xDrive performance, tires (and wheels) of the same diameter should be installed on the vehicle.

2004-05 MANUAL TRANSMISSION

Removal & Installation - X3 (GS6-37BZ)

REMOVAL & INSTALLATION

MANUAL TRANSMISSION

CAUTION: Use only the approved gear oil in this manual transmission. Failure to comply with this requirement will result in serious damage to the transmission. For further information, see MANUAL TRANSMISSION - SERVICING article.

Removal

1. Disconnect battery. See INSTRUCTIONS FOR DISCONNECTING AND CONNECTING BATTERY.
2. Remove front underbody protection.
3. Remove complete exhaust system. See REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM (M54).
4. Remove heat shield. Remove front propeller shaft at transfer box and tie to one side. See DRIVE SHAFTS & UNIVERSAL JOINTS article.
5. Install Special Tool (11 0 250) between dome cross-brace and engine suspension eye and secure with dowel pin. See Fig. 1 . Pretension special tool with adjusting screw (1) to measurement "A". Engine secured in installation position. Installation position, measurement "A" = approximately 36 cm.
6. Remove propeller shaft from transmission. Release center bearing. Tie propeller shaft to one side. See DRIVE SHAFTS & UNIVERSAL JOINTS article.
7. Unfasten screws and remove transmission cross-member. See Fig. 2 .
8. Detach plug (1) from reversing light switch. See Fig. 3 . Release cable from mountings and tie to one side.
9. Detach plugs (1) and (2) from servomotor. See Fig. 4 .

NOTE: Pressure line of clutch slave cylinder remains connected. Relieve tension on clutch slave cylinder slowly; otherwise air will be drawn in through sealing sleeve.

10. Release nuts and remove clutch slave cylinder. See Fig. 5 .

CAUTION: Risk of damage: When lowering the transmission, make sure the engine does not rest against the bulkhead.

11. Lower transmission: turn Special Tool (11 0 250) back with adjusting screw (1) to measurement "A". See Fig. 1 . Transmission in removal position. Transmission removal position, measurement "A" = approximately 34 cm.

NOTE: Illustrations show E60.

12. Unlock bearing pin (1) in direction of arrow and remove. See **Fig. 6** . Lift out shift arm.
13. Lift off retainer (1). See **Fig. 7** . Disconnect shift rod (2).
14. Unfasten screws. See **Fig. 8** .
15. Unscrew bolt (1). See **Fig. 9** .
16. Support transmission with Special Tools (23 0 134, 23 0 131, 23 0 132, 23 0 112) and (00 2 030). See **Fig. 10** .

CAUTION: Do not allow transmission to hang from the transmission input shaft when removing and installing, as the clutch disk will be deformed.

17. Unfasten screws. See **Fig. 11** . Pull transmission downwards and remove.

Installation

1. Check that dowel sleeves are correctly seated. See **Fig. 12** . Replace damaged dowel sleeves. Ensure correct position of cover plate.
2. Check lubrication of transmission input shaft for sticky consistency. See **Fig. 13** . If grease is sticky, clean input shaft and replace clutch plate. Check clutch plate for friction rust in splines and replace if necessary. Mechanically remove existing grease and lining abrasion from splines of clutch plate (with a cloth).
3. Remove and clean release bearing and release lever. Push on grease Scraper Ring (21 2 221) as far as it

will go. See **Fig. 14** . Grease splines (1) of input shaft with a brush. Detach grease scraper ring.

4. To install, reverse removal procedure. Grease shift rod. Make sure shims (3) are in correct position. See **Fig. 7** . Grease bearing pins (1). See **Fig. 6** . Tighten fasteners to specification. See **TORQUE SPECIFICATIONS** . Before installing transmission cross-member, turn Special Tool (11 0 250) back with adjusting screw (1) to measurement "A" (installation position). See **Fig. 1** . Installation position, measurement "A" = 36 cm.

LUBRICATION

NOTE: Transmission is sealed at factory for life of transmission. If any leaks are found, factory recommends replacing transmission assembly.

SERVICE INTERVALS

Transmission fluid replacement is not necessary, except for some newer model vehicles with Condition Based Service. See **AUTOMATIC TRANSMISSION** overview article.

CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)

CAUTION: It is absolutely essential to use the approved automatic transmission fluid in this automatic transmission. Failure to comply with this requirement will result in serious damage to the automatic transmission. See **RECOMMENDED FLUID** .

NOTE: Before releasing filler plug (1), make sure temperature of automatic transmission fluid is at least 30 °C.

NOTE: Numbers in text refer to numbers in figures.

Add ATF After Repairs

Selector lever to setting "P". The vehicle must be horizontal and should be secured to prevent it from rolling away. Connect BMW Diagnosis and Information System (DIS) or BMW MoDiC to car.

Release filler plug (1). See **Fig. 6** . Top up automatic transmission fluid until it flows over. Screw in filler plug (1) by hand. Start engine and run at idle speed. Operate brake and shift through all gears at idle speed several times (hold gears for 3 sec. in each case).

G00382297

Fig. 6: Locating Filler Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Release filler plug (1) again. Top up automatic transmission fluid until it flows over. Increase temperature of automatic transmission fluid to 40-50°C. Check temperature of automatic transmission fluid with MoDiC or DIS. Screw in filler plug (1).

Installation: replace filler plug (1). Tighten to specification. See **TORQUE SPECIFICATIONS** .

Check Fluid Level

Connect BMW Diagnosis and Information System (DIS) and/or BMW MoDiC to vehicle and perform fluid level check in accordance with instructions.

CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R/390R, A4S 200R/310R)

NOTE: Numbers in text refer to numbers in figures.

CAUTION: Use only the approved transmission fluid in this automatic transmission. See RECOMMENDED FLUID . Failure to comply with this requirement will result in serious damage to the automatic transmission. Refer also to adhesive label on transmission fluid sump.

Move selector lever to park position "P". The vehicle must be horizontal and secured against rolling off.

Connect BMW Diagnosis and Information System (DIS) or BMW MoDiC to vehicle. Release filler plug (1). See **Fig. 7** . Top up automatic transmission fluid until overflowing. Screw in filler plug (1) by hand. Start engine and run at idle speed. Actuate brake and shift through all gears at idle speed. Open filler plug (1) again. Increase temperature of transmission fluid to 30-50°C. Interrogate temperature of transmission fluid with MoDiC or DIS. Top up automatic transmission fluid until overflowing. Screw in filler plug (1).

G00382343

Fig. 7: Removing Filler Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Installation: check sealing ring on filler plug (1) for damage and, if necessary, replace sealing ring and filler plug. Tighten to specification. See **TORQUE SPECIFICATIONS** .

RECOMMENDED FLUID

A5S 360R/390R (GM5)

330xi (6/00 To Present)

The transmission oil pan will be labeled with either Texaco ETL-7045 or Dexron III. Fill or top off with the proper fluid only. Do not mix Texaco ETL-7045 and Dexron fluids.

A5S 325Z (5HP19)

330i & 330Ci (6/00 To Present) & 325i & 325Ci (9/00 To Present)

No fluid changes are necessary. Never mix any other oil with this transmission when doing repair or when topping off. Use ESSO (LT 711441) BMW part No. (83 22 9 407 807).

ADJUSTMENTS

GEARSHIFT SELECTOR LEVER CABLE (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

Check cable for ease of movement. Move selector lever to "P" setting. Grip clamp bushing (1). Loosen nut (2). Press selector lever (3) forward (park position). Press cable (4) in direction of arrow and release again. Grip clamping piece (1). Tighten nut (2) to 88 INCH lbs. (10 N.m). See **Fig. 8**. Move selector lever to "P" position. Check whether parking lock is engaged by rotating shaft or pushing car.

1. Clamp Bushing
2. Nut
3. Selector Lever
4. Cable

G00317004

Courtesy of BMW OF NORTH AMERICA, INC.

ADJUSTING SELECTOR LEVER (A5S 360R/390R, A4S 200R, 6HP26Z/19Z)

NOTE: Numbers in text refer to numbers in figures.

Check cable for ease of movement. Move selector lever to "P" position.

Grip clamping sleeve (1). See **Fig. 9** . Slacken nut (2). Press selector lever (3) forwards into park position. Press cable (4) in direction of arrow and release again. Grip clamping sleeve (1). Tighten down nut (2) to specification. See **TORQUE SPECIFICATIONS** .

G00382376

Fig. 9: Adjusting Selector Lever

Courtesy of BMW OF NORTH AMERICA, INC.

Installation: move selector lever to "P" position. Check whether parking gear is engaged by turning propeller shaft.

PROGRAMMING

CONTROL UNIT

Turn off ignition. Connect MoDiC or DIS Tester. Turn on ignition. Select "Programming". For subsequent procedure, follow MoDiC or DIS instructions. Installation location of control unit, refer to DIS Tester.

REMOVAL & INSTALLATION

CAUTION: It is absolutely essential to use the approved automatic transmission fluid in this automatic transmission. Failure to comply with this requirement will result in serious damage to the automatic transmission.

REMOVING AND INSTALLING OR REPLACING PARKING LOCK (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z) .

Remove and install transmission oil sump. See REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z) .

Push in detent disk (1) in direction of arrow up to stop. See **Fig. 10** . Unfasten screws (2). Remove guide bracket (3). Upon installation, tighten fasteners to specification. See TORQUE SPECIFICATIONS .

G00382298

Fig. 10: Removing Guide Bracket
Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew bolt (1). See **Fig. 11** . With an offset tool (2) (e.g. hexagon socket screw key 5 A/F), push out guide pin of locking pawl (4). Remove spring (3) and locking pawl (4). Upon installation, tighten fasteners to

specification. See **TORQUE SPECIFICATIONS** .

G00382299

Fig. 11: Removing Spring & Locking Pawl
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: check function of parking lock. Move selector lever into "P" setting. Check whether parking lock is engaged by rotating Cardan shaft or by pushing car.

REMOVING AND INSTALLING/REPLACING POSITION SWITCH (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

Move selector lever into "P" setting. Unlock cable plug (1) and disconnect. See **Fig. 12** .

G00382316

Fig. 12: Locating Cable Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Release screw. Remove cable plug (1) with retaining bracket. See **Fig. 13** .

G00382317

Fig. 13: Removing Cable Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Grip clamping sleeve (1). See Fig. 14 . Loosen nut (2). Installation: adjust selector lever. See GEARSHIFT SELECTOR LEVER CABLE .

G00367875

Fig. 14: Locating Shift Lever Nut

Courtesy of BMW OF NORTH AMERICA, INC.

Grip cable at hexagon head (1). Unscrew nut (2). See **Fig. 15** . Remove cable from bracket. Upon installation, tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382318

Fig. 15: Removing Cable From Bracket

Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew nut (1). See **Fig. 16** . Remove gearshift lever (2). Upon installation, tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382319

Fig. 16: Removing Gearshift Lever

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws. Detach position switch from manual shift valve shaft. See **Fig. 17** . Upon installation, pay attention to locating pin and cable routing.

G00382320

Fig. 17: Detaching Position Switch

Courtesy of BMW OF NORTH AMERICA, INC.

To install, reverse removal procedure.

REMOVING AND INSTALLING/REPLACING SHIFT UNIT (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install transmission sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Remove and install/replace transmission fluid screen. See **REMOVING AND INSTALLING/REPLACING TRANSMISSION OIL SCREEN (A5S 325Z)** .

Remove retaining clip with screwdriver (2). See **Fig. 18** . Insert transmission plug (1) in transmission. Upon installation: to facilitate assembly, coat O-ring with Vaseline. See **Fig. 19** .

G00382322

Fig. 18: Removing Retaining Clip

Courtesy of BMW OF NORTH AMERICA, INC.

G00382323

Fig. 19: Locating O-Ring

Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1). See **Fig. 20** . Remove pulse generator (2). Pull off connector (3).

G00382324

Fig. 20: Removing Pulse Generator

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws. See **Fig. 21** . Take off valve body. Upon installation, tighten fasteners to specification. See **TORQUE SPECIFICATIONS** .

G00382325

Fig. 21: Removing Valve Body
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: coat O-rings (1) with automatic transmission fluid. See **Fig. 22** .

CAUTION: Journal (1) of detent disk must be located in groove (2) of slide valve. See **Fig. 23** .

G00382326

Fig. 22: Locating O-Rings

Courtesy of BMW OF NORTH AMERICA, INC.

G00382327

Fig. 23: Locating Detent Disk

Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING SOLENOID VALVE OR PRESSURE REGULATOR (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

To locate solenoid valve and pressure regulator components, see **Fig. 24** .

G00382328

Fig. 24: Locating Solenoid Valve & Pressure Regulator Valve Components
Courtesy of BMW OF NORTH AMERICA, INC.

Detach plug (1) from solenoid valve or pressure regulator. See **Fig. 25** .

G00382329

Fig. 25: Detaching Plug

Courtesy of BMW OF NORTH AMERICA, INC.

Release screws (1). See **Fig. 26** . Remove retaining plate (2). Withdraw solenoid valve (1, 2 or 3) or pressure regulator (2, 3 or 4). Upon installation: coat new solenoid valve with ATF.

G00382330

Fig. 26: Removing Solenoid Valve Or Pressure Regulator
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: note installation position of retaining plate (2). See **Fig. 27** . Curved surface of retaining plate (2) must point to solenoid valve or pressure regulator. Install screws (1). Tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382331

Fig. 27: Installing Retaining Plate

Courtesy of BMW OF NORTH AMERICA, INC.

REMOVING AND INSTALLING/REPLACING SELECTOR UNIT (A5S 360R/390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R) .

Remove and install transmission fluid sump. See REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R) .

Remove and install/replace transmission fluid screen. See REMOVING AND INSTALLING/REPLACING TRANSMISSION SCREEN (A5S 360R / 390R, A4S 200R) .

NOTE: As of model year 2001 (04/2000), the temperature sensor is integrated in the

wiring harness.

Disconnect all plug connections on shift unit. See **Fig. 28** . Unclip temperature sensor (1) from holder.

G00382349

Fig. 28: Locating Plug Connections & Temperature Sensor
Courtesy of BMW OF NORTH AMERICA, INC.

NOTE:

DO NOT release screws (1). See **Fig. 29** . Release all other screws, with outside Torx E8, on shift unit and remove shift unit.

G00382350

Fig. 29: Removing Shift Unit

Courtesy of BMW OF NORTH AMERICA, INC.

Pull out seals (1), (2) and (3). See **Fig. 30** . Coat new seals with automatic transmission fluid and install.

G00382351

Fig. 30: Locating Seals

Courtesy of BMW OF NORTH AMERICA, INC.

Installation: blow out tapped holes with compressed air gun. Insert set screws (1) from seal set into tapped holes. See Fig. 31 .

G00382352

Fig. 31: Inserting Set Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Length of screws: (1) = (2) = 68 mm, all others = 58 mm. Install shift unit with aid of both set screws and secure in place with screws. See **Fig. 32** . Remove both set screws. Tighten all screws until hand-tight. When tightening screws: follow sequence without fail. Tighten to specification. See **TORQUE SPECIFICATIONS** . Do not tighten screws (1) and (2) yet.

G00382353

Fig. 32: Locating Set Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Suspend guide (1) of transmission switch in detent spring (2). See **Fig. 33** . Journal (3) of detent disk must be located in groove (4) of slide valve.

G00382354

Fig. 33: Suspending Guide Of Transmission Switch In Detent Spring
Courtesy of BMW OF NORTH AMERICA, INC.

Insert feeler gauge (1) between detent spring (2) and detent disk (3) and set gap of 0.80 mm by moving detent spring (2). See **Fig. 34** . Tighten down screws (4). See **TORQUE SPECIFICATIONS** .

G00382355

Fig. 34: Setting Gap Between Detent Spring & Detent Disk
Courtesy of BMW OF NORTH AMERICA, INC.

REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Open drain plug (1). See **Fig. 35** . Drain off automatic transmission fluid. Unscrew all bolts. Remove oil sump (2). Detach gasket from oil sump (2). Clean sealing faces. Upon installation, replace sealing ring on drain plug. Tighten drain plug to specification. See **TORQUE SPECIFICATIONS** .

G00382344

Fig. 35: Locating Drain Plug

Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: Tighten down screws, not in diagonal sequence but rather in order, one time to specified torque.

Fit new gasket on oil sump. Clean magnets (1) and reinstall in oil sump. See **Fig. 36** . Install oil sump. Insert all screws until contact is made with screw head in each case. Tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382345

Fig. 36: Installing Oil Sump

Courtesy of BMW OF NORTH AMERICA, INC.

REMOVING AND INSTALLING/REPLACING TRANSMISSION OIL SCREEN (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Release screws (1). See **Fig. 37** . Pull transmission oil screen (2) towards bottom and remove.

G00382321

Fig. 37: Removing Transmission Oil Screen
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: coat sealing ring with ATF. Tighten fasteners to specification. See **TORQUE SPECIFICATIONS** .

REMOVING AND INSTALLING/REPLACING TRANSMISSION SCREEN (A5S 360R / 390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Remove transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R)** .

Pull off transmission fluid screen (1) towards bottom and remove. See **Fig. 38** .

G00382346

Fig. 38: Pulling Off Transmission Fluid Screen
Courtesy of BMW OF NORTH AMERICA, INC.

If the sealing ring (1) has remained in the pump housing, it must be removed and the transmission fluid screen replaced. See **Fig. 39** .

G00382347

Fig. 39: Locating Sealing Ring

Courtesy of BMW OF NORTH AMERICA, INC.

Installation: different transmission fluid screens are used in petrol/gasoline and diesel engines. Therefore check specified measurement A prior to installation. See **Fig. 40** . Measurement A: Gasoline engine:

- M52TU = 38-40 mm
- M43TU = 29-31 mm

Diesel engine: M57 = 29-31 mm. Position (1): Two gaskets are fitted.

G00382348

Fig. 40: Identifying Transmission Screen

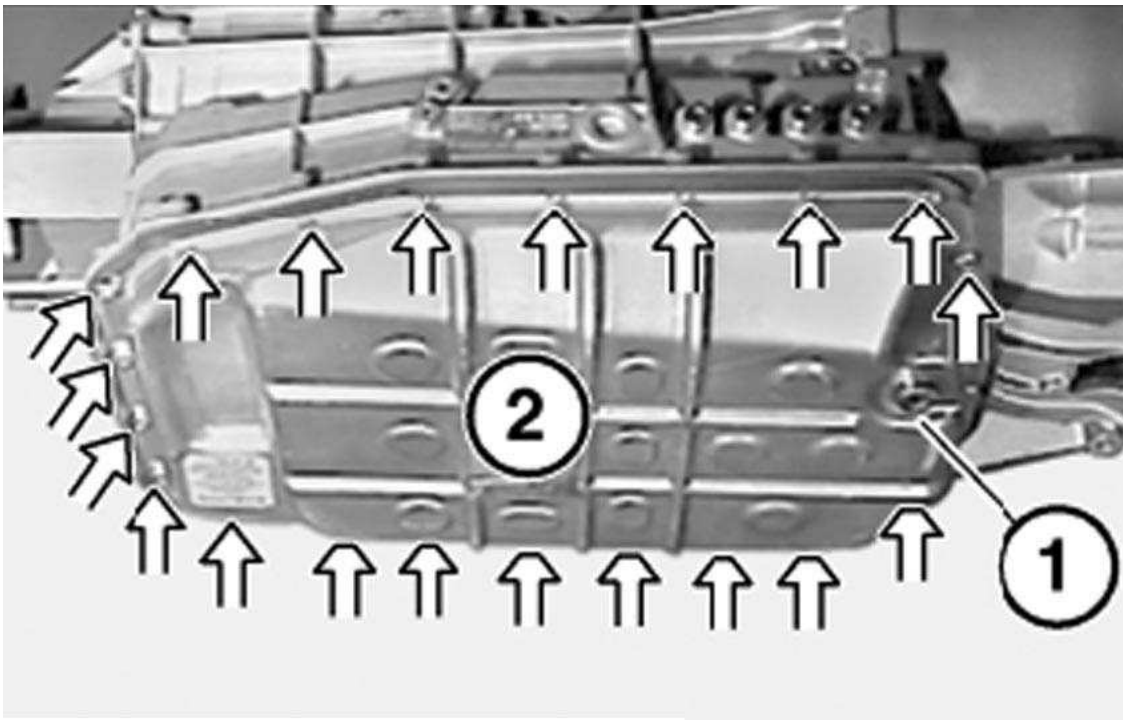

Courtesy of BMW OF NORTH AMERICA, INC.

REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

CAUTION: It is absolutely essential to use the approved automatic transmission fluid in this automatic transmission. Failure to comply with this requirement will result in serious damage to the automatic transmission.

Release drain plug (1). See **Fig. 41** . Drain automatic transmission fluid. Unscrew all bolts. Remove oil sump (2). Upon installation, tighten fasteners to specification. See **TORQUE SPECIFICATIONS** .

G00382300

Fig. 41: Removing Oil Sump

Courtesy of BMW OF NORTH AMERICA, INC.

Remove gasket (1). See Fig. 42 . Clean sealing surface (2). Upon installation, replace seal.

G00382301

Fig. 42: Locating Gasket

Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: Using torque wrench, do not tighten screws diagonally but once one after the other. DO NOT tighten screws further.

Clean magnets (1) and insert in oil sump again (2). See **Fig. 43** . Install oil sump (2). Insert all screws until contact is made with screw head in each case. Tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382302

Fig. 43: Locating Magnets

Courtesy of BMW OF NORTH AMERICA, INC.

REMOVING & INSTALLING TRANSMISSION EXTENSION (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

Remove heat shield (1). See **Fig. 44** .

G00367851

Fig. 44: Removing First Heat Shield
Courtesy of BMW OF NORTH AMERICA, INC.

Remove heat shield (1). See **Fig. 45** .

G00367852

Fig. 45: Removing Second Heat Shield

Courtesy of BMW OF NORTH AMERICA, INC.

Support transmission with Special Tool (00 2 030 / 24 5 301 / 24 5 304). See **Fig. 46** .

G00367901

Fig. 46: Supporting Transmission With Special Tool
Courtesy of BMW OF NORTH AMERICA, INC.

Release screws and remove cross-member (1). See **Fig. 47** . Upon installation, tighten screws to specification. See **TORQUE SPECIFICATIONS** .

G00367856

Fig. 47: Removing Cross-Member

Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws. See **Fig. 48** . Upon installation, replace self-locking nuts. Tighten to specification. See **TORQUE SPECIFICATIONS** .

G00367857

Fig. 48: Locating Flexible Disk To Propeller Shaft Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Grip propeller shaft and release nuts. See **Fig. 49** . Bend propeller shaft downwards at center mount (1), detach from transmission output flange and tie back to one side on underbody of vehicle. Upon installation, tighten screws to specification. See **TORQUE SPECIFICATIONS** .

G00367858

Fig. 49: Detaching Propeller Shaft From Transmission Output Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws. See **Fig. 50** . Upon installation, tighten screws to specification. See **TORQUE SPECIFICATIONS** .

G00382303

Fig. 50: Locating Transmission Extension Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Remove transmission extension. Upon installation, install shim (1). Replace O-ring (2). See **Fig. 51** .

G00382304

Fig. 51: Locating Shim & O-Ring
Courtesy of BMW OF NORTH AMERICA, INC.

To install, reverse removal procedure.

REMOVING AND INSTALLING OR REPLACING TRANSMISSION EXTENSION HOUSING (A5S 360R / 390R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R) .

Remove complete exhaust system.

Remove heat shields. See Fig. 44 and Fig. 45 .

Support transmission with special tools 00 2 030 / 24 5 301 / 24 5 305. See **Fig. 46** .

Release screws. Remove cross-member (1). See **Fig. 47** . Upon installation, tighten screws to specification. See **TORQUE SPECIFICATIONS** .

Release screws. See **Fig. 48** . Upon installation, replace self-locking nuts. Tighten to specification. See **TORQUE SPECIFICATIONS** .

Grip propeller shaft and release nuts. See **Fig. 49** . Bend propeller shaft downwards at center bearing (1). Detach propeller shaft from transmission output flange and tie back to side on vehicle underbody. Upon installation, tighten nuts to specification. See **TORQUE SPECIFICATIONS** .

Version 1 without spring washer: grip output flange (1) with Special Tool (23 0 020). See **Fig. 52** . Release hexagon nut. Detach output flange (1). Upon installation, replace sealing ring in output flange (1). Install hexagon nut with screw retaining compound. Tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382356

Fig. 52: Detaching Output Flange (Version 1)
Courtesy of BMW OF NORTH AMERICA, INC.

Version 2 with spring washer: release hexagon nut (1) on output flange (2). See **Fig. 53** . Upon installation, install hexagon nut with screw retaining compound and tighten to specification. See **TORQUE SPECIFICATIONS** .

G00382357

Fig. 53: Releasing Hexagon Nut On Output Flange
Courtesy of BMW OF NORTH AMERICA, INC.

Version 2 with spring washer: remove spring washer (1). See **Fig. 54** . Remove output flange (2). Upon installation: note installation direction of spring washer (1). Replace sealing ring in output flange (2).

G00382358

Fig. 54: Removing Output Flange (Version 2)

Courtesy of BMW OF NORTH AMERICA, INC.

Withdraw radial seal (1) with Special Tool (00 5 010). See **Fig. 55** .

G00382359

Fig. 55: Removing Radial Seal

Courtesy of BMW OF NORTH AMERICA, INC.

Release screws on transmission extension housing (1). See **Fig. 56** . Carefully pull off transmission extension housing (1). Upon installation, tighten screws to specification. See **TORQUE SPECIFICATIONS** .

G00382360

Fig. 56: Locating Screws On Transmission Extension Housing
Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: Existing shim (2) remains fitted and is not recalculated.

Replace gasket between transmission housing (1) and end cover. See **Fig. 57** .

G00382361

Fig. 57: Replacing Gasket Between Transmission Housing & End Cover
Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: If shim is lost: Calculate new shim.

Calculate measurement between contact face (1) and parking gear (2) with Special Tool (00 2 550). See **Fig. 58** . Calculate the new shim with this measurement from the following figure. See **Fig. 59** .

G00382362

Fig. 58: Measuring Between Contact Face & Parking Gear
Courtesy of BMW OF NORTH AMERICA, INC.

Calculated measurement in mm	Shim
15,99 - 16,27	0.95/1.05
16,27 - 16,47	1.15/1.25
16,47 - 16,67	1.35/1.45
16,67 - 16,87	1.55/1.65
16,87 - 17,07	1.75/1.85
17,07 - 17,27	1.95/2.05
17,27 - 17,47	2.15/2.25
17,47 - 17,67	2.35/2.45
17,67 - 17,87	2.55/2.65
17,87 - 18,07	2.75/2.85

G00382363

Fig. 59: Calculating Shim Measurement
 Courtesy of BMW OF NORTH AMERICA, INC.

Installation: coat sealing lips of new radial seal with automatic transmission fluid. Drive in radial seal with Special Tool (24 1 090) until flush. See **Fig. 60** .

G00382364

Fig. 60: Driving In Radial Seal

Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING BEARING ON TRANSMISSION EXTENSION (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

CAUTION: After completion of work, check transmission oil level. Use only approved transmission fluid. Failure to comply with this instruction will result in serious damage to the transmission. End play must be checked and, if necessary, adjusted. See REPLACING OUTPUT FLANGE (A5S 325Z) .

Remove output flange. See REMOVING & INSTALLING TRANSMISSION EXTENSION (A5S 325Z) .

Lift out circlip (1). See Fig. 61 . Remove ball ring (2).

G00382311

Fig. 61: Locating Circlip

Courtesy of BMW OF NORTH AMERICA, INC.

Heat transmission extension in area of bearing race to approx. 80°C (hot air blower). See **Fig. 62** . Remove bearing race (3). Installation: install first ball ring (4), then bearing race.

G00382312

Fig. 62: Removing Bearing Race

Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING OUTPUT FLANGE (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

Remove output flange from mounting. See **REPLACING RADIAL SEAL FOR OUTPUT FLANGE (A5S 325Z)** . Installation: coat sealing lip of radial seal and sealing surface of output flange with ATF.

Installation: an end float of 0.15 - 0.35 mm is required between parking interlock gear and end face of output flange. End play is adjusted with shim (1). See **Fig. 92** . Replace sealing ring.

NOTE: Output flange must be free.

Determining thickness of shim: clamp transmission extension in a vise. Press output flange in direction of arrow. See **Fig. 63** .

G00382313

Fig. 63: Pressing Output Flange
Courtesy of BMW OF NORTH AMERICA, INC.

Determine distance (A) from shoulder to sealing surface and distance (B) from shoulder to end face of output flange. See **Fig. 64** . Example:

- A = 10.00 mm
- B = 7.50 mm

G00382314

Fig. 64: Locating Distance A & B

Courtesy of BMW OF NORTH AMERICA, INC.

Remove shim from sprag wheel. Press sprag wheel inwards. Determine distance (E) from sealing surface on transmission housing to shoulder (1) on parking lock gear. See **Fig. 65** . Example: E = 4.00 mm.

G00382315

Fig. 65: Locating Distance E

Courtesy of BMW OF NORTH AMERICA, INC.

NOTE: Shims are available in 0.2 mm increments from 0.8 to 2.8 mm.

Calculate shim thickness:

1. $A - B = C$
2. $E - C$ - end play = shim thickness
3. If necessary: round distance to an amount divisible by 2. Pay attention to distance for end play (0.15 - 0.35 mm) in so doing. Example:
 - $10 - 7.5 = 2.5$
 - $4 - 2.5 - 0.25 = 1.15$ 3. 1.2

Install shim (example: 1.20 mm).

REPLACING OUTPUT FLANGE (A5S 360R / 390R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R) .

Remove complete exhaust system.

Remove heat shield (1). See Fig. 44 .

Release screws. See Fig. 48 . Upon installation: replace self-locking nuts and tighten to specification. See TORQUE SPECIFICATIONS .

Grip propeller shaft. Release nuts. See Fig. 49 . Bend propeller shaft downwards at center bearing (1). Detach propeller shaft from transmission output flange and tie back to side on vehicle underbody. Upon installation, tighten nuts to specification. See TORQUE SPECIFICATIONS .

Grip output flange (1) with Special Tool (23 0 020). See Fig. 66 . Release hexagon nut. Detach output flange (1). Upon installation, install hexagon nut with screw retaining compound and tighten to specification. See TORQUE SPECIFICATIONS .

G00382365

Fig. 66: Detaching Output Flange

Courtesy of BMW OF NORTH AMERICA, INC.

Installation: replace inner sealing ring (1) on output flange (2). See **Fig. 67** .

G00382366

Fig. 67: Replacing Inner Sealing Ring
Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: There are two different output flanges; DO NOT mix them up.

Version 1 (without spring washer) Identifying features:

- There is no spring washer fitted between the flange nut and output flange to secure the output flange (2) on the flange nut (1). See **Fig. 68** .
- When this output flange is replaced, the add-on kit detailed below must be retrofitted.

CAUTION: Only the modified version (Version 2) is still available as a replacement.

G00382367

Fig. 68: Identifying Version 1
Courtesy of BMW OF NORTH AMERICA, INC.

For retrofit kit, see **Fig. 69** . Install add-on kit for output flange.

- 1 Snap ring
- 2 Sealing ring
- 3 Output flange
- 4 Spring washer
- 5 Flange nut

G00382368

Fig. 69: Identifying Retrofit Kit

Courtesy of BMW OF NORTH AMERICA, INC.

CAUTION: If the version 2 output flange is replaced by a version 2 model, the snap ring supplied in the add-on kit must not be replaced because the fitted snap ring is difficult to remove. See [Fig. 69](#) The fitted snap ring must be left in the transmission

NOTE: In series production, the output flange with spring washer is fitted from transmission serial number 7912 and has no color marking.

Version 2 (with spring washer) Identifying features:

1. As the substitute, the output flange with spring washer (2) is identified with a white marking (1) around its circumference. See **Fig. 70** .
2. The spring washer (1) is fitted between flange nut and output flange (2). See **Fig. 71** .

G00382369

Fig. 70: Identifying Version 2
Courtesy of BMW OF NORTH AMERICA, INC.

G00382370

Fig. 71: Locating Spring Washer

REPLACING PRESSURE REGULATOR FOR CONVERTER LOCKUP CLUTCH (A5S 360R / 390R, A4S 200R)

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R) .

Remove shift unit. See REMOVING AND INSTALLING/REPLACING SELECTOR UNIT (A5S 360R / 390R, A4S 200R) .

Remove retaining spring. Pull out pressure regulator (1) for converter lockup clutch. See Fig. 72 .

G00382371

Fig. 72: Removing Pressure Regulator
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: coat new pressure regulator (1) for converter lockup clutch with automatic transmission fluid.

REPLACING PRESSURE REGULATOR FOR MAIN PRESSURE (A5S 360R/390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Remove transmission sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R)** .

Remove transmission fluid screen. See **REMOVING AND INSTALLING/REPLACING TRANSMISSION SCREEN (A5S 360R / 390R, A4S 200R)** .

Disconnect plug (1) from pressure regulator (2) for main pressure. See **Fig. 73** . Remove retaining spring (3). Remove pressure regulator (2) for main pressure. Upon installation: coat new pressure regulator (2) for main pressure with automatic transmission fluid.

G00382372

Fig. 73: Removing Pressure Regulator For Main Pressure
Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING PRESSURE REGULATOR FOR SYSTEM PRESSURE (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install shift unit. See **REMOVING AND INSTALLING/REPLACING SHIFT UNIT (A5S 325Z)** .

Disconnect plug (1) from pressure regulator (2) for system pressure. See **Fig. 74** .

G00382332

Fig. 74: Disconnecting Plug From Pressure Regulator
Courtesy of BMW OF NORTH AMERICA, INC.

Unscrew bolt (1). See **Fig. 75** . Remove retaining plate (2). Remove pressure regulator (3) for system pressure. Upon installation: coat new pressure regulator (3) for system pressure with ATF.

G00382333

Fig. 75: Removing Pressure Regulator For System Pressure
Courtesy of BMW OF NORTH AMERICA, INC.

Slide in pressure regulator (4). See **Fig. 76** . Install retaining plate (1) with lug (2) as illustrated. Install screw (3). Tighten fasteners to specification. See **TORQUE SPECIFICATIONS** .

G00382334

Fig. 76: Installing Pressure Regulator
Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING PULSE GENERATOR (OUTPUT SPEED) (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Unscrew bolt (1). See **Fig. 77** . Remove pulse generator (2). Upon installation, tighten bolt to specification. See **TORQUE SPECIFICATIONS** .

G00382335

Fig. 77: Removing Pulse Generator
Courtesy of BMW OF NORTH AMERICA, INC.

Detach plug (1) from pulse generator (2). See **Fig. 78** .

G00382336

Fig. 78: Detaching Plug From Pulse Generator
Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING PULSE GENERATOR (OUTPUT SPEED) (A5S 360R / 390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Remove transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Pull off plug (1). See **Fig. 79** . Unscrew bolt (2). Withdraw pulse generator (3). Upon installation, tighten bolt to specification. See **TORQUE SPECIFICATIONS** . Read out fault memory of EGS control unit. Check stored fault messages, eliminate faults and then clear fault memory.

G00382375

Fig. 79: Removing Output Speed Pulse Generator
Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING PULSE GENERATOR (TURBINE SPEED) (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Remove and install transmission oil screen. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Remove and install shift unit. See **REMOVING AND INSTALLING/REPLACING SHIFT UNIT (A5S**

325Z .

Unscrew bolt (1). See **Fig. 80** . Withdraw pulse generator (2). Pull off connector (3). Upon installation, tighten bolt to specification. See **TORQUE SPECIFICATIONS** .

G00382337

Fig. 80: Removing Pulse Generator

Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING PULSE GENERATOR (TURBINE SPEED) (A5S 360R / 390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Remove transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R)** .

Pull off plug (1). See **Fig. 81** . Release screw (2). Withdraw pulse generator (3). Upon installation, tighten screw

to specification. See **TORQUE SPECIFICATIONS** . Read out fault memory of EGS control unit. Check stored fault messages, eliminate faults and then clear fault memory.

G00382374

Fig. 81: Removing Turbine Speed Pulse Generator
Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING RADIAL SEAL ON MANUAL SHIFT VALVE SHAFT (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove position switch from the manual shift valve shaft. See **REMOVING AND INSTALLING/REPLACING POSITION SWITCH (A5S 325Z)** .

Remove radial seal with Special Tool (24 5 260) from transmission housing. See **Fig. 82** .

G00382340

Fig. 82: Removing Radial Seal

Courtesy of BMW OF NORTH AMERICA, INC.

Installation: fit Special Tool (24 5 490) to the manual shift valve shaft. See **Fig. 83** . Coat sealing lip of new radial seal (1) with transmission oil. Slide radial seal onto manual shift valve shaft.

G00382341

Fig. 83: Sliding Radial Seal Onto Manual Shift Valve Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: press radial seal into transmission case with Special Tool (24 5 250). See **Fig. 84** . Pull Special Tool (24 5 490) off manual shift valve shaft.

G00382342

Fig. 84: Pressing Radial Seal Into Transmission Case
Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING RADIAL SHAFT SEAL FOR MANUAL SHIFT VALVE SHAFT (A5S 360R / 390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Grip clamping sleeve (1). Loosen nut (2). See **Fig. 99** . Upon installation, tighten nut to specification. See **TORQUE SPECIFICATIONS** .

Unscrew nut (1). Remove selector lever (2). See **Fig. 100** . Upon installation, tighten nut to specification. See **TORQUE SPECIFICATIONS** .

Screw Special Tool (24 5 361) into radial shaft seal. See **Fig. 85** .

G00382381

Fig. 85: Screwing Special Tool Into Radial Shaft Seal
Courtesy of BMW OF NORTH AMERICA, INC.

Screw Special Tool (24 5 362) onto Special Tool (24 5 361) and tighten down. See **Fig. 86** . This pulls the radial shaft seal out of the transmission housing.

G00382382

Fig. 86: Removing Radial Shaft From Transmission Housing
Courtesy of BMW OF NORTH AMERICA, INC.

Screw adapter sleeve (1) from seal set onto manual shift valve shaft. See **Fig. 87** . Moisten sealing lips of radial shaft seal (2) with automatic transmission fluid. Push radial shaft seal (2) onto manual shift valve shaft. Press radial shaft seal (2) as far as possible into transmission housing. Grip radial shaft seal (2) firmly. Unscrew adapter sleeve (1) from manual shift valve shaft.

G00382383

Fig. 87: Removing Adapter Sleeve From Manual Shift Valve Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Pull radial shaft seal into transmission housing up to stop with Special Tools (24 5 363) and (24 5 364). See **Fig. 88** . Upon installation, adjust selector lever. See **ADJUSTING SELECTOR LEVER (A5S 360R / 390R, A4S 200R, 6HP26Z/19Z)** .

REPLACING RADIAL SEAL FOR OUTPUT FLANGE (A5S 360R / 390R)

To replace radial seal for output flange, see **REMOVING AND INSTALLING OR REPLACING TRANSMISSION EXTENSION HOUSING (A5S 360R / 390R)** .

REPLACING SOLENOID VALVE 1, 2 OR 3 (A5S 360R / 390R, A4S 200R)

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Remove transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R)** .

CAUTION: Note position of wiring harness.

Disconnect plug from solenoid valve. Remove retaining spring and withdraw solenoid valve (1, 2 or 3). See **Fig. 98** . Upon installation: coat new solenoid valve with automatic transmission fluid.

Allocation of solenoid valves (SV):

- | | |
|---|------------------|
| 1 | SV switching 1-2 |
| 2 | SV switching 2-3 |
| 3 | SV switching 4-5 |

REPLACING TRANSMISSION SWITCH (A5S 360R / 390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R) .

Move selector lever to position "D". Remove transmission oil sump. See REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R) .

Remove and install selector unit. See REMOVING AND INSTALLING/REPLACING SELECTOR UNIT (A5S 360R / 390R, A4S 200R) .

Grip clamping sleeve (1). Slacken nut (2). See Fig. 99 .

G00367853

Fig. 99: Releasing Selector Lever Nut
Courtesy of BMW OF NORTH AMERICA, INC.

Release nut (1). See **Fig. 100** . Remove selector lever (2). Upon installation, tighten fasteners to specification. See **TORQUE SPECIFICATIONS** . Adjust selector lever. See **ADJUSTING SELECTOR LEVER (A5S 360R / 390R, A4S 200R, 6HP26Z/19Z)** .

G00382377

Fig. 100: Removing Selector Lever

Courtesy of BMW OF NORTH AMERICA, INC.

Drive spring pin (1) out of transmission switch (2). See **Fig. 101** . Withdraw manual shift valve shaft (3) from transmission only so far that transmission switch (2) can be removed. DO NOT remove parking gear rack. DO NOT move parking gear rack more than 10 mm; if necessary, secure with pointed pliers. Release notched disk on parking gear rack. Remove transmission switch (2) with detent disk.

G00382378

Fig. 101: Removing Transmission Switch
Courtesy of BMW OF NORTH AMERICA, INC.

Remove transmission switch (1) from detent disk (2). See **Fig. 102** . Upon installation: bore holes for spring pin in transmission switch (1) must overlap with bore holes of detent disk (2) and manual shift valve shaft.

G00382379

Fig. 102: Removing Transmission Switch From Detent Disk
Courtesy of BMW OF NORTH AMERICA, INC.

Installation: attach parking gear rack (1) from rear in detent disk (2). See **Fig. 103** . Slide in manual shift valve shaft. Drive in spring pin. During entire installation work, journal (3) must be aligned vertically to manual shift valve shaft. After installation of detent spring, ensure that parking lock functions correctly. Press journal (3) forwards into "P" position, rotate propeller shaft and check that locking pawl engages.

G00382380

Fig. 103: Installing Parking Gear Rack In Detent Disk

REPLACING WIRING HARNESS IN AUTOMATIC TRANSMISSION (A5S 325Z)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 325Z)** .

Remove and install transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION OIL SUMP (A5S 325Z)** .

Remove and install transmission oil screen. See **REMOVING AND INSTALLING/REPLACING TRANSMISSION OIL SCREEN (A5S 325Z)** .

Remove and install shift unit. See **REMOVING AND INSTALLING/REPLACING SHIFT UNIT (A5S**

325Z .

Disconnect plug (1) from solenoid valve. See **Fig. 104** . Detach plug (2) from pulse generator (3).

G00382338

Fig. 104: Disconnecting Plugs

Courtesy of BMW OF NORTH AMERICA, INC.

Remove connector (1). See **Fig. 105** . Remove retaining clip (2). Remove wiring harness from cable guide (3).

G00382339

Fig. 105: Removing Wiring Harness

Courtesy of BMW OF NORTH AMERICA, INC.

REPLACING WIRING HARNESS IN AUTOMATIC TRANSMISSION (A5S 360R/390R, A4S 200R)

NOTE: Numbers in text refer to numbers in figures.

NOTE: After completing work, top up ATF level. Check/top up fluid level in automatic transmission. See **CHECKING/TOPPING UP FLUID LEVEL IN AUTOMATIC TRANSMISSION (A5S 360R / 390R, A4S 200R / 310R)** .

Remove transmission oil sump. See **REMOVING AND INSTALLING/SEALING OR REPLACING TRANSMISSION FLUID SUMP (A5S 360R / 390R, A4S 200R)** .

Remove transmission plug at rear right.

Pull off transmission fluid screen (1) towards bottom and remove. See **Fig. 38** .

NOTE: If the sealing ring (1) has remained in the pump housing, it must be removed and the transmission fluid screen replaced. See Fig. 39 .

Disconnect all plug connections on shift unit. Unclip temperature sensor (1) from holder. See Fig. 28 .

NOTE: As of model year 2001 (04/2000), the temperature sensor is integrated in the wiring harness.

Remove retaining clip with screwdriver (2). See Fig. 18 . Insert transmission plug (1) in transmission. Remove wiring harness from automatic transmission.

Installation: to facilitate installation, coat sealing rings with petroleum jelly. See Fig. 19 . Make sure transmission plug is in correct position.

RECOMMENDED FLUID

From model year 2004, some manual transmissions are filled with Castrol MTF-LT-2 lifetime fluid. This fluid has the same properties as the MTF-LT-1 fluid. The MTF-LT-1 fluid may be mixed or substituted for the MTF-LT-2 manual transmission fluid.

FLUID CAPACITIES

Fluid capacity is approximately 1.4 qts. (1.3L). Transmission should be filled to bottom of filler plug hole.

ADJUSTMENTS

GEARSHIFT LINKAGE

No external adjustment is necessary.

REMOVAL & INSTALLATION

REPLACING RADIAL SEAL FOR SELECTOR SHAFT (GS6-37BZ)

NOTE: Numbers in text refer to numbers in figures.

CAUTION: After completion of work, check transmission fluid level. See DRAINING/TOPPING UP GEAR OIL IN MANUAL TRANSMISSION . Use only approved transmission fluid. See RECOMMENDED FLUID . Failure to comply with this instruction will result in serious damage to the transmission.

Remove transfer box. See REMOVING AND INSTALLING TRANSFER BOX (ATC 400 X-DRIVE) . Shift transmission into 2nd gear.

Lever retaining ring (1) out of groove with a small screwdriver. See Fig. 2 . Slide locking ring (1) towards rear. Drive out cylinder pin (2).

INTRODUCTION

xDrive is an all-wheel drive system that links Dynamic Stability Control (DSC) system to an electronically controlled multi-plate clutch in the transfer box.

The electronically controlled multi-plate clutch smoothly distributes the drive torque as required to the front axle. The rear axle is always powered.

All of the drive torque is applied to the rear axle when the multi-plate clutch is separated.

- > E53, E83
- > E70

xDrive constantly communicates with the DSC. The drive-dynamic input information is computed in the DSC control unit.

Important information is:

- Accelerator pedal position
- Engine torque
- Drive-dynamic state

The DSC calculates the necessary locking torque. The locking torque is communicated to xDrive. This allows xDrive to register whether the vehicle is able to follow the driver's commands. xDrive intervenes to counter the threat of any tendency for wheel spin, oversteer or understeer. xDrive regulates drive torque distribution between the two axles to meet driving demands.

Only if xDrive cannot maintain the vehicle's course on its own will DSC also intervene. Engine output is reduced and individual wheels are specifically braked.

The drive torque is delivered to the axle that has better traction when road conditions change, such as on snow, ice or a loose road surface.

The transfer cases are matched to vehicles as follows:

- E53: ATC 500 transfer case
(ATC = Active Torque Control)
- E70: ATC 700 transfer case
- E83: ATC 400 transfer case

The transfer cases differ in the following points:

- Different number of plates in the multi-plate clutches
- Different clearance between the input and output shafts to the front axle
- Propeller shaft inserted into the front axle differential on the E53, E70, and flange-mounted on the E83

The transfer case is designed to be stronger on the E53, E70 in order to match the higher engine torques.

The advantages:

xDrive delivers the following advantages through demand-oriented drive torque distribution:

- Outstanding driving stability fully up to the limit range
- Optimal forward momentum
- Excellent traction in all road situations

xDrive is standard equipment on the E70, E83 and on the E53 from October 2003 with the new model version.

BRIEF DESCRIPTION OF COMPONENTS

xDrive consists of the following components:

- **Transfer case with multi-plate clutch**

The electronically controlled multi-plate clutch is housed in the transfer case. The multi-plate clutch distributes the drive torque **smoothly and as required** between the front and rear axles.

- **VTG actuator motor with incremental sensor and classification resistor**

The VTG actuator motor (VTG: transfer case) opens and closes the multi-plate clutch. The location of the actuator motor shaft and the adjustment rate are detected by the incremental sensor.

The classification resistor ensures that mechanical tolerances in the transfer case are considered. Optimum function is thus ensured.

- **Actuator lever**

The actuator lever converts the rotational motion of the VTG actuator motor into an axial motion.

- **VTG control unit**

The VTG control unit regulates the locking torque at the multi-plate clutch in the transfer case in response to the following factors:

- Demand for required locking torque (comes from the DSC control unit)
- Condition of the transmission oil (calculated in the VTG control unit)
- Multi-plate clutch wear (calculated in the VTG control unit)
- Load on VTG actuator motor (calculated in the VTG control unit)
- Transmission oil temperature (calculated in the VTG control unit)

The VTG control unit supplies the following information to the DSC control unit:

- The locking torque currently set
- All calculated data

The locking torque is limited whenever needed in order to reduce the frictional work.

- > E53, E83
- > E70

○ **DSC: Dynamic Stability Control**

With xDrive, DSC includes the following functions:

- All-wheel control
- Automatic Differential Brake (ADB-X)
- Hill Descent Control (HDC)

All-wheel control

Dynamic Stability Control (DSC) specifies the nominal value for xDrive all-wheel control. The nominal value depends on the vehicle's tendency to oversteer or understeer and wheel slip. The nominal value is transmitted to the VTG control unit.

Automatic differential brake

The automatic differential brake (ADB-X) simulates the function of conventional limited-slip differentials by selectively applying brakes on individual wheels (known from the E53 and the E46 All-wheel drive).

Whenever a wheel displays a tendency to spin the ADB-X automatically brakes it down to a preset slip. This effect of this is to increase the drive torque on those wheels that have a higher friction coefficient on a lining.

Hill Descent Control

Hill Decent Control (HDC) is a cruise control on four-wheel drive cars for driving downhill (known from the E53 and the E46 All-wheel drive).

HDC can be activated and deactivated with a separate button.

When the HDC button is pressed, HDC automatically reduces road speed. The brakes are applied on all four wheels to reduce road speed to just above walking pace. HDC holds this speed constant (all DSC functions remain active).

The car's road speed can be freely varied within fixed values by pressing down on the accelerator pedal, brake pedal or the buttons for the cruise-control system.

The following control units and switches are incorporated in xDrive functions:

- **DME or DDE: Digital engine electronics or digital diesel electronics**

The DME or DDE modifies the engine response as required by the DSC control unit (such as power reduction to prevent the driven wheels from spinning).

○ **Instrument cluster display**

System states are displayed as follows:

- DSC/xDrive telltale and warning lights light up:

DSC/xDrive not activated

- DSC/xDrive telltale and warning lights light up and acoustic signal:

DSC defective, ABS not affected, VTG control unit OK

or

DSC OK, VTG control unit defective

- > All-wheel drive in emergency mode

- DSC/xDrive telltale and warning lights, ABS telltale and warning lights and general brake warning lamp light up and acoustic signal:

Total failure of the DSC and/or malfunction of the VTG control unit

- > All-wheel drive in emergency mode
- > E53, E83

The instrument cluster is the data interface (= gateway) between the K-bus and the PT-CAN.

- **JBE: Junction box electronics**

- > E70

The JBE is the data interface (= gateway) between the K-CAN and PT-CAN.

The junction box comprises the JBE and the power distributor.

SYSTEM FUNCTIONS

xDrive comprises the following functions:

- Control of the locking torque for the multi-plate clutch
- Emergency operation

Control of the locking torque for the multi-plate clutch

The locking torque for the multi-plate clutch in the transfer case can be regulated. This means that the front axle can be smoothly coupled to the drive train. The drive torque at the front axle can be increased or reduced in response to the road situation and conditions.

The DSC control unit calculates the locking torque for the multi-plate clutch as follows:

- Pre-activation = driver's command
- Driving dynamic control
- Detection of different tire rolling circumferences

Pre-activation

The pre-activation circuit reflects the driver's wishes. In other words, the pre-activation circuit is used to calculate the necessary locking torque.

The evaluation criteria below are taken into account to in determining the driver's command:

- Accelerator-pedal value
- Engine torque
- Engine speed
- Vehicle road speed
- Gear engaged
- Steering angle

Driving dynamic control

Driving dynamic control monitors the slip on the front and rear axles. Driving dynamic control has the task of achieving optimum traction and keeping the car stable or to stabilize it.

The following evaluation criteria are taken into account by the monitoring system:

- Wheel speeds
- Yaw rate
- Lateral acceleration
- Steering angle

The drive torque is distributed as follows in normal driving with all-wheel drive:

- 40 % to the front axle
- 60 % to the rear axle

Distribution of the drive torque is oriented upon the torque that can be supported by each axle. For instance, if the car is fully accelerated in 1st gear from a standing start the distribution of the dynamic axle-load creates a higher axle load on the rear axle. Therefore, the rear axle can convey a higher drive torque.

Example: The front wheels are on a high-traction surface. The rear wheels are on, e.g. sheet ice (low traction). In this case, almost 100 % of the available drive torque would be transmitted to the front axle. The rear axle is under hardly any load any can support only a low drive torque.

When driving in a curve, the lateral acceleration causes centrifugal force that forces the car to the outside. The car leaves the stable driving condition when the centrifugal force is stronger than the maximum possible wheel lateral guiding forces. "Understeer" is the phrase used when the car presses outwards over the front wheels. Oversteer, on the other hand, is when the rear wheel adhesion becomes lower. The rear of the car presses outwards.

xDrive minimizes the tendency to understeer or oversteer by optimally distributing the driving power between the rear axle and front axle.

[more -]

Detection of different tire rolling circumferences

If the tire rolling circumferences are not the same the drive train twists due to different rotary speeds (when the multi-plate clutch is closed).

Differences in rotational speed can occur as a result of the following influences:

- When tires of different makes and types are fitted:

The tire rolling circumference may fluctuate by up to 1 % due to tires of different makes and types being fitted or the tires are worn very differently.

- When an emergency wheel is fitted
- When the tires are worn very differently

Slip in the multi-plate clutch may compensate for differences in rotary speed when different tire rolling circumferences are detected.

Compensation is produced by reducing the locking torque in situations that do not have great driving dynamic control.

Emergency operation

Driving dynamic control and the ADB-X function are not possible in emergency operation.

The VTG control unit has an integral regulator for emergency control. The regulator provides redundancy for controlling the multi-plate clutch in the DSC control units.

The regulator is used to attempt to maintain all-wheel drive for as long as possible when the DSC control unit malfunctions or important sensor signals drop out.

Substitute values are calculated when individual sensor signals drop out. Functions are operated by using the

substitute values until it is no longer possible to control the all-wheel drive effectively. This can lead to the complete loss of all-wheel drive.

Transfer Case - Repair Instructions - X3

00 TRANSFER CASE, GENERAL

00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Pour oil only into appropriately marked containers
- Do not pour oil into drinking vessels (drinks bottles, glasses, cups or mugs)
- Observe country-specific safety regulations

First aid measures:

- Do not induce vomiting.

If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

If the person affected is unconscious, do not administer anything by mouth, place the person in the recovery position and seek immediate medical attention.

00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear protective goggles
- Wear oil-resistant protective gloves
- Observe country-specific safety regulations

First aid measures:

- Eye contact: Rinse eyes immediately with plenty of water for at least 15 minutes; if available, use an eye-rinsing bottle. If irritation of the eyes persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

NOTE: Do not use solvents/thinners.

00 SAFETY INSTRUCTIONS FOR HANDLING OIL

WARNING: 00 DANGER OF POISONING IF OIL IS INGESTED/ABSORBED THROUGH THE SKIN .
00 RISK OF INJURY IF OIL COMES INTO CONTACT WITH EYES AND SKIN .

Recycling:

Observe country-specific waste-disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

NOTE: Do not flush oil away with water or aqueous cleaning agents.

27 00 ... TOPPING UP/CHANGING TRANSFER CASE OIL

IMPORTANT: Use only the approved gear oil in the transfer box.
Failure to comply with this requirement will result in serious damage to the transfer box!

NOTE: Only change the oil when the transfer box is at normal operating temperature.

Checking/correcting transfer case oil level:

Undo oil filler plug (1).

Check transfer case oil level.

If necessary, pour in gear oil up to lower edge of opening for oil filler plug (1).

Installation:

Tightening torque: 27 00 11AZ, see 27 00 TRANSFER BOX IN GENERAL .

Replace sealing ring.

Place oil collecting apparatus underneath.

Fig. 1: Oil Filler Plug And Oil Drain Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Remove oil drain plug (2).

Drain and dispose of gear oil.

NOTE: Observe country-specific waste-disposal regulations

Replace sealing ring, screw in oil drain plug (2) and tighten down.

Tightening torque: 27 00 11AZ, see 27 00 TRANSFER BOX IN GENERAL .

Undo oil filler plug (1).

Pour in gear oil up to lower edge of opening for oil filler plug (1).

Tightening torque: 27 00 11AZ, see 27 00 TRANSFER BOX IN GENERAL .

Replace sealing ring.

10 TRANSFER CASE

27 10 ... CHECKING FUNCTION OF FRONT DIFFERENTIAL AND TRANSFER CASE

NOTE: **Fault diagnosis with DIS Tester.**
 Adhere to specified repair sequence in DIS.

27 10 010 REMOVING AND INSTALLING TRANSFER CASE (ATC 400 X-DRIVE)

Special tools required:

- 00 2 030
- 24 5 301
- 24 5 305

IMPORTANT: After replacement, the "Repair" service function must be carried out with GT1.

IMPORTANT: After completing work, check gear oil level and top up if necessary.

Filler plug (1):

Tightening torque: 27 00 11AZ, see 27 00 TRANSFER BOX IN GENERAL .

Gear oil level up to filler edge of filler plug (1).

Use only the approved gear oil.

Failure to comply with this requirement will result in serious damage to the transfer case!

Fig. 2: Oil Filler Plug And Oil Drain Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Necessary preliminary tasks:

- Remove complete exhaust system, see **18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM (M54)** .
- Remove heat shield.

Unfasten screws.

Tightening torque: 26 11 9AZ, see **26 11 PROPELLER SHAFT, COMPLETE** .

Remove front propeller shaft at output flange of transfer case and tie to one side.

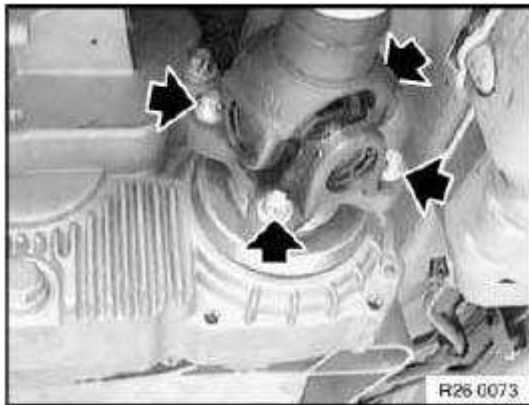

Fig. 3: Front Propeller Flange Shaft Screws
Courtesy of BMW OF NORTH AMERICA, INC.

- Remove propeller shaft from transmission.
- Release center bearing.
- Tie propeller shaft to one side.

Tasks are described in **26 11 000 REMOVING AND INSTALLING PROPELLER SHAFT (CARDAN UNIVERSAL JOINT) COMPLETELY** .

NOTE:

Automatic transmission:

Support transmission with special tools 00 2 030 / 24 5 301 / 24 5 305.

Manual transmission:

Support manual transmission with hydraulic lifter.

Fig. 4: Special Tools (00 2 030), (24 5 301) And (24 5 305)
Courtesy of BMW OF NORTH AMERICA, INC.

Unfasten screws and remove transmission cross-member.

Tightening torque: 27 00 10AZ, see **27 00 TRANSFER BOX IN GENERAL** .

Fig. 5: Transmission Cross-Member Screws
Courtesy of BMW OF NORTH AMERICA, INC.

Detach plugs (1) and (2) from servomotor.

Fig. 6: Plugs And Servomotor
Courtesy of BMW OF NORTH AMERICA, INC.

Release screw connection of transfer case.

Tightening torque: 27 00 9AZ, see **27 00 TRANSFER BOX IN GENERAL** .

Remove transfer case.

Installation:

Pay attention to dowel pin (1).

Grease dowel pin (1).

Apply a thin coat of grease to splines.

Grease: WEICON ANTI-SEIZE.

Fig. 7: Dowel Pin
Courtesy of BMW OF NORTH AMERICA, INC.

27 10 020 INSTALLING REPLACEMENT TRANSFER CASE (ATC 400 X-DRIVE)

IMPORTANT: After replacement, the "Repair" service function must be carried out with GT1.

Recycling:

Catch and dispose of escaping transmission oil. Observe country-specific waste-disposal regulations.

IMPORTANT: After completing work, check gear oil level and top up if necessary.

Filler plug (1):

Tightening torque: 27 2 7AZ, see 27 00 TRANSFER BOX IN GENERAL .

Gear oil level to lower edge of filler plug (1).

Use only the approved transmission oil.

Failure to comply with this requirement will result in serious damage to the transfer case!

Fig. 8: Oil Filler Plug And Oil Drain Plug
Courtesy of BMW OF NORTH AMERICA, INC.

Necessary preliminary tasks:

- Drain gear oil at oil drain plug, see 00 11 572 CHANGING OIL IN TRANSFER BOX (ATC 400/500) .

Tightening torque: 27 2 11AZ, see 27 00 TRANSFER BOX IN GENERAL .

- Remove transfer case, see 27 10 020 Installing replacement transfer case (ATC 400 X-Drive).

Convert following parts from previous transfer case to new transfer case.

- Covers and protective caps.
- Drive shaft transportation lock.
- Vent hose of transfer case.
- Vibration damper (M47T2).

Tightening torque: 27 2 12AZ, see 27 00 TRANSFER BOX IN GENERAL

- Rubber mount for transfer case mounting, replace if necessary, see **22 31 001 REPLACING RUBBER MOUNT FOR TRANSMISSION MOUNTING**

27 10 020 INSTALLING REPLACEMENT TRANSFER BOX (ATC 350)

Special tools required:

- 22 1 044
- 22 1 046
- 33 4 460

IMPORTANT: Before and after replacement, execute the "Repair" service function with the BMW diagnosis system.

NOTE: Recycling: Catch and dispose of escaping transmission oil. Observe country-specific waste disposal regulations.

Necessary preliminary tasks:

- Drain transmission oil at oil drain plug
- Tightening torque, 27 10 2AZ
- Remove transfer box

Modify following parts:

- Covers and protective caps
- Drive shaft transportation retainer
- Vent hose of transfer box

Bolt special tool 22 1 044 to transfer box. Insert special tool 22 1 046 with pins into opening of rubber mount. Draw in rubber mount with special tool 33 4 460.

Fig. 9: Bolt Special Tool 22 1 044 To Transfer Box
Courtesy of BMW OF NORTH AMERICA, INC.

Installation note: Pay attention to installation position of rubber mount (1).

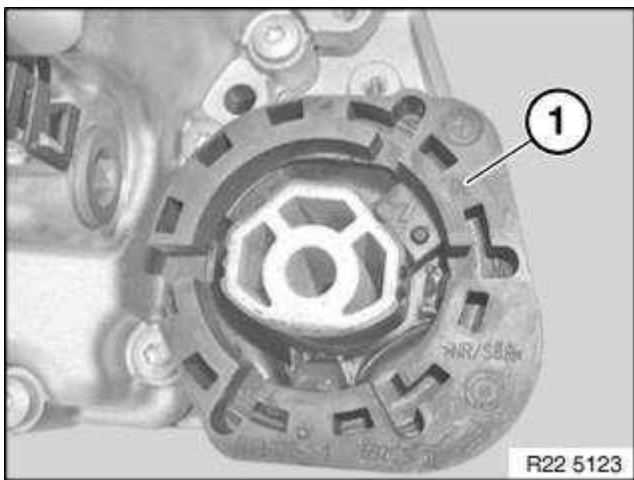

Fig. 10: Installation Position Of Rubber Mount (1)
Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT:

- After completing work, check transmission oil level and top up if necessary.
- Release filler plug (1).
- Check oil level.
- Tightening torque, see 27 10 11AZ in 27 00 TRANSFER BOX IN GENERAL .
- Pour in transmission oil up to lower edge of opening for filler plug (1).
- Use only the approved TRANSFER CASE OPERATING FLUIDS .

Fig. 11: Pour In Transmission Oil Up To Lower Edge Of Opening For Filler Plug (1)
Courtesy of BMW OF NORTH AMERICA, INC.

Failure to comply with this requirement will result in serious damage to the transfer box!

27 10 050 REPLACING OUTPUT FLANGE FOR FRONT AXLE OUTPUT (ATC 400/500 X-DRIVE)

IMPORTANT: Do not move vehicle with engine power once propeller shaft has been removed.

Replace output flange only in conjunction with a new radial shaft seal.

After completion of work, check transmission oil level, see 00 11 572

CHANGING OIL IN TRANSFER BOX (ATC 400/500)

Use only approved transmission oil.

Failure to comply with this requirement will result in serious damage to the transfer box!

Operation is identical to Replacing radial shaft seal for front axle output, see 27 21 030 Replacing radial shaft seal for front axle output (ATC 400/500 X-Drive).

27 10 700 REMOVING AND INSTALLING / REPLACING CONTROL UNIT FOR TRANSFER CASE

IMPORTANT: Read and comply with 61 35 ... NOTES ON ESD PROTECTION (ELECTRO STATIC DISCHARGE)

After installation:

- After replacement, the "Repair" service function must be carried out with GT1.
- Replacement only: Carry out programming/coding

In vehicles before 03/05 the old diagnosis algorithm and in vehicles after 03/05 the new diagnosis algorithm must always be activated by way of coding!

Necessary preliminary tasks:

- Remove front panel for luggage compartment floor, see 51 47 131 REPLACING FRONT TRIM FOR LUGGAGE COMPARTMENT FLOOR .

Unscrew nuts (1).

Unfasten plug connection and disconnect.

Remove control unit (2).

Fig. 12: Nuts And Control Unit

Courtesy of BMW OF NORTH AMERICA, INC.

27 10 710 REPLACING RESISTOR FOR SERVOMOTOR (ATC 400 X-DRIVE)

IMPORTANT: Delete previous resistance values when replacing the resistor.
Using BMW diagnosis system, work through test program in accordance with instructions.

Release screws and remove transmission cross-member.

Tightening torque: 27 00 10AZ, see **27 00 TRANSFER BOX IN GENERAL** .

Fig. 13: Transmission Cross-Member Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Detach plug (1) from resistor.

Release screw (3) and remove resistor.

Tightening torque: 27 00 14AZ, see **27 00 TRANSFER BOX IN GENERAL** .

Fig. 14: Plugs And Servomotor

Courtesy of BMW OF NORTH AMERICA, INC.

27 10 720 REPLACING SERVOMOTOR (ATC 400 X-DRIVE)

IMPORTANT: After replacement, the "Repair" service function must be carried out with GT1.

Necessary preliminary tasks:

- Remove complete exhaust system, see **18 00 020 REMOVING AND INSTALLING COMPLETE EXHAUST SYSTEM (M54)** .
- Remove heat shield.

Release screws and remove transmission cross-member.

Tightening torque: 27 00 10AZ, see **27 00 TRANSFER BOX IN GENERAL** .

Fig. 15: Transmission Cross-Member Screws

Courtesy of BMW OF NORTH AMERICA, INC.

Disconnect plugs (1 and 2).

Release screws and remove servomotor from transfer case.

Tightening torque: 27 00 13AZ, see 27 00 TRANSFER BOX IN GENERAL .

21 TRANSMISSION SHAFTS

27 21 010 REPLACING RADIAL SHAFT SEAL FOR DRIVE FLANGE (ATC 400/500 X-DRIVE)

Special tools required:

- 23 0 490 EXTRACTOR
- 27 1 390 DRIFT

IMPORTANT: After completion of work, check gear oil level and top up if necessary, see 00 11 572 CHANGING OIL IN TRANSFER BOX (ATC 400/500) and top up if necessary.
Use only approved gear oil in this transfer box.

Necessary preliminary tasks:

- Remove transfer box, see 27 10 010 Removing and installing transfer case (ATC 400 X-Drive).

Drive a hole into radial shaft seal (2) using a center punch (1).

IMPORTANT: Do not use a drill as drillings may result in transmission malfunction.

NOTE: Illustration shows NV125 transmission

Fig. 17: Driving A Hole Into Radial Shaft Seal
Courtesy of BMW OF NORTH AMERICA, INC.

Screw in special tool 23 0 490.

Drive out radial shaft seal (1) with impact weight (2).

NOTE: Illustration shows NV125 transmission

Fig. 18: Driving Out Radial Shaft Seal With Impact Weight

Add final details to vehicle.

Check oil level.

Check transmission for leaks.

27 21 020 REPLACING RADIAL SHAFT SEAL FOR OUTPUT FLANGE (ATC 400/500 X-DRIVE)

Special tools required:

- **23 0 490 EXTRACTOR**
- **27 1 400 DRIFT**
- **33 1 150 FIXTURE**

**IMPORTANT: After completing tasks, check gear oil level and top up if necessary, see 00 11 572 CHANGING OIL IN TRANSFER BOX (ATC 400/500) .
Use only approved gear oil in this transfer box.**

Necessary preliminary tasks:

- Remove transfer box, see **27 10 010 Removing and installing transfer case (ATC 400 X-Drive)**.

Release retaining ring (1).

Fig. 20: Retaining Ring
Courtesy of BMW OF NORTH AMERICA, INC.

Remove drive flange with special tool 33 1 150.

Fig. 21: Drive Flange And Special Tool (33 1 150)
Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Replace O-ring in output flange.

Check that O-ring is in correct position.

Fig. 22: O-Ring

Courtesy of BMW OF NORTH AMERICA, INC.

IMPORTANT: The propeller shaft may move when the output flange is pushed on. The retaining ring can thus no longer be fitted.

Installation:

Version: output shaft with mounting groove (1):

- Push on output flange
- Using 2 screwdrivers, press output flange downwards or output shaft (2) upwards until groove for retaining ring is completely visible.
- Fit retaining ring.

Fig. 23: Pressing Output Flange Downwards Or Output Shaft Upwards

Courtesy of BMW OF NORTH AMERICA, INC.

Installation:

Version: transmission output shaft without mounting groove:

- Support transfer box with a suitable sleeve (1) on transmission input shaft (2).
- Push on output flange
- Fit retaining ring.

Fig. 24: Sleeve And Transmission Input Shaft
Courtesy of BMW OF NORTH AMERICA, INC.

Drive a hole into radial shaft seal (2) using a center punch (1).

See illustration.

IMPORTANT: Do not use a drill as drillings may result in transmission malfunction.

Fig. 25: Radial Shaft Seal And Center Punch
Courtesy of BMW OF NORTH AMERICA, INC.

Screw in special tool 23 0 490.

Drive out radial shaft seal (1) with impact weight (2).

Fig. 26: Radial Shaft Seal, Impact Weight And Special Tool (23 0 490)
Courtesy of BMW OF NORTH AMERICA, INC.

Drive in radial shaft seal with special tool 27 1 400.

Courtesy of BMW OF NORTH AMERICA, INC.

Add final details to vehicle.

Check oil level.

Check transmission for leaks.

27 21 030 REPLACING RADIAL SHAFT SEAL FOR FRONT AXLE OUTPUT (ATC 400/500 X-DRIVE)

Special tools required:

- **23 0 490 EXTRACTOR**
- **27 1 410 DRIFT**
- 27 1 420

IMPORTANT: After completion of work check transmission oil level, see 00 11 572 CHANGING OIL IN TRANSFER BOX (ATC 400/500)
Use only the approved gear oil in this transfer box.

Necessary preliminary tasks:

- Remove reinforcement plate (E53 only), see 31 10 010 REMOVING AND INSTALLING/REPLACING REINFORCEMENT PLATE .
- Remove front propeller shaft, see REMOVAL & INSTALLATION .

Press out output flange (1) with a suitable tool (2) in direction of arrow.

Fig. 28: Pressing Out Output Flange With Suitable Tool
Courtesy of BMW OF NORTH AMERICA, INC.

Remove protective cap (1) with a screwdriver.

Fig. 29: Removing Protective Cap With Screwdriver
Courtesy of BMW OF NORTH AMERICA, INC.

Drive a hole into radial shaft seal (2) using a center punch (1).

See illustration.

IMPORTANT: Do not use a drill as drillings may result in transmission malfunction.

NOTE: Illustration shows E46 drive flange.

Fig. 30: Driving A Hole Into Radial Shaft Seal
Courtesy of BMW OF NORTH AMERICA, INC.

Screw in special tool 23 0 490.

Drive out radial shaft seal (1) with impact weight (2).

NOTE: Illustration shows E46 drive flange.

Add final details to vehicle.

Check oil level.

Check transmission for leaks.

GENERAL INFORMATION

Transmission Fundamentals - Overview

TRANSMISSION FUNDAMENTALS

STANDARD/AUTOMATIC TRANSMISSION COMPARISON

In today's modern vehicles, the automatic transmission has become a vital part of the powertrain. Automatic transmissions provide overall better fuel economy and efficiency while adapting to changing road conditions and driving habits. Standard transmissions offer more driver interaction with the vehicle, however automatic transmissions reduce driver fatigue and increase safety by shifting automatically. Automatic transmissions also offer improved driveability in stop and go traffic. If there is a disadvantage to an automatic transmission, it would be complexity and cost of manufacturing.

G03403720

Fig. 1: Identifying Standard Transmission
Courtesy of BMW OF NORTH AMERICA, INC.

G03403721

Fig. 2: Identifying Automatic Transmission
Courtesy of BMW OF NORTH AMERICA, INC.

- Drive torque must be interrupted to change gears.
- Higher loads on driveline from abrupt clutch application.
- Clutch must be disengaged when vehicle is stopped to prevent stalling.
- High radial loads on housing.
- Gear set design requires more space than planetary type.
- Requires some Maintenance (clutch).
- Requires driver intervention for shifting.
- Gear teeth are in constant mesh due to planetary design.
- Smoother application of drive torque reduces loads on driveline.
- Due to fluid coupling in the torque converter, transmission can stay in gear when vehicle is stopped.
- Minimal radial loads on housing.
- Compact design of gear set. Space requirement is minimized.
- Maintenance free operation. (Lifetime fluid and no clutch).
- Automatic shifting reduces driver fatigue and increases safety.

HYDRAULIC TRANSMISSION VS. ELECTRO-HYDRAULIC TRANSMISSION

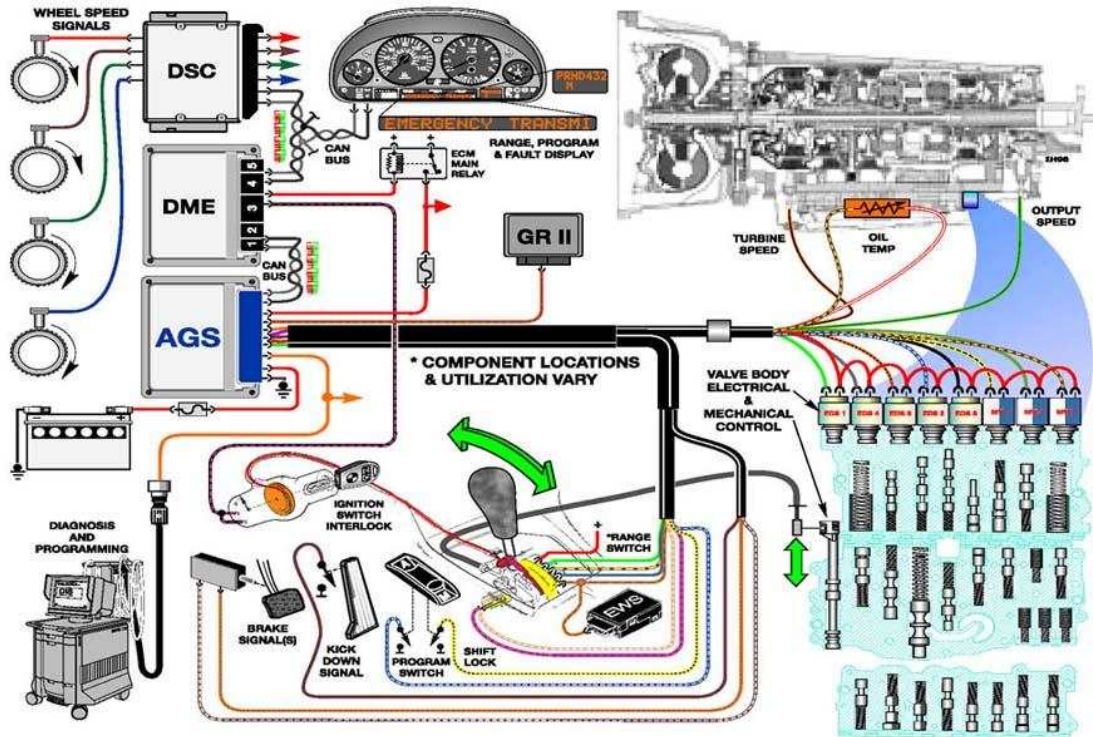

Since the introduction of the automatic transmission there have been numerous refinements to improve shift comfort as well as fuel economy. Early automatic transmissions used only hydraulic control, there was no

electronic intervention. In 1986 BMW introduced their first EH (Electro-Hydraulic) transmission into production vehicles.

The acronym EGS is used by BMW for its electronic transmission control system. EGS stands for "Electronic Transmission Control" which comes from the German words "Elektronisch Getriebe Steuerung". In order to comply with SAE terminology we will refer to the EGS control module as the TCM "Transmission Control Module".

EH controlled transmissions allow for optimized shift points by closely monitoring changing conditions. Engine speed, road speed and throttle angle are some of the inputs that are monitored by the TCM to determine optimal shift points. The TCM will then process this information and control shift point via electronic solenoids mounted on the valve body.

With the introduction of Adaptive Transmission Control, shift comfort and fuel economy was further improved. The TCM now monitors throttle angle deviations, wheel speeds and CAN Bus information to fine tune shift points.

TRANSMISSION IDENTIFICATION

BMW automatic transmission are manufactured by two suppliers for the US market:

- **Zahnradfabrik Friedrichshafen:** Commonly referred to as ZF. ZF manufactures both manual and automatic transmissions.

- **GM Powertrain - Hydramatic:** Hydramatic is a manufacturing division of General Motors located in Strasbourg France. Hydramatic supplies automatic transmissions to BMW for four and six-cylinder vehicles.

BMW has developed an internal numbering system for their transmissions for parts ordering, information research and identification. Also each manufacturer uses their own internal identification system. Here is a breakdown of these identification codes:

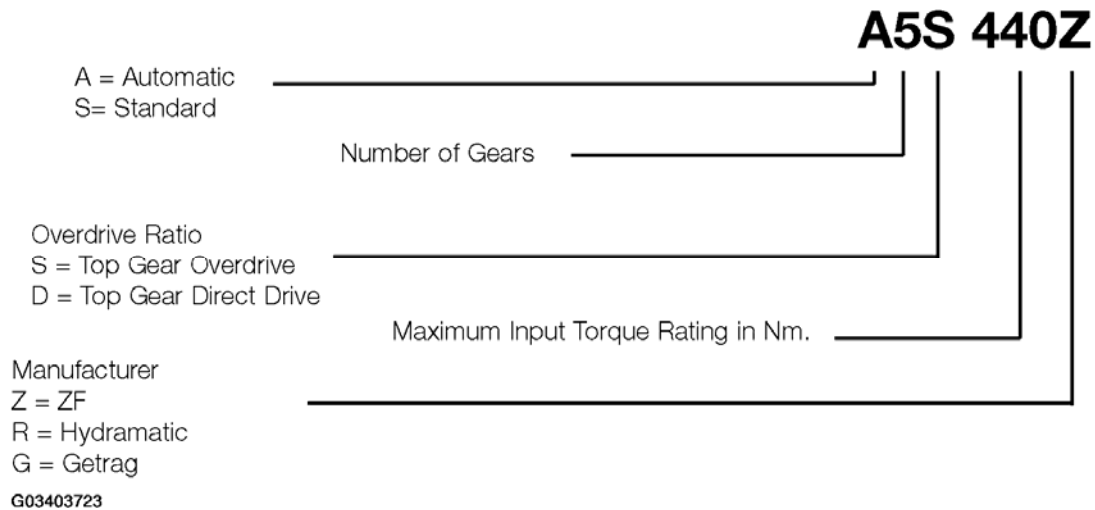

Fig. 4: Identifying BMW Identification Code Breakdown
Courtesy of BMW OF NORTH AMERICA, INC.

Fig. 5: Identifying ZF Identification Code Breakdown

TRANSMISSION HYDRAULICS

Transmission Fluid (Oil)

The automatic transmission provides pressure regulated hydraulic fluid which is filtered for all of the transmissions functional requirements. All BMW automatic transmissions are designed to operate with specific

fluids. Use of non-approved oil will cause malfunctions and irreparable transmission damage which is not covered by BMW warranty.

The transmission fluid provides the following functions:

- Lubricates mechanical components (planetary gears, bearings etc.).
- Removes heat and transfers heat to transmission cooling system. (Heat Exchanger).
- Removes debris and contaminants to sump and filter when circulated.
- Provides a transfer of kinetic energy in the torque converter.
- Allows hydraulic operation of mechanical components (clutches, brakes) via control of the valve body.

Also, transmission fluid has various properties to prevent oxidation and breakdown from heat and friction. Each type of transmission fluid has properties specific for each transmission application.

Fluid level is crucial in the proper operation of an automatic transmission. Improper fluid levels will cause improper operation and eventually irreparable transmission damage. Improper fluid level can cause:

- A low fluid level can cause an interruption in oil flow during fast acceleration or hard braking which can cause gear shift malfunctions.
- An excessively high fluid level can cause the rotating mechanical components to paddle in the oil. This produces foam which introduces air into the hydraulic system.
- A low fluid level can also cause transmission overheating causing premature transmission failure.

G03403725

Fig. 6: Identifying Transmission Fluid Flow
Courtesy of BMW OF NORTH AMERICA, INC.

There are numerous types of transmission fluid used in BMW transmissions. With the exception of the early transmissions (4HP22/24, A4S310/270R and the A5S310Z) all current BMW transmissions use "Lifetime Fill" transmission fluid. There is no maintenance required for these transmissions. It is important to use the correct fluid. Incorrect use of the transmission fluid can cause non-warrantable transmission damage.

When performing repairs on transmissions with lifetime fluid, it is important to drain the transmission fluid in to a clean container for re-use. New fluid should only be used for transmission replacement and for topping off after repairs.

Also, transmission fluid level is vital to the proper operation of the transmission.

TORQUE CONVERTER

In standard transmissions the crankshaft is linked to the transmission input shaft via the clutch assembly. Power flows from the crankshaft through the flywheel. The pressure plate transfers power to the clutch disc which is splined to the transmission input shaft. The pressure plate is used to disconnect (or interrupt) power flow to the transmission input shaft. Because the engine is mechanically connected to the driveline, power flow must be interrupted when the vehicle is stationary. Otherwise the engine would stall.

In automatic transmissions, there is a fluid coupling between the engine and transmission. This fluid coupling is more commonly referred to as the torque converter. In the torque converter there is no rigid connection between

the engine and transmission (Except for lock up clutch). In order to understand the operation of the torque converter, we must first start with the components.

The breakdown of the components are as follows:

- The Impeller (1), which is rigidly connected to the torque converter housing.
- The Turbine (2) which is splined to the input shaft (turbine shaft) of the transmission.
- The Stator (3) which has a one-way clutch. The inner race of the one-way clutch is splined to a stationary shaft attached to the transmission.

G03403726

Fig. 7: Identifying Torque Converter Components
Courtesy of BMW OF NORTH AMERICA, INC.

The addition of the stator allows the fluid coupling to be referred to as a torque converter. The stator provides for a multiplication of torque at low speeds. Without the stator there would be no multiplication of torque.

When the engine is running, the impeller which is directly connected to the converter housing, rotates at engine speed. Fluid is directed from the impeller blades to the turbine blades. The fluid drives the turbine which is splined to the input (turbine) shaft of the transmission. This functions the same way as a waterfall acting on a

paddle wheel. The ratio of the impeller speed to turbine speed is approximately 1.1 to 1. This ratio is improved to 1:1 with the addition of the torque converter clutch which is discussed later.

Torque Converter

Torque Converter Operation At Low Speeds

1. At low engine speeds there is a large difference in rotational speed between the impeller and the turbine
2. Fluid flow is directed from the impeller to the turbine. Fluid strikes the vanes of the turbine. The turbine is driven forward in the direction of engine rotation.
3. Fluid flow is then directed back towards the impeller.
4. Before the fluid reaches the impeller, the fluid strikes the vanes of the stator.
5. When the fluid strikes the stator, the one way clutch prevents the stator from rotating.
6. The fluid is then re-directed by the curved vanes of the stator. The fluid is now flowing in the same direction as the impeller.
7. The fluid that is acting on the impeller increases the force on the impeller which multiplies torque.

G03403727

Fig. 8: Identifying Torque Converter Operation At Low Speeds
Courtesy of BMW OF NORTH AMERICA, INC.

Torque Converter Operation At High Speed

1. As engine speed increases, the turbine speed approaches the speed of the impeller.
2. The fluid flow is directed from the turbine to the back side of the impeller blades.
3. The one-way clutch in the stator unlocks and the stator blades turn in the direction of engine rotation.

4. Fluid is no longer re-directed and torque multiplication no longer takes place.
5. This is referred to as "Coupling Speed". The turbine never reaches the same speed as the impeller as fluid flow would come to a halt. Ratio is approximately 1.1 to 1.

G03403728

Fig. 9: Identifying Torque Converter Operation At High Speed
Courtesy of BMW OF NORTH AMERICA, INC.

TORQUE CONVERTER CLUTCH

Since the efficiency of the torque converter at coupling speed is approximately 1.1 to 1, fuel economy is compromised. To offset this a torque converter clutch was added on EH controlled transmissions. The torque converter clutch locks the turbine to the converter housing. This creates a mechanical coupling with a ratio of 1:1. This can only be achieved at higher engine speeds, the torque converter clutch must be disengaged at low engine speeds to prevent stalling.

There are two methods for controlling the torque converter clutch on BMW transmissions:

- **A4S310/270R, 4HP22/24 EH, A5S310Z** - These transmission use an on/off control method to lock and unlock the torque converter. The TCC is either completely engaged or completely disengaged. This method of engagement provides an abrupt sensation when the TCC is locking and unlocking. This abrupt sensation can be unpleasant and undesirable to some drivers.
- **A5S560Z, A5S440Z, A5S325Z, GA6HP26Z, A5S360/390R** - These transmissions use a gradual approach to TCC control. The TCC is gradually applied and released, this method reduces the abrupt feel of the on/off type TCC. The TCC solenoid is controlled by pulse width modulation. This allows fluid to be gradually introduced and released to the TCC.

The TCC is spring loaded to the engaged position. Pressurized fluid releases the TCC, when the pressurized fluid is released, the TCC is engaged. Depending on transmission application, the TCC can be engaged in 3rd, 4th or 5th gear. The TCC must be disengaged at low speeds to prevent stalling.

OIL PUMP

The transmission oil pump is used to circulate oil and provide pressure for hydraulic operation.

The pump is driven by the torque converter shell and rotates with engine. Fluid is drawn from the sump through the filter and distributed to the various transmission hydraulic systems.

The output pressure is regulated to an operating pressure of approximately 25 bar.

G03403732

Fig. 13: Identifying Transmission Oil Pump Location
Courtesy of BMW OF NORTH AMERICA, INC.

Currently there are two types of oil pumps used in BMW transmissions; Crescent type and Vane type.

Crescent Type Oil Pump (All Except A5S360/390R)

The crescent type is an internal gear pump containing a drive gear and a driven gear. The inner gear is driven by the torque converter and acts as the impeller. The outer gear is driven by the inner gear.

The gap between the teeth varies from the input, through the crescent and to the output of the pump.

A low pressure area is created on the input side of the pump by the widening gap between the gear teeth.

The oil is drawn to the crescent and transferred to the output side of the pump, where the pressure is increased by the narrowing gap between the gear teeth.

The output pressure of the pump is controlled by spring loaded pressure regulator.

G03403733

Fig. 14: Identifying Crescent Type Oil Pump (All Except A5S360/390R)
Courtesy of BMW OF NORTH AMERICA, INC.

Oil Volume Control

On the A5S440Z transmission, oil pump output volume is controlled based on engine RPM. High oil volume is initially required at start up to quickly fill the transmission requirements. As engine RPM increases, the volume is greater than is required. The Oil Volume Control Damper regulates the pump output volume based on engine RPM. This helps improve fuel economy by reducing the load on the engine at high RPM.

Vane Type Pump (A5S360/390R)

The new A5S360/390R (GM5) transmission uses a vane type pump. The torque converter drives the pump rotor and 13 vanes.

The rotor and vanes are placed inside a slide mechanism. As the rotor spins, the vanes sweep oil from the pump intake to the output along the mating surface on the vane ends and the interior surface of the slide.

The slide is mounted on a pivot pin. As it pivots, it changes the eccentricity of the rotor to slide mating surface. This in turn will alter the output oil volume. This provides the same function as the Oil Control Volume Damper on the A5S440Z.

The slide's position is influenced by a calibrated spring and hydraulic control pressure from the main pressure regulator solenoid on the valve body.

G03403734

Fig. 15: Identifying Vane Type Pump (A5S360/390R)
Courtesy of BMW OF NORTH AMERICA, INC.

The benefit of changing the slide position is to optimize pump output volume to meet the following operating conditions:

- Provide maximum volume during engine start-up. This condition provides a fast priming action of the pump for immediate lubrication and for hydraulic pressure operation.
- Regulated output volume at higher engine speeds. Maximum pump volume is not required at all times.

Fig. 16: Identifying Rotary Vane Pump

HYDRAULIC CONTROL COMPONENTS

Electro/Hydraulic Valve Body

The valve body assembly is the main shift control element in the transmission. In non-EH transmissions the valve body was only hydraulically controlled. In the current EH (electrohydraulic) transmissions the valve body is similar in design, but now also housing a number of shift solenoids which are controlled by the TCM.

The valve body consists of a number of sub-assemblies. Each sub-assembly contains a number of spool valves which are hydraulically controlled. Most spool valves are opposed by spring pressure. The spool valves are used to direct hydraulic fluid flow to the various shift elements in the transmission. There is also a manual valve which is connected to the shift assembly by a cable. The manual valve allows the drivers to select the basic operating mode (or ratio).

The valve body is responsible for the following:

- Regulating Main Pressure
- Controlling fluid flow to shift elements for Upshifts and Downshifts.

- Providing for manual operation by driver via manual valve.
- Reverse Lockout
- Fail-safe Operation
- Shift Comfort through: Overlap Shift Control (ZF) Pressure Accumulators (GM)
- Torque Converter Control
- Distribution of lubrication.

G03403736

Fig. 17: Identifying Electro/Hydraulic Valve Body
 Courtesy of BMW OF NORTH AMERICA, INC.

Shift valves are used to direct application pressure to the various shift elements. Shift valves are regulated by spring pressure and control pressure for the shift solenoids. Shift valves come in various configurations depending upon application and transmission type. The most basic is the 3/2 shift valve. The 3/2 shift valve has 2 positions which are switched through one or two control pressures.

With no control pressure from shift solenoid present, the shift valve is moved to its end travel (left) by spring pressure.

Operating pressure is blocked to the shift component. Also in this position any application pressure is drained from the shift component.

Fig. 18: Identifying Blocked Operating Pressure To Shift Component
Courtesy of BMW OF NORTH AMERICA, INC.

Once the control pressure is applied to the 3/2 shift valve, the shift valve moves to the right.

This allows operating pressure to reach the shift component.

When the control pressure is again reduced, spring pressure returns the 3/2 shift valve to the rest position. This drains and operating pressure from the shift component.

G03403738

Fig. 19: Identifying Operating Pressure To Reach Shift Component
 Courtesy of BMW OF NORTH AMERICA, INC.

The example shown at right is a 4/2 shift valve. The operation is similar to the 3/2 valve. The primary difference is that the 4/2 shift valve affects 2 shift components.

G03403739

Fig. 20: Identifying Primary Difference 4/2 Shift Valve Affects 2 Shift Components
 Courtesy of BMW OF NORTH AMERICA, INC.

PRESSURE REGULATION

Pressurized oil from the pump must be regulated for use within the transmission. Otherwise, the high pressure directly from the pump would influence shift quality. The shifts would be more abrupt and harsh. In order to "fine tune" the pressures within the transmission, there is a pressure regulating valve and a pressure regulating solenoid. The pressure regulating valve is located in the oil pump housing or the valve body dependent upon transmission type.

The pressure regulating solenoid is a pulse width modulated (PWM) solenoid. Current is controlled by the TCM. The pressure regulating solenoid is normally closed, there is maximum line pressure available when minimum (or no) current is applied to the pressure regulating solenoid. Depending upon application, pressure regulating solenoid can be PWM with B- or B+ control. GM transmissions use B+ control with a constant ground supply. ZF transmissions uses B- control with a constant B+ supply.

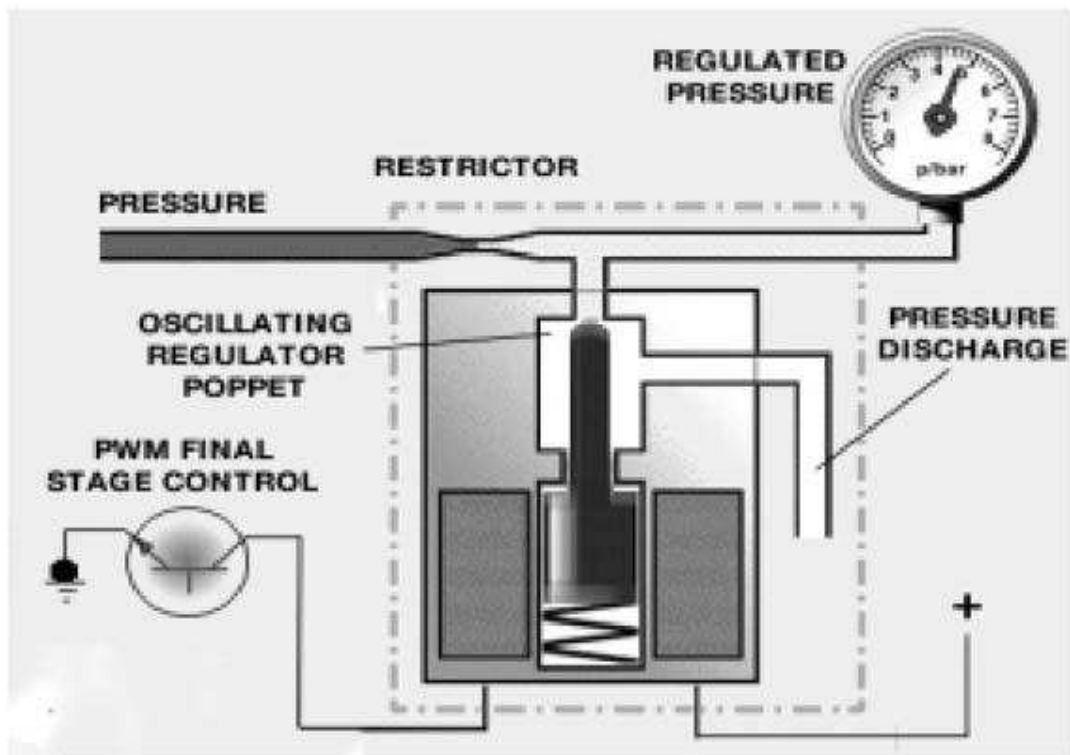

There are also pressure regulators used in ZF transmissions that are used to control shift pressures. The A5S440Z and A5S560Z both use EDS solenoids for "Overlap Shift Control" this will be explained later in this text.

There are a few different names for pressure regulating solenoids depending upon the transmission type and manufacturer:

- ZF transmissions use the following terms - EDS solenoid (valve), or MV (magnetic valve).
- Hydramatic (GM) transmissions use the following terms: DR solenoid, Force Motor Solenoid or Variable Bleed Solenoid.

Transmission operating pressures are regulated based on engine speed, throttle angle and engine load. The regulated pressure from the pressure regulating solenoid is referred to as throttle pressure. This pressure is fed to

the main pressure regulating valve.

G03403740

Fig. 21: Identifying Transmission Operating Pressures
Courtesy of BMW OF NORTH AMERICA, INC.

Pressure Regulation

G03403741

Fig. 22: Identifying Pressure Regulation
 Courtesy of BMW OF NORTH AMERICA, INC.

As the diagram shows, regulating valve pressure is fed to the pressure regulating solenoid. This pressure is then regulated to create throttle pressure. Throttle pressure is modified based on throttle angle, engine speed and engine load. Throttle pressure is then fed to the pressure regulating valve. As throttle pressure increases, the regulating valve piston is moved to the left (with respect to the diagram). As the regulating valve piston is moved to the left, operating pressure is increased to the 4/2 shift valve. The operating pressure to the 4/2 shift valve will be fed to Shift Component A or Shift Component B depending the position on the 4/2 shift valve. The operating pressure to the shift components will be increased or decreased depending upon the throttle valve pressure. As engine speed and load are increased, the operating pressure will be increased to provide higher clamping forces on the shift components.

When there is no electrical power present to the pressure regulator solenoid, throttle pressure will be a maximum. Therefore maximum operating pressure will be available at the 4/2 shift valve. This condition would exist if the transmission was operating in fail-safe mode.

APPLY COMPONENTS

Multi - Plate Clutches And Brakes

Multi Plate Clutches and Brakes are used to drive or hold members of the planetary gear set. As a general rule, Multi Plate Clutches connect one planetary member to another. Multi Plate Brakes connect a planetary member

to the case to hold it stationary.

The clutches and brakes consist of a number of friction discs and steel discs. The friction discs are coated with a friction material and have engaging lugs (splines) on the inner perimeter. The steel discs are steel on both sides and have engaging lugs located on the outer perimeter. The engaging lugs on the friction discs are usually engaged with a planetary member. The engaging lugs on the steel discs are usually engaged with the clutch piston housing.

In addition to the friction and steel discs, there is also an apply piston, housing and return spring. Once hydraulic fluid is applied to the clutch assembly, the friction discs and steel discs will be locked together. Once hydraulic pressure is released, the return spring will cause the clutch piston to return to its rest position which will unlock the clutch assembly.

G03403742

Fig. 23: Exploded View Of Multi - Plate Clutches
Courtesy of BMW OF NORTH AMERICA, INC.

G03403743

Fig. 24: Identifying Friction Discs And Steel Discs
 Courtesy of BMW OF NORTH AMERICA, INC.

Multi - Plate Clutch Operation

In order to carry out a shift in ratio, fluid needs to be applied or released from the Multi - Plate Clutch (or Brake). As shown in the example , the following sequence occurs:

1. Fluid from a shift valve in the valve body is applied to the clutch assembly. (Figure A, see **Fig. 25.**)
2. Fluid pressure builds behind the apply piston and overcomes the resistance from the diaphragm spring. (Figure A, see **Fig. 25.**)
3. The friction and steel discs are compressed together and become locked, preventing any slippage between them. (Figure A, see **Fig. 25.**)
4. Two planetary members are now locked together.
5. When fluid pressure is released, the steel and friction discs are allowed to unlock. (Figure B, see **Fig. 25.**)
6. The diaphragm spring pushes against the apply piston and returns the piston back to the rest position. (Figure C, see **Fig. 25.**)
7. The check ball in the apply piston is unseated by centrifugal force which allows the clutch to drain completely.

Fig. 25: Identifying Multi - Plate Clutch Operation
Courtesy of BMW OF NORTH AMERICA, INC.

Band Brakes

On some BMW transmissions there is a band type brake used for some applications. The A4S270/310R and the A5S310Z use a band type brake. The brake band is a circular band with friction material bonded to the inner surface. The band wraps around a particular planetary component (clutch drum) and locks that component to the transmission case. The brake band is applied and released by the clutch apply piston.

The brake band is not adjustable on the A5S310Z, however there is some adjustment allowed when needed on the A4S270/310R.

The brake band functions in the following manner on BMW transmissions:

- **A4S270/310R** - The brake band is active (applied) in first and second gear. The brake band holds the reaction sun drum stationary. The reaction sun drum is splined to the reaction sun gear.
- **A5S310Z** - The brake band is active (applied) in second, third and fifth gear. The brake band holds the forward sun gear to the case.

Fig. 26: Identifying Band Brakes
Courtesy of BMW OF NORTH AMERICA, INC.

One-Way Clutches (Freewheel)

The one way clutch consists of an inner and outer ring with a locking device between the two. The one way clutch is designed to lock in one direction and to allow free rotation in the other direction. Currently there are two types of one way clutches used in BMW transmissions:

- Roller type which consists of spring loaded rollers between the inner and outer race of the one way clutch. (Roller type is also used without springs on some applications)
- Sprag type which consists of asymmetrically shaped wedges located between the inner and outer race of the one way clutch.

G03403746

Fig. 27: Identifying Roller Type One Way Clutch
Courtesy of BMW OF NORTH AMERICA, INC.

G03403747

Fig. 28: Identifying Sprag Type One Way Clutch
Courtesy of BMW OF NORTH AMERICA, INC.

In both versions of the one way clutch (freewheel), rotation is only allowed in one direction. Using the diagrams above, imagine that the inner races were locked stationary. The outer race would only be allowed to turn counter clock wise. In the clock wise direction, the outer race of both versions would be locked. In the roller type, the helper springs would push the rollers up the ramp on the outer race. This would force the rollers in to the smaller area which would cause the outer race to lock, In the sprag type, the asymmetrical wedges would lock between the inner and outer race.

The one way clutches are used in the transmission to prevent an interruption of drive torque during certain gear shifts and to allow engine braking during coasting. Also there is a one way clutch in the stator of the torque converter.

PLANETARY GEAR SET

Planetary gear sets are compact gear units that receive input drive torque and provide the required output ratios for all forward gears and reverse gear. The planetary gear set consists of four main components:

1. Internal Ring Gear
2. Planetary Gears (pinions)
3. Sun Gear
4. Planetary Gear Carrier

G03403748

Fig. 29: Identifying Planetary Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Various ratios are obtained by driving or holding different components in the planetary gear set. The example shown at right is a simple planetary gear set. Today's modern transmissions use a combination of multiple planetary gear sets referred to as a compound planetary gear set.

Advantages Of Planetary Design

There are distinct advantages to the planetary gear set in comparison with a standard transmission gear set.

Primarily, drive torque does not need to be interrupted to change gears. The planetary members are in constant mesh and there are more teeth engaged in any given ratio. This allows more torque to be transferred through the transmission.

Basic Power Flow

In the example shown at left, let's follow through an example of power flow in reverse gear:

The Planetary gear carrier (4) is held stationary. The sun gear (3) is driven in a clockwise direction. The planetary pinions (2) are driven counterclockwise, which in turn drives the internal ring gear (1) counterclockwise as well.

G03403749

Fig. 30: Identifying Basic Power Flow
Courtesy of BMW OF NORTH AMERICA, INC.

COMPOUND PLANETARY GEAR SETS

Compound planetary gear sets use multiple planetary components which are a variation on the simple planetary gear set. Since the inception of the simple planetary gear set, there have been numerous compound gear sets introduced. BMW transmissions use the following gear sets:

- Simpson Gear Set - used on 4HP22 and 4HP24

- Ravigneaux Gear Set - used on A4S270R, A4S310R, A5S310Z, A5S325Z, A5S360R and A5S390R.
- Wilson Gear Set - used on A5S440Z and A5S560Z
- Lepelletier Gear Set - used on the GA6HP26Z.

Simpson Gear Set

The Simpson Gear Set is one of the early variations on the simple set. It is capable of 3 forward gears and one reverse. On BMW transmissions, the Simpson Gear set is used in the 4HP transmission which is a four speed automatic. Fourth gear (overdrive) is obtained by the addition of an auxiliary gear set (simple).

Characteristics of the Simpson Gear set are as follows:

- Two Internal Ring Gears, one rear input ring and one attached to the rear planetary carrier.
- Two Planetary carriers, each containing three planetary pinions.
- One common Sun gear, which meshes with both sets of planetary pinions.

G03403750

Fig. 31: Identifying Simpson Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Ravigneaux Gear Set

A new variation on the planetary design is the Ravigneaux gear set. This gear set is capable of 4 forward gears and one reverse. However, depending upon application it may be used with an auxiliary gear set. Here are some examples:

- A4S310/270R uses the Ravigneaux set for 3 forward gears and one reverse. Overdrive is obtained by the auxiliary gear set.
- A5S310Z uses a combination of the Ravigneaux gear set and the auxiliary gear set to obtain 5 forward gear and one reverse. First, second and reverse gears are achieved by using a combination of both gear sets.
- The A5S360/390R uses a modified version of the ravigneaux set that provides five forward gears and one reverse. There is no auxiliary gear set used.

Characteristics of the Ravigneaux Gear Set are:

NOTE: **The Ravigneaux Gear Set shown below is a typical representation, refer to Fig. 32. There are a few variations of this arrangement used on BMW transmissions.**

- One planetary carrier which is common to both sets of planetary pinions.
- Two sets of planetary pinions, one long set with small diameter and one short set with large diameter.
- Two sun gears, one input sun gear and one reaction sun gear.
- One common ring gear.

G03403751

Fig. 32: Identifying Ravigneaux Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Wilson Gear Set

On BMW transmissions, the Wilson gear set is only used on the A5S440Z and A5S560Z. The Wilson Gear Set consists of three planetary gear sets.

The ring gear of the first gear set, the planetary carrier of the second gear set and the ring gear of the third planetary gear set and directly connected to the "Pot". The "Pot" is a cylindrical device that slides over all of the components to unitize the individual gear sets into an assembly.

The characteristics of the Wilson Gear Set are:

- Three planetary carriers.
- Three ring gears, with ring gear 1 and 3 meshed to "Pot" assembly.
- Three sun gears, sun gear 2 and 3 are common. (Attached). Sun gears 2 and 3 are also referred to as the "Double Sun Gear"

Fig. 33: Exploded View Of Wilson Gear Set
Courtesy of BMW OF NORTH AMERICA, INC.

Lepelletier Gear Set

The Lepelletier Gear Set was introduced to BMW on the ZF GA6HP26Z. This gear set allows for 6 forward speeds and one reverse gear using a light weight design. The planetary gear train consists of a single carrier planetary gear train and a downstream double planetary gear train.

1. Internal Ring Gear 1
2. Planet Gear (pinion)
3. Planet Carrier
4. Planet Carrier

PLANETARY GEAR SET OPERATION

In order to understand planetary gear set operation, it is important to understand some basic rules of operation.

- It is assumed that engine rotation is clockwise when referring to power flow charts and diagrams.
- Planetary pinions will always rotate in the same direction as the internal ring gear.
- When the sun gear is driven clockwise and the planetary carrier is held stationary the internal ring gear will rotate counter clockwise (reverse gear).
- When two or more planetary members are locked together, the assembly will rotate together. The ratio from input to output is 1:1.
- When the sun gear is held stationary and the planetary carrier is driven clockwise, the ring gear will be driven clockwise in an overdrive ratio. (i.e. .75:1)

When trying to understand power flow schematics, it is important to be able to draw a comparison between the actual planetary components and the schematic symbols. The diagram below outlines the relationship between these components and the power flow schematic. The schematic is a representation of a cross section of the transmission, but you only see the top half of the cross section. The transmission is shown as though it has been quartered lengthwise.

Power Flow Schematic

In order to understand power flow schematics, a relationship must be drawn between the actual components and the schematic representation. In our example, we are going to use the 4HP22/24 power flow schematic. The

4HP22/24 transmission uses a Simpson Planetary Gearset and an auxiliary gearset. The auxiliary gear set is a simple planetary gearset.

G03403757

Fig. 38: Identifying Power Flow Schematic

Fig. 39: Identifying Power Flow Schematic - First Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Power flow in first gear - Drive torque is applied to the torque converter impeller and transferred to the turbine. The turbine shaft rotates clockwise (CW). The "A" clutch locks the turbine shaft to the rear input ring gear. The rear input ring gear rotates CW driving the rear planet pinions CW. The planetary pinions drive the common sun gear CCW, which in turn drive the front planet pinions CW. The front planetary carrier is held from rotating CCW by one way clutch "J". The front planetary pinions which are rotating CW drive the front ring gear/rear carrier CW. The rear planetary carrier is rotating CW and is driving the planetary carrier from the auxiliary gear set. The "E" clutch in the auxiliary gear set is holding the Sun gear and the ring gear together. Therefore the auxiliary gear set is locked in a 1:1 ratio.

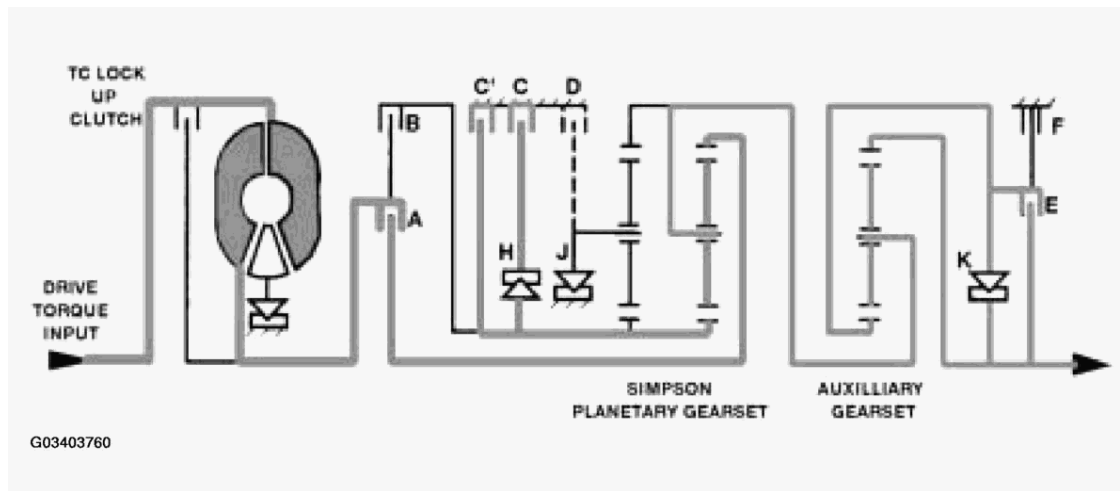

One Way Clutch "J" is locked prevent the front planetary carrier from rotating CCW. One Way Clutch "H" is not used and One Way Clutch "K" is locked. One way clutch "K" is used to prevent an interruption in power flow before the "E" clutch is locked during the 4-3 shift.

POSITION GEAR	D				3				2			1	R

Second Gear

G03403760

Fig. 41: Identifying Power Flow Schematic - Second Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Second Gear - Drive torque is applied to the torque converter impeller and transferred to the turbine. The turbine shaft rotates clockwise (CW). The "A" clutch locks the turbine shaft to the rear input ring gear. The rear

input ring gear rotates CW driving the rear planet pinions CW. The sun gear is held stationary by the C' clutch. The rear planet pinions rotate around the fixed sun gear CW. The rear planetary carrier will rotate CW. The rear planetary carrier will drive the auxiliary gear set will rotate as a complete unit. The auxiliary gear set is locked in a 1:1 ratio due to the "E" clutch locking the sun and ring gear together.

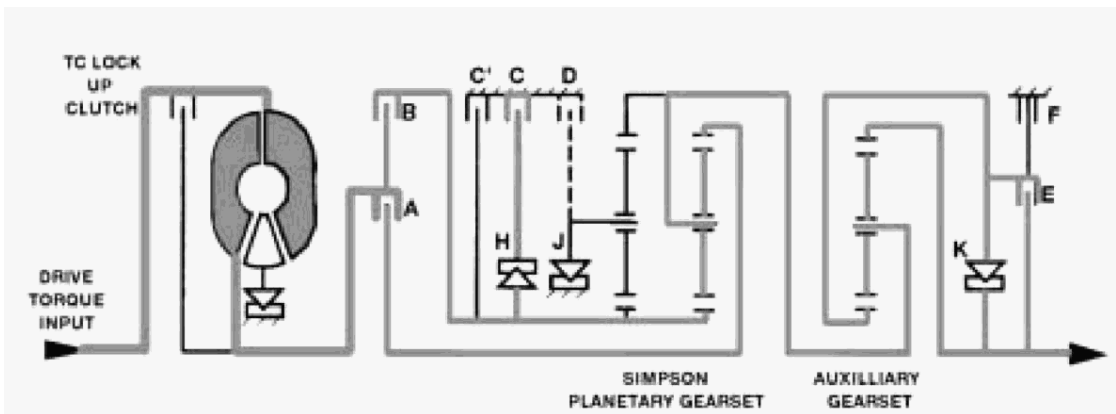

The "C" clutch is locking the outer race of the "H" freewheel to the case. This is used for the 3/2 downshift. Freewheel "J" is not active and Freewheel "K" is locked.

POSITION GEAR	D				3			2			1	R
	1	2	3	4	1	2	3	1	2	1	R	
Clutch A	X	X	X	X	X	X	X	X	X	X

Third Gear

G03403762

Fig. 43: Identifying Power Flow Schematic - Third Gear
 Courtesy of BMW OF NORTH AMERICA, INC.

Third Gear - Drive torque is applied to the torque converter impeller and transferred to the turbine. The turbine shaft rotates clockwise (CW). The "A" clutch and the "B" clutch are locked, this causes the rear input ring gear to be locked to the sun gear in the Simpson Gear set. The Simpson gear set is locked in a 1:1 ratio. The "E" clutch is locked which locks the ring gear to the sun gear in the Simpson gear set. The entire transmission planetary system is now locked in a 1:1 ratio.

Freewheel "H" is overrun and freewheel "J" is not used. Freewheel "K" continues to be locked.

POSITION GEAR	D				3				2			1	R
	1	2	3	4	1	2	3	1	2	1			R
Clutch A	X	X	X	X	X	X	X	X	X	X			
Clutch B			X	X			X						X
Clutch C'		X				X			X				
Clutch C		X	X	X		X	X		X

Fourth Gear

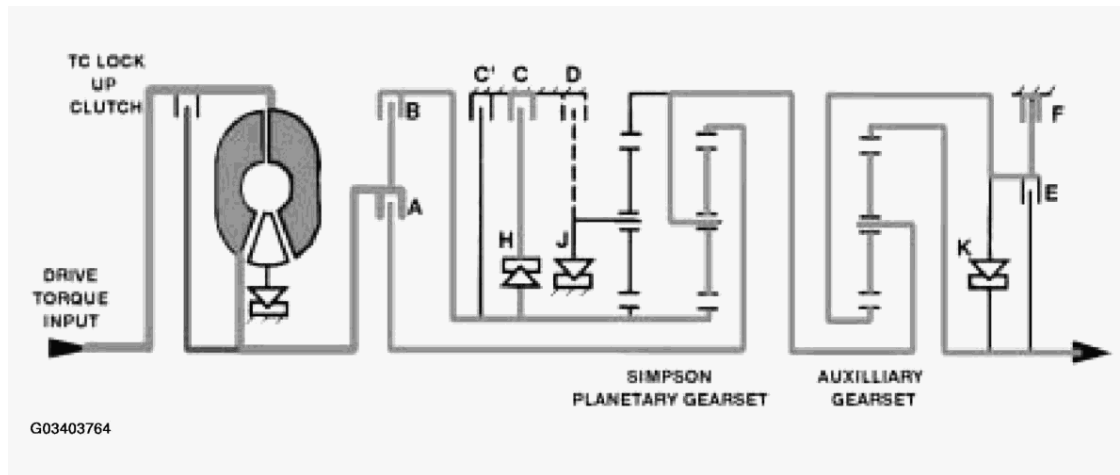

Fig. 45: Identifying Power Flow Schematic - Fourth Gear
Courtesy of BMW OF NORTH AMERICA, INC.

Fourth Gear - Drive torque is applied to the torque converter impeller and transferred to the turbine. The turbine shaft rotates clockwise (CW). (The turbine shaft can also be driven by the lock up clutch when engaged). The "A" clutch and the "B" clutch are locked, this causes the rear input ring gear to be locked to the sun gear in the Simpson Gear set. The Simpson gear set is locked in a 1:1 ratio. The "F" clutch is locked which locks the sun gear in the auxiliary gear set to the case. The Simpson gear set drives the planetary carrier CW. The planet pinions walk around the fixed sun gear in a CW direction. This causes the ring gear to rotate CW as well. The ring gear, which is the output of the transmission is driven in a overdrive ratio.

Freewheel "H" and "K" are overrun. Freewheel "J" is not used.

POSITION GEAR	D				3			2		1	R
	1	2	3	4	1	2	3	1	2	1	R
Clutch A	X	X	X	X	X	X	X	X	X	X	
Clutch B			X	X			X				X

Reverse Gear

G03403766

Fig. 47: Identifying Power Flow Schematic - Reverse Gear
Courtesy of BMW OF NORTH AMERICA, INC.

Reverse Gear - Drive torque is applied to the torque converter impeller and transferred to the turbine. The turbine shaft rotates clockwise (CW). The "B" clutch is locked which drives the sun gear in the Simpson gear set CW. The sun gear drives the planet pinions CCW. The planetary carrier is held stationary by the "D" clutch. The planet pinions cause the front ring gear to rotate CCW. The front ring gear (and rear carrier) drive the

auxiliary gear set CCW which rotates at a ratio of 1:1 due to the "E" clutch locking the sun and ring gear of the auxiliary gear set.

Freewheel "H" and "J" are not used. Freewheel "K" is locked.

POSITION GEAR	D				3			2			1	R
	1	2	3	4	1	2	3	1	2	1	R

SHIFT CONTROL

Freewheel Shifting

In order to prevent an interruption in power flow, freewheel (One Way Clutches) are used to lock members of the planetary gear set. Certain transmissions such as the 4HP22/24, A4S270/310R and the A5S360R use freewheel shifting on all gear shifts. Transmissions such as A5S310Z, A5S440Z, A5S560Z and GA6HP26Z use freewheel shifting for only specific shifts. Other shifts in these transmissions use overlap shifting technology.

To demonstrate how the freewheel is used, we will examine freewheel "H" in the 4HP22/24 transmission.

In third gear, the sun gear is rotating clockwise. Freewheel "H" is overrun (unlocked) allowing the sun gear to rotate. Clutch "C" is active which locks the outer race of freewheel "H" to the case. During a 3/2 downshift, clutch "B" is released. The sun gear is held from rotating counter clockwise by freewheel "H" and the C' clutch. Freewheel "H" is used to stop the counter clockwise rotation of the sun gear before the C' clutch can engage. This prevents an interruption of power flow during the 3/2 downshift. If freewheel "H" fails to operate, there would be an increase in engine RPM from 3rd to 2nd gear.

Overlap Shift Control

Overlap shift technology is currently used on ZF transmissions. The A5S310Z, A5S440Z, A5S560Z and the GA6HP26Z use overlap shift technology on most gear changes. The advantages of this design allows for the reduction of the use of One Way Clutches (freewheel) and a significant improvement in shift quality.

During an overlap shift, the releasing clutch pressure is reduced at the same rate that the engaging clutch pressure is increased. The result is a smooth transfer or torque between gear ratios.

Fig. 51: Identifying Overlap Shift Technology
 Courtesy of BMW OF NORTH AMERICA, INC.

As shown in the diagram above, Clutch 1 is fully engaged with maximum pressure. Clutch 2 is fully released.

During overlap shifting, the TCM closely monitors the rotational speeds of the turbine (input) shaft and output shaft. The TCM then uses the EDS solenoids to control pressures during shifting to provide the optimum shift timing and overlap control.

Overlap Shifting

During the transition of overlap, the clutches run through a slip zone. The torque is gradually transferred from the clutch that is releasing to the clutch that is engaging.

Fig. 52: Identifying Overlap Shifting (Clutch 1 Partially Engaged And Clutch 2 Partially Disengaged)
 Courtesy of BMW OF NORTH AMERICA, INC.

The new gear engages the moment the torque level exceeds that of the first clutch. This is described as overlap. If the overlap is correct, (zero overlap) the engaging clutch takes over as much torque as the disengaging clutch releases. The result is a seemingly unnoticed shift of the best quality.

G03403772

Fig. 53: Identifying Overlap Shifting (Clutch 1 Disengaged And Clutch 2 Fully Engaged)
 Courtesy of BMW OF NORTH AMERICA, INC.

Negative Overlap

Negative overlap occurs when the engaging clutch takes over too late or the releasing clutch drops pressure too early.

The result is that the drive torque is briefly interrupted. When the engine is operating under load, the engine speed increases due to the interruption. When coasting the engine speed drops.

G03403773

Fig. 54: Identifying Negative Overlap
 Courtesy of BMW OF NORTH AMERICA, INC.

Positive Overlap

If positive overlap occurs, the engaging clutch takes over too early or the releasing clutch pressure drops too late. The gear set would become momentarily blocked if this condition occurs during an upshift. When this occurs the ratio of the gear set becomes 1:1 momentarily. The result is a loss in drive torque during a gear shift.

TRANSMISSION CONTROL MODULE

The TCM receives inputs, processes information and actuates the output elements to provide optimal shift points. The TCM is programmed for maximum shift comfort and fuel economy. The TCM on most BMW vehicles is located in the E-Box next to the ECM (DME).

There are several types of TCM housings:

- 35 Pin TCM (TCU) - used on the 4HP transmissions
- 55 Pin TCM used on the A4S310R (THM-R1)
- 88 Pin TCM used on all others up to 98
- 134 Pin TCM used on all BMW transmission from the 99 model year. (Note- the 134 pin TCM was introduced on the 98 Models equipped with the A5S440Z).

The 134 Pin TCM is also referred to as SKE (Standard Shell Construction). The SKE housing uses 5 separate connectors. On transmission applications only three connectors 1, 3 and 4) are used. Connectors 2 and 5 are blank and are NOT used. The connectors are blue in color to avoid confusion with the ECM (DME) connectors which are black.
